No. $\frac{2488\text{-}G}{2\text{-}IV\ Medl.}$ of 1895.

FROM

THE AGENT TO THE GOVERNOR-GENERAL, RAJPUTANA,

To

THE SECRETARY TO THE GOVERNMENT OF INDIA,
FOREIGN DEPARTMENT.

Dated Abu, the 21st June 1895.

SIR,

I have the honour to forward a copy of a letter, No. 1255, dated 3rd instant, from Surgeon-Lieutenant-Colonel A. Adams, Officiating Administrative Medical Officer in Rajputana, submitting his report for 1894 on dispensaries, jails, and sanitation in Rajputana and Ajmere-Merwara, and on vaccination for the official year 1894-95, together with a note reviewing the report.

I have the honour to be,

Sir,

Your most obedient servant,

H. B. ABBOTT, *Lieut.-Col.*,
Offg. Agent to the Governor-General.

Note on the Annual Report on the Sanitation, Dispensaries, and Jails of Rajputana for the year 1894, and on Vaccination for the official year 1894-95.

Rainfall.

1. The rainfall both in Ajmere-Merwara and in the Native States was above the average, though less than that of the previous year. The tanks and wells throughout the province were well supplied and there was no scarcity of water. Some of the crops in Marwar, Bikanir, Jaisalmir, and parts of

Jeypore suffered from the failure of the late rains; otherwise they were generally good. There is said to be an abundance of grain in the province, and the price of wheat and other food-grains has fallen to the rate which prevailed before the famine of 1891-92.

Vital Statistics.

The year generally was a healthy one.

Owing to the improved system of registration introduced last year, the birth-rate in the Ajmere Division rose from 23·14 to 32·23 per mille, and the death-rate from 23·30 to 31·02. The highest mortality was amongst children under five years, who suffered severely from malarial fever, which was prevalent throughout the cold season in consequence of the late and heavy rains of 1893, and accounted for 13,855 deaths against 9,961 in the previous year. Deaths from small-pox also rose from 75 in 1893 to 437 in the year under review. The system of registration by Girdawars and the Police introduced into the Ajmere Division last year appears to have worked well, and still better results may be anticipated in the future. Registration in Native States continues to be defective, although it was attempted in one State more than in the previous year—thus reducing the number of States which do not furnish statistics in some form or other to four, *viz.*, Kishengarh, Bundi, Dungarpore, and Kushalgarh of Banswara.

Though the statistics furnished by the various Native States generally show an improvement on previous years, they are still far from accurate and are mostly unreliable. The States are endeavouring to secure more accurate registration, but, with imperfect machinery and a rude population that resents enquiry into its domestic occurrences, progress must of a necessity be slow.

Cholera.

The year was absolutely free from cholera. There were no cases in Ajmere-Merwara, and only two doubtful cases in Marwar which proved fatal.

Sanitation.

The sanitary arrangements in Ajmere continue to work satisfactorily, and the water-supply is good and plentiful. Sanitation in Beawar receives the attention of the Municipal Committee, and the town is well kept. Rules for village sanitation in Ajmere-Merwara have been drawn up, and will shortly be promulgated throughout the district.

There has been considerable progress in some of the Native States in the matter of sanitation. Measures are being adopted by several of the States to improve the drainage of the cities and to provide good drinking water for the inhabitants. Village sanitation is progressing satisfactorily in Ulwar and is also receiving attention in Jeypore, where rules have been drawn up. It is to be hoped that the other States will soon follow their example in this matter, which appears to call for early attention.

Vaccination.

The results under this head are good and show an improvement on last year. In the Ajmere Division the number of primary vaccinations rose from 12,225 to 13,337, of which 98·80 per cent. were successful. Each vaccinator performed 1,113 operations, against 1,023 during the previous year, and the cost of each successful case fell from 25 to 23 pies. As there was an increase of about 1,100 in the number of primary vaccinations, so also was there a slight increase in the total expenditure, *viz.*, ₹1,610, against ₹1,590. In Native States there was also an increase in the number of primary vaccinations, which rose from 2,41,841 to 2,62,100, and the cost of each successful case fell from 20 to 19 pies. Marwar still stands at the head of the list in the number of primary vaccinations, *viz.*, 75,753, of which 99·26 per cent. were successful, followed by Jeypore, Bikanir, and Ulwar, where excellent results were also obtained. The percentage of success was highest in the State last mentioned. The total expenditure

under this head amounted during the year to ₹27,242, of which ₹1,610 was spent in the Ajmere Division and ₹25,632 in Native States. The expenditure in the preceding year was slightly less, *viz.*, ₹27,006.

Dispensaries.

There were 144 medical institutions in the province during the year, against 138 in 1893. Six dispensaries were opened during the year—one at Phalodi in Marwar, one each at Mandalgarh and Maoli in Meywar, the Walter Female Hospital at Tonk and two in the Bhurtpore State (one for females at the Capital and the other at Kumher). The Kotra Agency Hospital and the palace dispensary at Bikanir, which had not been hitherto recognised, have also been brought on to the list of medical institutions. Two dispensaries were closed during the year, *viz.*, a temporary Public Works Department dispensary at Chaparwara in Jeypore, and the female hospital at Karauli. The latter has been closed temporarily for want of a female practitioner to take charge of it. It is hoped that the two remaining Meywar dispensaries, which were closed in 1891, will be re-opened shortly, and several other dispensaries and hospitals are under construction and will, it is expected, be opened during the present year.

In the Ajmere Division there were 811 in-door and 54,981 out-door patients treated during the year, against 817 and 59,171 in 1893, the decrease being accounted for by a somewhat healthier season. In the twelve Agency and salt dispensaries 670 in-door and 19,574 out-door patients were treated, against 829 and 19,439 during the previous year, whereas in the Native States' dispensaries the corresponding figures rose from 11,988 and 765,426 to 13,156 and 836,630, respectively. The increase in the figures for the Native States' dispensaries is due mainly to the opening of new institutions during the year.

In Ajmere malarial fevers and spleen diseases accounted, as in the previous year, for a large percentage of the admissions, while diseases of the lungs and respiratory organs were most fatal in all the dispensaries and hospitals both in Ajmere and the Native States. Of the total number of cases treated throughout the province, 23 per cent. in Ajmere-Merwara, 29 per cent. in the Agency and salt dispensaries and 18 per cent. in the Native States' institutions were due to malarial fevers and spleen, against 32·36 and 21 per cent., respectively, in 1893, with a death-rate of 7·15 and 9 per cent. among in-door patients, the corresponding percentages for the previous year being 16, 8, and 9. On the whole, however, malarial fevers are said to have been less prevalent and fatal than during the previous year.

The system of selling quinine through Post Offices and village schools was introduced in the province towards the end of the year under review, but it is yet too early to pronounce an opinion as to the success or otherwise of the scheme.

The mortality from lung diseases rose by 15 and 4 per cent. in Ajmere-Merwara and the Native States, respectively, and fell by 9 per cent. in the Agency and salt dispensaries, the number of cases treated being about the same as in the previous year. The mortality from diarrhœa and dysentery also rose in Ajmere-Merwara and the Native States by 7 and 4 per cent., respectively, whereas there were no deaths from these complaints in the Agency and salt dispensaries.

There were 789 cases of leprosy treated during the year, against 907 in 1893, a satisfactory falling off.

The number of major operations performed in Ajmere-Merwara and the Native States fell from 231 and 2,077 to 171 and 1,932, respectively; there was, however, a decrease in the number of deaths after operations which, in the case of Native States, fell from 44 to 29.

Expenditure.

The total expenditure on the up-keep of the dispensaries in Ajmere-Merwara amounted to R17,294 and in the Native States to R2,41,744, against R9,433 and R2,11,467, respectively, during 1893. The increased expenditure in Ajmere-Merwara is due principally to a sum of R5,080 having been paid for a new hospital to replace the old Ajmere dispensary which has been condemned, whereas the increase in Native States is due to a large number of institutions and also to loss by exchange on the cost of Europe medicines. In the Agency and salt dispensaries the expenditure amounted to R11,074, compared with R10,997 the previous year.

In reviewing the report for 1893 the Government of India remarked that the charges for compounders, dressers, and menial servants appeared excessive, and suggested that hospital assistants might, in some cases themselves, do the work of compounders and ward servants, while one man could often conveniently perform the duties of chowkidar and bhisti in addition to those of ward coolie. This question is discussed in paragraphs 107 to 110 of the present report, and I agree with Dr. Adams in thinking that, for the reasons given, no reduction of establishment on the lines indicated by the Government of India is possible.

Jails.

The daily average number of prisoners in the Ajmere Jail fell from 337 to 333 when compared with the previous year. The number of admissions to hospitals rose from 88 to 98, and the number of deaths from four to six. The average daily sick, however, fell from 5·20 to 4·66, while the death-rate rose from 11·87 to 18·01 per mille. There was no overcrowding at this jail. Returns were received from seventeen Native State jails, against fourteen for last year. The daily average number of prisoners at these jails was 4,383, compared with 4,558 in 1893, the admissions to hospital rose from 5,820 to 5,869,* the average daily sick fell from 151·01 to 144·03, the deaths from 146 to 124, and the death-rate from 32·03 to 28·29 per mille. The death-rates rose at the Bikanir, Ulwar, Kotah, and Sirohi Jails, whereas at Shahpura it fell from 73·76 per mille in 1893 to nothing in the year under report. There was overcrowding at the Oodeypore, Karauli, and Jhallawar jails, the last named of which is reported to be in a very unsatisfactory state. The new jail at Jodhpore, which was under construction last year, has been completed, and is said to be one of the finest in the province, and an improvement has also, it is satisfactory to note, been made in the Bhurtpore Jail. Nothing has, however, it is to be regretted, been done to improve the Banswara Jail, which is in an unhealthy locality, and at which the death-rate reached the unusually high figure of 106·35 per mille. In other respects the report under review shows an improvement on previous years.

* (In these are included the number under treatment on the 31st December 1893.)

Female hospitals and medical education of women.

Miss Campbell, a medically qualified Superintendent, has been appointed to the Mission Female Dispensary at Ajmere, and Miss Young still continues to do much useful work. Hospital Assistant Bibi Ashrafi, from Karauli, has been appointed to the female dispensary at Beawar, which has been long closed, and the dispensary at Karauli has had in consequence to be temporarily closed for the want of a female practitioner. Miss Crowley succeeded Miss Hannan at the Dufferin Hospital at Ulwar and is assisted by two qualified female practitioners from Agra. The Walter Female Hospital at Oodeypore continued throughout the year in charge of Mrs. Lonorgan, who, however, I regret to say, died on the 7th of May last. Miss B. B. Bose, M.B., is doing good work at the Walter Hospital at Tonk, which was opened last June. The Victoria Hospital at

Kotah is still in sole charge of Miss Bessie Karimullah, who is also doing good work. Two female practitioners are employed at the Mayo Hospital, Jeypore, under the Residency Surgeon, and a qualified female practitioner has also opened a female hospital in the Bhurtpore city. A female practitioner was appointed to the Hewson Hospital at Jodhpore, but she left, and endeavours are being made to replace her. Mrs. Ives is still in charge of His Highness the Maharao of Sirohi's family.

Female education is said to be backward in the Rajputana States, and great difficulty is experienced in obtaining local candidates. Other provinces will, it is feared, have to be indented on for a supply of qualified female practitioners.

Inspection.—Surgeon-Lieutenant-Colonel A. Adams, who officiated as Residency Surgeon and Chief Medical Officer,* has been energetic and has inspected most of the medical institutions and jails in the province during the year, and has communicated his remarks and suggestions to the officers and States concerned.

* An appointment the designation of which was, with effect from the 29th March last, changed to Administrative Medical Officer.

H. B. ABBOTT, *Lieut.-Col.*,
Offg. Agent to the Governor-General.

MOUNT ABU,
Dated 21st June 1895.

No. 1255, dated the 3rd June 1895.

From—The Offg. Administrative Medical Officer in Rajputana,

To —The First Assistant Agent to the Governor-General, Rajputana.

I have the honour to submit the Annual Report on Sanitation, Dispensaries, and Jails in Rajputana for the year 1894, and on Vaccination for the official year 1894-95.

Mortuary Statements I to X.
Vaccination Statements I to V.
Comparative Statement of Small-pox and Vaccination.
Dispensary Statements I, II, III, III A, Supplement III A, IV, V, Parts I and II.
Jail Statements III, X, XIII, XIV, and XV.

2. The statements named in the margin are appended.

3. Attention has frequently been invited by my predecessors and myself to the overworked and underpaid condition of my office here.

4. The abolition of the appointment of Residency Surgeon and Chief Medical Officer has now thrown the administration of the Medical Department in Rajputana on a medical officer occupied with a very important executive charge, and it will not be possible for him to discharge the dual duties efficiently, unless the office be improved and strengthened.

5. Returns and reports from Native States increase considerably every year, and no provision has been made in this office for checking these and carrying on the correspondence entailed by the opening of many new dispensaries, the reform of jails, and the advance of vaccination.

REPORT

ON

THE ADMINISTRATION OF RAJPUTANA

(SANITARY, VACCINATION, DISPENSARY, AND JAIL)

FOR

1894.

SECTION 1.—SANITATION AND VACCINATION.

METEOROLOGY.

TABLE 1.—*Rainfall of Ajmere.*

YEAR.	INCHES.			
	January to May.	June to September.	October to December.	TOTAL.
1894	1·24	23·44	2·31	26·99
Average of previous six years . .	2·25	17·81	0·96	21·02

The rainfall in Ajmere-Merwara was above the average, although less than that of the previous year. At Ajmere 26·99 inches were registered, against an average of 21·02, and at Beawar 23·70 inches, against 27·50 in 1893.

2. The Foy Sagar, the principal storage tank for Ajmere city, did not entirely fill; there is, however, a year's supply in it, and there is abundance of water throughout the Ajmere-Merwara district.

3. In Native States the rainfall has been somewhat above the average, though in most of these below that of 1893. In Marwar, Bikanir, Jaisalmir, and parts of Jeypore the early monsoon was very heavy, while the late rains almost failed, and some of the crops suffered in consequence. There is, however, no unusual scarcity of drinking water in these districts, as the wells were well raised by the early fall and many of the tanks completely filled.

TABLE 2.

YEAR.	RAINFALL.	AVERAGE PRICE OF WHEAT IN THE AJMERE DIVISION PER RUPEE.		Death-rate per thousand of population.
	Inches.	Seers.	Chittacks.	
1890	14	14	6	22
1891	8	12	8	20
1892	20	12	10	41
1893	32	12	13	23
1894	26	14	1	31

4. Wheat and food stuffs have fallen to the prices which ranged before the famine of 1891-92; the crops have been generally good, except in a few of the desert districts, and there is abundance of grain in the province.

VITAL STATISTICS.

TABLE 3.—*Birth-rate of population of the Ajmere Division.*

STATEMENT I.

YEAR.	POPULATION.			BIRTHS REGISTERED.			BIRTHS TO 1,000 LIVING.		
	Male.	Female.	Total.	Male.	Female	Total.	Male.	Female.	Total.
1893 . .	288,325	254,033	542,358	6,915	5,635	12,550	12·75	10·39	23·14
1894 . .	288,325	254,033	542,358	9,393	8,086	17,479	17·32	14·91	32·23

5. There were 17,479 births registered in the Ajmere Division, against 12,550 in 1893, and the birth-rate rose from 23·14 to 32·23 per mille. Of the births registered, 9,393 were males and 8,086 females. These figures show a marked improvement, when compared with those of previous years, and are due to the improved system of registration introduced last year.

TABLE 4.—*Death-rate of population of the Ajmere Division.*

STATEMENTS II TO X.

YEAR.	DEATH-RATE PER THOUSAND OF POPULATION PER ANNUM.														PERCENTAGE AMONG TOTAL DEATHS.									
		SEX.		SEASON.				CAUSES.							AGE.									
				Quarters of the year.																				
	Total.	Male.	Female.	First.	Second.	Third.	Fourth.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	Under 1 year.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 30.	30 and under 40.	40 and under 50.	50 and under 60.	60 and upwards.
1893 .	23·30	23·39	23·20	21·96	12·44	22·48	36·32	·01	·14	18·37	1·40	·61	2·79	20	15	5	3	4	9	10	11	12	11
1894 .	31·02	31·44	30·55	44·96	27·76	24·56	26·80	...	·80	25·54	·93	·57	3·16	25	18	5	2	3	8	9	10	11	9

6. In this division 16,825 deaths were registered during the year, and the death-rate rose by improved registration from 23·30 to 31·02 per mille. The first quarter was the most fatal, and the highest mortality was among children under five years. On account of the late and heavy monsoon of 1893 malarial fever was prevalent throughout the cold season, and in January and February 1894 children suffered severely from this disease.

7. The deaths slightly exceeded the births in 10 out of 23 circles of registration, and this unsatisfactory condition was more marked in towns than in rural circles, concealments being more easily effected in the latter.

8. Although there has been great progress made in the registration of vital statistics in this division during recent years there are still some defects; however, it is hoped that the supervision by Girdawars and Police, introduced last year, will be attended by even better results in the future than those already accomplished, and accurate returns will shortly be obtained.

TABLE 5.—*Deaths according to Diseases in the Ajmere Division.*

STATEMENT VI.

YEAR.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	TOTAL.
1893 . . .	3	75	9,961	754	330	1,514	12,637
1894 . . .	...	437	13,855	506	310	1,717	16,825

9. This table shows the deaths according to diseases in the Ajmere Division. There were 4,188 more deaths than in 1893, and this increase in mortality was mainly due to fevers, which rose from 9,961 to 13,855. Both diarrhœa and dysentery were less fatal than in the previous year, and there was no death from cholera, but small-pox gave rise to 437 deaths against 75 in 1893.

TABLE 6.—*Quarterly deaths from Cholera and Small-pox in the Ajmere Division.*

STATEMENTS VII AND VIII.

	Quarters of the Year.				Total.
	First.	Second.	Third.	Fourth.	
Cholera	...	...	...	...	...
Small-pox	228	188	19	2	437

10. The above table shows the deaths from cholera and small-pox in the Ajmere Division. No cholera was reported during 1894, but there were cases of small-pox throughout the year, and it was most fatal in the first quarter.

TABLE 7.—*Births and Deaths in Native States.*

Name.	Population according to Census of 1891.	Births.				Deaths.								
		Male.	Female.	Total.	Ratio per 1,000 of population.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Snake-bite.	Injuries.	All others.	Total.	Ratio per 1,000 of population.
1	2	3	4	5	6	7	8	9	10	11	12	13	14	15

Shahpura (State)	63,646	461	364	825	12·96	...	...	46	358	5	2	126	537	8·44
TOTAL	3,088,681	31,564	25,612	57,176	18·51	...	2,281	30,036	4,683	193	363	11,676	50,719	16·42

NOTE.—The information required for this table cannot be obtained in full from Jaisalmir. The total, therefore, of column 14 does not agree with the total of the seven preceding columns.

11. The above table shows the births and deaths that have been registered in Native States. Registration has been attempted in sixteen States, one more than in the previous year, and there are now only three small States which do not furnish these returns in some form, *viz.*, Kishengarh, Bundi, and Dungarpore.

These States are equally behind the times in jail and dispensary statistics.

12. Many of the above figures are obviously incorrect, and are of no value as statistics; however, some of the returns show an improvement, when compared with those hitherto received, and endeavours are being made to secure more accurate registration in Native States.

13. The great ignorance and the many prejudices of the people have to be contended with, many of the tribes in the desert regions are semi-nomadic, and the population of the hilly tracts is extremely wild; rapid progress need not therefore be expected with such material to work upon. Moreover, the machinery for the registration of vital statistics in Native States is still far from perfect, and Darbar officials do not rapidly adopt occidental innovations which entail much labour and have no compensating advantages.

TABLE 8.—*Number of Cholera cases reported in Ajmere-Merwara and in Native States at the end of the year.*

NAME.	MARCH.		TOTAL.		Percentage of deaths to cases.
	Cases.	Deaths.	Cases.	Deaths.	
Marwar	2	2	2	2	100

14. This shows the cases and deaths from cholera in Ajmere-Merwara and in Native States. The year was all but free from this disease; only two cases were reported: they occurred in Marwar in March, and were most probably due to unwholesome food or poison. No particulars beyond the fatal termination of these two cases have been furnished by the village official who reported them, and they could not have been true cholera.

CHOLERA MAP.

15. As only two doubtful cases of cholera were reported in Rajputana during the year 1894, a cholera map is not appended.

SANITATION.

16. *Ajmere Division.*—The Foy Sagar continues to furnish Ajmere with an abundant supply of good drinking water distributed by pipes throughout the city and suburbs. The city people have thrown over all prejudices regarding pipe-water; it is now in general use, and guinea-worm has become less prevalent in consequence.

17. The sanitary tramway and other conservancy arrangements for Ajmere continue to work satisfactorily: the trenching-ground has been well looked after throughout the year; refuse water is collected in the streets and carted away from the city; the slaughter-house has been flagged, and many of the objectionable huts have been removed from the Nasirabad road. Well-built lines have taken the place of these unsightly huts, and the sanitary condition of this locality has been much improved.

18. The sanitation of Beawar receives the attention of the Municipal Committee, and the town is well kept. The Raigor tanneries, which have been a nuisance for a long time, have now been removed to a distance beyond the town, and this will benefit the public health.

19. Rules for village sanitation in Ajmere-Merwara have been drawn up, and they will be applied as early as possible by the local authorities.

NATIVE STATES.

20. *Jodhpore.*—Much progress has been made in sanitation in the city of Jodhpore during recent years, and a light steam-tramway will now be constructed to remove all *dèbris* to the required distance beyond the city walls. A large tank is under construction a few miles from this city, which will

contain an ample supply of good drinking water for the entire population, and it is proposed to distribute it throughout the city and suburbs by pipes. Pali and a few of the large towns in Marwar have lately made some progress in sanitation, and it is hoped that general village sanitation will shortly receive the attention of the authorities.

21. *Jeypore.*—Sanitation in the city of Jeypore continues to progress satisfactorily, and it is now proposed to give the Municipal Committee greater powers and increased responsibilities, an encouragement which must be followed by good results. The Sanitary Committee have completed their rules for village sanitation, and a new department under an Assistant Surgeon and an Inspector is to be formed. All villages are to be inspected and advised in sanitary matters, but attention is first to be particularly directed to the protection of drinking water, surface drainage, the proper location of manure heaps, and general cleanliness. Reform is to be gradual, and a well organised department working on these lines must produce excellent results in a very few years.

22. *Oodeypore.*—Although there is no attempt to introduce the modern appliances of sanitary science here, the city of Oodeypore is fairly clean; its natural position is such that it gets thoroughly washed during the monsoon season, and the citizens pay some attention to the cleansing of their surroundings.

23. *Ulwar.*—The Municipal Committee of Ulwar continues to take a deep interest in sanitary matters; the city and suburbs are well kept, new and improved latrines have been built, and the drainage of the city improved during the year. Village sanitation is progressing in that State, and Municipal Committees have been established in some of the large towns, with the local Hospital Assistants as members and advisers in sanitary matters.

24. *Bikanir.*—The city of Bikanir is well looked after; new latrines have been erected during the year under report, and many insanitary structures demolished; the fort and palace have been much improved in this direction, and a scheme for better drainage is under consideration; also a railway to remove the city refuse to a proper distance. The numerous dogs which infested the city have been shut up and the sexes separated, a move which will do much to lessen hydrophobia.

25. *Kotah.*—The city of Kotah is clean and well cared for, and it is proposed to bring in a supply of good drinking water, as that at present in use is very inferior. Village sanitation in this State calls for more attention.

26. *Karauli.*—The city of Karauli is a model of cleanliness, and the members of the Municipal Committee there deserve every commendation.

27. *Jhallawar.*—In order to economise, a reduction in the sanitary staff at Jhalrapatan has been made; this retrograde step is greatly to be regretted, especially as the original establishment was below the requirements. The Chaoni distillery, which has been a public nuisance of long standing, has now been removed to a distance beyond the town.

28. *Bhurtpore.*—A scheme for the drainage of Bhurtpore city is under consideration, and this is much needed, as it is so water-logged and malarious that it is becoming deserted.

29. Some progress is now being made in sanitation throughout these States, and it is becoming generally recognised that public health should no longer be wholly neglected; there is still, however, much to be accomplished in this direction, even in the most advanced States, and village sanitation calls for immediate attention.

VACCINATION.

TABLE 9.—*Abstract of Statements I and II.*

		Average number of Vaccinators.	Primary Vaccination.			Re-vaccination.			Cost.		Average number of operations by each Vaccinator.
			Total.	Successful.	Percentage.	Total.	Successful.	Percentage.	Total.	Per successful case.	
										Pies.	
Ajmere Division	1893-94 .	12	12,225	12,085	98·85	51	31	60·78	1,590	25	1,023
	1894-95 .	12	13,337	13,177	98·80	19	10	52·63	1,610	23	1,113
Native States	1893-94 .	197	241,841	236,798	97·91	1,529	978	63·96	25,416	20	1,235
	1894-95 .	200	262,100	258,123	98·48	560	296	52·86	25,632	19	1,313

30. In the Ajmere Division the primary vaccinations rose from 12,225 to 13,337, and 98·80 per cent. of these were successful.

31. The average number of operations performed by each vaccinator rose from 1,023 to 1,113, but there was a slight increase in expenditure, *viz.*, ₹1,610, against ₹1,590; in the previous year, however, the cost of each successful case fell from 25 to 23 pies.

32. Of the work inspected by the Civil Surgeon, 99·02 per cent. was found successful, and of that inspected by the Native Superintendent, 98·52 per cent. These results are very satisfactory, and much progress in vaccination is being made in this division.

33. As in the previous year, twelve vaccinators were employed in Ajmere-Merwara.

34. Only ten successful re-vaccinations were performed in this division, against thirty-one in 1893-94.

35. In Native States there was also a considerable increase in the primary vaccinations performed, *viz.*, from 241,841 to 262,100. The percentage of success also rose from 97·91 to 98·48.

36. The average number of vaccinations performed by each vaccinator rose from 1,235 to 1,313, and the expenditure from ₹25,416 to ₹25,632, but the cost of each successful case fell from 20 to 19 pies.

37. Of the work inspected by Residency and Agency Surgeons, 98·66 per cent. was found successful, and of that inspected by Native Superintendents 97·78.

38. In these States 200 vaccinators were employed, against 197 in 1893. There was an increase of seven in Jeypore, three in Kotah, two in Jhallawar, one in Bikanir and one in Pertabgarh. There was a reduction of nine in Marwar and of two in Meywar.

39. Re-vaccination is not making any progress in these States, as the people hold that one vaccination, like one attack of small-pox, should be a sufficient protection, and it is very difficult to persuade them to subject their children to a second operation. Only 296 successful re-vaccinations were performed during the year under report.

40. Doctor Thomas ffrench-Mullen's vaccinations in the Western Rajputana States stands far ahead of all the other work; in Marwar 75,753 vaccinations were performed, with a success of 99·26 per cent., and vaccination in Jaisalmir has made excellent progress within the last two years. The reduction in the number of vaccinators in Marwar will be remedied at the beginning of the vaccination season, as it has been found that a larger proportion of vaccinators to population is required in the desert, where the distances between villages are great, than in the more densely populated districts.

41. In Jeypore, which stands second in numbers, 52,398 persons were vaccinated, with a successful percentage of 99·69, and this is a very satisfactory increase on the work of the previous year.

42. Bikanir takes third place in point of numbers vaccinated; 28,177 primary vaccinations were performed in this State, 99·71 per cent. of which were successful.

43. In Ulwar 25,775 primary vaccinations were performed, of which 99·98 per cent. were successful; this is the highest per cent. of success shown, and there were more re-vaccinations done in this than in any other State.

44. In Meywar the successful primary vaccinations rose from 15,285 to 19,507, in Kotah from 9,457 to 12,323, and in Bhurtpore from 11,521 to 12,262.

45. Vaccination has been commenced in Pertabgarh, but it is still neglected in Kishengarh, Dungarpore, and Kushalgarh; however, endeavours are being made to start it in these backward places, and it is hoped something will be done next cold weather.

TABLE 10.—*Verification of Returns of Vaccination.*

Name of district or State.	Superintendent and Native Superintendent.	Number of towns and villages visited.	Successful cases seen.				Unsuccessful cases seen.	Total number seen. * The Staff Surgeon at Nasirabad performed the duties of Superintendent.

† The Residency Surgeon, Western Rajputana States, also supervises the operations in the Jaisalmir State.

‡ The services of Hospital Assistants were utilised for a short time as Native Superintendents.

INSPECTIONS BY MEDICAL OFFICERS.

46. The Agency Surgeon, Ulwar, inspected 9,389 cases, and of these 99·25 per cent. had been successfully vaccinated; the Residency Surgeon, Jeypore, inspected 5,957 cases, and found 99·61 per cent. successfully vaccinated. The Agency Surgeon, Bikanir, inspected 4,631 cases, and found 99·09 per cent. successfully vaccinated; the Residency Surgeon, Meywar, inspected 3,379 vaccinations

and found 99·17 per cent. successful; the Agency Surgeon, Kotah and Jhallawar, inspected 5,152 vaccinations in both States, and found 95·91 and 94·85 per cent. successful, respectively; the Residency Surgeon, Western Rajputana States, inspected 2,073* vaccinations in Marwar and 50 in Jaisalmir, and found 99·10 and 98·00 per cent. successful.

47. Statement No. V of vaccination is given for the first time, and it shows the results of inspection by Residency, Agency, and Civil Surgeons, and by Native Superintendents and other Inspecting Officers.

48. The Officiating Residency Surgeon and Chief Medical Officer inspected vaccination in Ajmere-Merwara and in all Native States where vaccinators are employed, expect Jaisalmir; he found most of the work excellent, and there is every reason to be satisfied with the progress which has been made during the past year both in Ajmere-Merwara and in most of the Native States of Rajputana.

49. Vaccination in Ulwar is still carried on by lymph obtained by vaccinating buffalo calves, and excellent results have been obtained from this method. It obviates the great difficulty often experienced in obtaining lymph from children, and assures a good supply at any season. When Surgeon-Major-General Rice was at Ulwar, I showed him a great many children who had been vaccinated with this lymph, and he was well satisfied with the results.

50. It will be seen from a comparative statement of deaths from small-pox and vaccination done in Ajmere-Merwara, which is appended, that the inhabitants of Ajmere town have suffered considerably from fatal small-pox, as in 1893; in a previous report I pointed out that there has always been great difficulty in carrying out vaccination in this town on account of the close purdah system which exists there. Pisangan town and rural circle have both suffered severely from fatal small-pox, and I find that vaccination has till recently been greatly neglected in these places, and that there is still much difficulty in getting the young population of the town protected.

51. Nasirabad, Beawar, and Goella have been well looked after in the matter of vaccination for several seasons, and they have escaped fatal small-pox two years in succession, although the disease has prevailed in the surrounding country.

52. Jasakhera which had not been reached by the vaccinators in 1894-95, before the submission of their annual returns, suffered somewhat from fatal small-pox although there had been a good deal of work done in this district during the vaccination season of 1893-94.

53. The Municipal Committee of Ajmere have now passed a compulsory Vaccination Act which will do much to check the frequent ravages of small-pox in that city.

SECTION II.—DISPENSARIES.

54. During the year under report the hospitals and dispensaries in Rajputana increased from 138 to 144, and the new institutions are all supported by Native States.

55. In Ajmere-Merwara there were seven dispensaries open, as in the previous year, and the four Northern India Salt Revenue Department dispensaries remained as before. The Kotra Agency Hospital has been added to the list; also the palace dispensary at Bikanir, which has not hitherto been recognised, or returns received from it. A new dispensary has been opened at Phalodi in Marwar; one of the dispensaries abolished in Meywar by the School and Dispensary Committee was re-opened at Mandalgurh by the Darbar after the abolition of that body, and another Meywar dispensary was opened at

* Of these 1,669 were new vaccinations.

Maoli for the construction coolies on the new railway between Chitor and Oodeypore.

56. The Walter Female Hospital at Tonk was opened early in the year by Miss Bose, M.B., and a Female dispensary was opened in Bhurtpore City under an Agra qualified female Hospital Assistant. The Bhurtpore Durbar also opened a new out-dispensary at Kumher, which supplies a long-felt want in that part of the State.

57. Two dispensaries were closed during the year under report, *viz.*, a temporary Public Works Department dispensary at Chaparwara in Jeypore, and the Karauli Female Dispensary, temporarily, from want of a female practitioner to carry on the duties.

58. The Lansdowne Hospital, Oodeypore, has been open the greater part of the year ; it is one of the finest hospitals in Rajputana and a great improvement on the Sujjan Dispensary in Oodeypore city, the place of which it has taken there.

59. It is hoped the other two dispensaries closed in Meywar in 1891, by the School and Dispensary Committee, will be re-opened during the present year by the Darbar.

60. Another new dispensary will shortly be opened in Marwar in the Bali district ; a new jail dispensary is now ready, and the second branch dispensary at Jodhpore, formerly used for prisoners, is about to be re-built and made over wholly for the treatment of city patients. The Pertabgarh Darbar proposes to open a second dispensary in that State. The civil dispensary at Sambhar is being re-built by the Jeypore Darbar ; the female dispensary at Beawar is about to be re-opened, and it is hoped the Karauli Female Dispensary will not be long closed.

61. The new Ajmere Hospital is approaching completion, and will be open for the treatment of patients before the end of the financial year. It is a well-planned, well-located building, and will be a great boon to the sick poor of Ajmere who have hitherto had to put up with an insanitary building in a crowded part of the city.

62. The sale of quinine at all Post offices in Rajputana and also at village schools in Ajmere-Merwara was commenced late in 1894. The drug is purchased in packages of made-up doses of five grains from the Superintendent, Jail Manufactures, Calcutta, and distributed by the Medical Officers as required at the Post offices. A permanent advance of two packages has been made to each Post Office. It is too soon to express an opinion on the success or otherwise of this scheme ; no large sales have been effected ; however, there has not yet been time for it to become generally known that quinine can be had in such a way.

TABLE 11.—*Cases and Deaths.*

STATEMENT II.

		Cases treated.		Daily average.		Average duration.		Percentage of in-door in total cases.	Deaths.	
		In-door.	Out-door.	In-door.	Out-door.	In-door residence.	Out-door visits.		In-door.	Percentage to cases in-door.
Ajmere Division	1893	817	59,171	34·65	374·33	15	2	1	76	9
	1894	811	54,981	29·36	355·32	13	2	1	122	15
Agency Hospital and Salt Dispensaries.	1893	829	19,439	26·56	257·97	11	4	4	13	1
	1894	670	19,574	30·95	272·93	16	5	3	20	2
Native States	1893	11,988	765,426	506·06	6,991·41	15	3	1	374	3
	1894	13,156	836,630	554·68	7,603·56	15	3	1	398	3

63. The above table shows the cases treated and deaths in all dispensaries, and allows of comparison with the previous year.

64. In the Ajmere Division 811 in-door and 54,981 out-door patients were treated at the dispensaries, against 817 and 59,171 in- and out-door in 1893. The year under report was somewhat healthier than the previous year, and this would be sufficient to account for the slightly diminished attendance at the dispensaries.

65. In the twelve Agency and Salt dispensaries 670 in-door and 19,574 out-door patients were treated, against 829 and 19,439 in-and out-door in the previous year. The in-door patients in these dispensaries were Government servants, and, as those employed in the various departments remain much the same in strength from year to year, the falling off here merely indicates a healthier season. The considerable increase in the out-door attendance under the above heading was principally due to the extra dispensary included, *viz.*, Kotra.

66. In the hospitals and dispensaries of Native States 13,156 in-door and 836,630 out-door patients were treated, against 11,988 and 765,426 in-and out-door in the previous year. This increase has been mainly caused by the opening of new institutions; however, there has been a satisfactory increase of attendance at many of the old dispensaries and hospitals, which is an indication of their becoming more resorted to for medical relief as they become better known to the villagers.

67. The deaths among in-door patients were more than in the previous year, and this was marked in Ajmere-Merwara, where lung diseases and dysentery were more fatal than in 1893.

TABLE 12.—*Causes of Admissions and Deaths.*

STATEMENT III.

		PERCENTAGE OF TOTAL CASES AND DEATHS.									
		Malarial fevers and spleen.	Cholera.	Rheumatism.	Diseases of the eye.	Lungs and respiratory diseases.	Diarrhœa and dysentery.	Ulcer.	Skin diseases.	Injuries.	All others.

	1894	15	...	...	...	45	...	...	...	5	35
Native States	1893	9	...	1	...	19	17	5	80	8	40
	1894	9	...	1	...	23	21	5	·50	8	32

68. The above table shows the causes of admissions of both in-and out-door patients and of deaths among in-door.

69. Malarial fevers and spleen diseases were, as usual, responsible for a high percentage of the admissions, as in previous years, while lung and respiratory diseases were most fatal in all hospitals and dispensaries.

70. Of the total treated, 26 per cent. were due to malarial fevers and spleen in Ajmere-Merwara, 29 in Agency and Salt dispensaries, and 18 in Native States institutions, against 32, 36, and 21 in 1893. Of deaths among in-door patients, 7 per cent. were due to malarial fevers and spleen in Ajmere-Merwara, 15 in Agency and Salt dispensaries, and 9 in Native States, against 16, 8, and 9 per cent. in the previous year.

71. The excessive mortality from these causes shown under Agency and Salt dispensaries was due to a total of three deaths from malarial fevers in the 12 dispensaries, and the figures need not be considered when dealing with the much greater numbers of admissions in the other institutions, as they give an erroneous idea of the season.

72. Malarial fevers were less prevalent and less fatal on the whole than in the previous year, notwithstanding the high percentage of mortality shown against Agency and Salt dispensaries from these causes.

73. In the dispensaries of Ajmere-Merwara lung and respiratory diseases gave rise to 1 per cent. more of those treated than in the previous year, while in the other institutions the percentage of these ailments was the same as in 1893. The mortality from lung diseases rose 15 and 4 per cent. in Ajmere-Merwara and Native States, respectively, and fell 9 per cent. in Agency and Salt dispensaries.

74. The percentage of treated for diarrhœa and dysentery was the same throughout, as in the previous year, but the mortality among these cases was 7 per cent. higher in Ajmere-Merwara and 4 per cent. higher in Native States than in 1893. There was no death from diarrhœa or dysentery in Agency and Salt dispensaries against a mortality of 15 per cent. in the previous year.

75. More patients were treated for ulcers, skin diseases, and trivial affections of this sort than in the previous year, and rheumatic affections were much as in 1893.

76. The percentage of those treated for eye affections was much as before, also for injuries, and the mortality from the latter fell from 10 to 2 per cent. in Ajmere-Merwara, and rose to 5 per cent. in Agency and Salt dispensaries, while it remained at 8 per cent., as in the previous year in Native States.

TABLE 13.—*Cases of Leprosy treated in the Dispensaries of Rajputana.*

Native States . . .	102	700	106	697	114	726	117	659	120	812	125	754
TOTAL .	109	767	113	764	121	805	135	758	138	907	144	789

77. The above table shows the cases of leprosy treated during the last six years, and there is a falling off in the number of sufferers from this disease notwithstanding the great increase in dispensaries.

78. Dr. Milton's treatment has not been found very successful since its introduction; it has given temporary relief in many mild cases in which it has been tried; however, no permanent cure has been effected, and it is, like many other supposed specifics for this dire malady, only a palliative remedy.

79. Treatment of snake poisoning by strychnia, as recommended by Dr. Mueller, of Victoria.

During the last two years the treatment of snake poisoning by hypodermic injection of strychnia has been carried out in the dispensaries of these States as opportunity has offered. Twenty-three cases of recovery from snake-bite have been reported, but 16 of these were from Pachbadra, an unreliable source, and in only two of the whole is there valid evidence that the snakes were killed and identified on the spot.

80. One of the snakes recognised was a small viper, the bite of which is rarely deadly even when treatment is not attempted; the other was a cobra which was killed while holding on to a boy's foot. The latter case was reported by Dr. Woolbert, of Deoli, but the treatment was carried out by one of his subordinates during his absence from the station. The boy was taken to the hospital, and a quarter of a grain of strychnia hypodermically injected in three doses; stimulants were also given by the mouth, but he made no attempt to rally, and died within two hours of the time he had been bitten.

81. This was an unusual opportunity of testing the strychnia treatment in the human subject, and Dr. Mueller claims a special antidotal action for the drug in man which it does not possess when injected into animals under the influence of snake poison. The effects were in this case identical with what has been observed in animals under similar conditions, *viz.*, negative.

82. The cases recorded as cured, in which the snake was not found, cannot be taken to prove anything, as many of the bitten who survive till they reach the hospitals have absorbed such small doses of the poison that they would recover under any of the recognised methods of treatment, and some of them without any medical aid.

83. Although strychnia is a powerful stimulant and seems to act beneficially as such in some of the less virulent forms of snake poisoning, there are yet no reliable data from its application in the dispensaries of these States to support the specific action claimed for it by Dr. Mueller. Moreover, the Deoli case, which is the only reliable one reported, would tend to prove that the drug is powerless in man, as it has been demonstrated to be in animals, when a full dose of cobra poison has been injected.

84. This method of treatment will be continued till more definite conclusions can be arrived at.

TABLE 14.—*Influence of Season on Mortality.*

		PERCENTAGE OF TOTAL DEATHS AMONG IN-PATIENTS.			
		Quarters of the year.			
		First.	Second.	Third.	Fourth.
Ajmere Division	1893	25	13	24	38
	1894	24	19	28	29
Agency Hospitals and Salt Dispensaries	1893	61	8	8	23
	1894	45	...	30	25
Native States	1893	23	24	20	33
	1894	26	17	27	30

85. The above table shows the percentage of deaths among in-patients in the four quarters. In the Ajmere Division and in Native States' dispensaries the fourth quarter was the most fatal, as in the previous year, while in the Salt dispensaries the mortality was greatest in the first quarter, as in 1893. The people in the low-lying salt districts seem to suffer more severely from malarial fever of a severe type during the cold months; consequently, the mortality was 45 in January, February, and March, while in the second quarter, when the weather had become hot, it fell to nothing. The nature of the work in these districts is such as to account for some of the excessive sickness in the cold weather. During this season the salt is made, and the coolies employed in its manufacture spend the day in damp pits, and are often wet above the middle while a cold northerly wind blows over the treeless waste and chills them to the bones.

TABLE 15.—*Sex, Age, and Caste.*

STATEMENT IV.

		Percentage of the total treated.				
		Men.	Women.	Children.	Hindus.	Musalmans.
Ajmere Division	1893	53	19	28	66	26
	1894	54	18	28	66	27
Agency Hospitals and Salt Dispensaries	1893	63	16	21	49	33
	1894	63	16	21	50	33
Native States	1893	55	20	25	66	28
	1894	54	20	26	66	28

86. This table shows that men formed considerably over half the daily attendance at all dispensaries and that more children than women sought relief; also that Hindus were much more numerous than Musalmans, as might be expected in a Hindu country.

TOTAL	231	5	171	1	2,077	44	1,932*	29

* Includes 21 operations performed in the Salt Dispensaries and 2 in the Agency Hospitals at Abu and Jeypore.

87. In the Ajmere-Merwara dispensaries 171 major operations were performed during the year, against 231 in 1893. The falling off was principally in the Ajmere dispensary.

Of the total operations performed in this division, 120 were done in the Ajmere city dispensary, with only one fatal case.

88. In Native States' dispensaries there was a falling off in comparison with the major surgery of the previous year; however, minor operations increased very considerably, and the deaths fell from 44 to 29.

89. In these dispensaries 414 lenses were extracted for cataract, and 253 other eye operations were performed; there were 84 amputations, with five deaths, 248 successful operations on joints, 89 lithotomies, with four deaths, 18 successful litholapaxies, and many good plastic operations were performed during the year.

90. Minor operations rose from 43,913 to 46,827 in Native States' dispensaries.

91. The deaths from lithotomy were 4·4 per cent. and nothing in litholapaxy, while in the previous year the lithotomies were 2 per cent. less fatal than the litholapaxies.

92. As in the previous year, Dr. Hendley's surgery in the Mayo Hospital, Jeypore, was far in advance of anything in these States; in this hospital 505

major operations were performed, with only 4 deaths. He performed in this hospital and in his out-dispensaries 281 extractions of the lens for cataract, 97·51 per cent. of which were successful, 47 iridectomies, 18 successful litholapaxies, and 15 amputations, with two deaths.

93. There were 30 operations of lithotomy performed in Jodhpore, with two deaths, 14 successful in Ulwar, 13 in Oodeypore, with one death, and 8 successful in Bikanir. In Kotah and Jhallawar, respectively, 46 and 48 extractions of the lens for cataract were performed, in Oodeypore 18, and in Deoli 8.

94. In the Agency and Salt dispensaries 23 major and 1,189 minor operations were performed—a decrease of 4 in major and an increase of 116 in minor operations.

TABLE 17.—*Surgical operations for Mycetoma.*

NATURE OF OPERATIONS.		Number.
AMPUTATIONS	Forearm	1
	Thigh	1
	Leg	19
	Foot	5
Excision of soft parts		44
	TOTAL	70

95. There were 70 amputations and excisions for Mycetoma, against 98 in the previous year, *viz.*, 29 in Marwar, 24 in Bikanir, 7 in Jeypore, 3 in Ajmere-Merwara, 2 in Jaisalmir, 2 in Ulwar, 1 in Meywar, 1 in Banswara, and 1 in Shahpura.

96. This is a disease of the sandy desert: it attacks the sole of the foot, and is rarely met with much above the ankle. The hand is sometimes affected, and I have seen this more frequently in Bhishtis than in other castes. Both varieties are met with in these States, but the dark is much more common than the pale sort.

TABLE 18.—*Expenditure.*

STATEMENT V.

		1893.	1894.	Percentage on the total cost of 1894.
		₹	₹	₹
AJMERE DIVISION	ON ESTABLISHMENT—

AJMERE DIVISION	Cost per case treated	30	59	
	Cost per diet per diem	16	19	
AGENCY HOSPITALS AND SALT DISPENSARIES.	Cost per case treated	104	105	
	Cost per diet per diem	...	...	
NATIVE STATES	Cost per case treated	52	54	
	Cost per diet per diem	20	18	

97. The above tables show the total expenditure on hospitals and dispensaries, and the invested capital in the Ajmere Division, also the cost of each case treated.

98. In the Ajmere-Merwara dispensaries expenditure rose from R9,433 to R17,294; the principal increase was a sum of R5,080, given towards the building of a new hospital instead of the old Ajmere dispensary which has been condemned on sanitary and other grounds.

99. A sum of R2,500 was invested in Government paper in favour of the Ramsur Branch dispensary, and R1,500 promissory notes which belonged to the Masuda dispensary were sold to assist in the building of the new hospital at Ajmere.

100. The invested capital now stands at R8,500, against R7,500 in the previous report.

101. The subscriptions from Natives in Ajmere city increased considerably during the year, but the contributions from Europeans diminished greatly.

102. The financial condition of the Todgarh dispensary continues to improve, while that of Pisangan and Deolia suffered, as the Raja of the former and the Thakur of the latter place did not pay their annual contributions.

103. The Abu and Abu Road dispensaries, supported partly by Government and partly by private subscriptions, had again a small balance of income over expenditure, and there are still ₹5,000 invested in Government paper in favour of these charitable institutions.

104. In Political Agency and Northern India Salt Revenue dispensaries the expenditure on Europe medicines rose considerably, while there was a marked fall in buildings and repairs. The addition of the Kotra dispensary to this list during the past year accounts for the increased cost of menial servants and for a rise under other headings.

105. In Native States the expenditure on medical institutions rose from ₹2,11,467 to ₹2,41,744; this was mainly due to new hospitals and dispensaries opened during the year, but also, in some measure, to the loss in exchange on the cost of Europe medicines and surgical appliances: the cost of buildings and repairs more than doubled principally on account of new hospitals and dispensaries finished and constructed during the year.

106. The items under the headings compounders, dressers, and menial servants have somewhat increased; this has been caused, in a great measure, by the new dispensaries opened, but, in a few instances, by provision which had to be made for increased attendance at old institutions.

107. In accordance with instructions laid down in Foreign Department letter No. 714-I of the 25th February last, to the Agent to the Governor-General, enquiries have been made from all Medical Officers, with a view to the reduction of expenditure under the above headings; the consensus of opinion is, however, that this would not be possible without detriment to efficiency, so the idea of lessening the staff in dispensaries has been abandoned as impracticable and undesirable for institutions supported by Darbars.

108. Many Hospital Assistants in Rajputana perform the work of District Surgeons; they have medico-legal, sanitary, and other duties which take them away from their dispensaries for considerable periods, and some of their districts are very large. They have to see and prescribe for officials and others at their houses, and often at a distance from their dispensaries; as they are the only practitioners to whom the out-district people have access, it is in the public interest that they should have reasonable time for private practice, and without compounders and dressers to carry on, during their absence, the above duties the dispensaries would be neglected.

109. Besides, the prejudices of the people in Rajputana are such that Brahmin compounders have to be employed, and it would not be possible to get men of good caste to combine compounding with menial services, nor would those sufficiently educated to be trained as compounders carry water for the patients. Further, low caste men who accept service as "puggies" and "chowkidars" could not be employed as bihishtis in the dispensaries of Hindu States, unless it were intended to exclude all but the lowest castes from free medical aid.

110. Many of the Hindus in these States who accept the prescriptions of Muhammadan Hospital Assistants, will only take medicines compounded by Hindus, and any innovation to abolish the Brahmin compounders in our dispensaries would be equally distasteful to the Darbars who pay and the people who seek medical relief; moreover, the economy that could be effected by this step would be small and the detriment to progress in European medicine very material.

111. The reduction in expenditure on establishment from ₹79,991 to ₹71,404 has been effected by the omission of the pay of the Agency Surgeon, Kotah and Jhallawar, as directed in the letter above quoted, paragraph IV.

112. The following sums were expended by various States during the year under report on medical institutions, *viz.*, Jeypore, ₹51,497; Bikanir, ₹45,853; Oodeypore, ₹24,839; Jodhpore, ₹24,734; Ulwar, ₹22,031; Kotah, ₹18,124; Jhallawar, ₹11,994; Bhurtpore, ₹11,052; Tonk, ₹9,916; Sirohi, ₹2,175; Jaisalmir, ₹2,104; Banswara, ₹1,433; Shahpura, ₹1,067; and Pertabgarh, ₹945.

113. The Nathdwara Goshainji Maharaj, the Raja of Khetri, the Rao Rajas of Sikar and Uniara, and the Thakurs of Pokurn and Chomu support their own dispensaries.

114. The Maharao of Bundi, the Rao of Kushalgarh and the Maharawal of Dungarpore now keep up dispensaries at their capitals, from which no returns are received. I inspected these institutions during the cold weather and found them all much behind the dispensaries of other States.

115. The Maharaja of Kishengarh has lately opened his own dispensary at Kishengarh, and the Mission hospital, which has for many years done excellent work there under the superintendence of Dr. Husband, of Ajmere, has been transferred to Sarwar, a large town in the Kishengarh State.

SECTION III.—JAILS.

TABLE 19.—*Cases and Deaths.*

		Number of jails.	Average number of prisoners of all classes.	Cases in hospital.	Average daily sick.	Deaths.	Average duration of cases in days.	Percentage of deaths to cases treated.	DEATH-RATE PER THOUSAND PRISONERS PER ANNUM.				
									TOTAL.	*Quarters of the year.*			
										First.	Second	Third.	Fourth.
Ajmere Division	1893	1	337·10	88	5·20	4	22	4·55	11·87	23·72	...	11·86	11·86
	1894	1	333·10	*98	4·66	6	17	6·12	18·01	12·00	...	12·00	48·00
Native States	1893	14	4,558·67	5,820	151·01	146	9	2·51	32·03	21·92	8·76	35·08	62·28
	1894	17	4,383·42	*5,869	144·03	124	9	2·11	28·29	30·12	17·32	32·84	32·84

* The number of sick remaining on 1st December 1893 has been included.

116. The above table shows that the daily average number of prisoners was less in all jails than in the previous year, *viz.*, 4 less in Ajmere and 175·25 less in the 17 jails of Native States from which returns have been received.

117. The cases treated in hospital rose in the Ajmere jail from 88 to 98, and in the jails of Native States from 5,820 to 5,869; the average daily sick was, however, lower both in Ajmere and in the jails of Native States, *viz.*, 4·66 against 5·20 in the former, and 144·03 against 151·01 in the latter. The deaths were two more in the Ajmere jail than in 1893, *viz.* 6, against 4, but in the jails of Native States they fell from 146 to 124. The death-rate in the Ajmere jail rose from 11·87 in 1893 to 18·01 per mille in the year under report, and fell in the jails of Native States from 32·03 to 28·29. The fourth quarter was the most, and the second the least, fatal of the year.

118. The death-rate varied from nothing in the Jaisalmir, Shahpura, and Pertabgarh jails to 106·35 per mille in Banswara.

TABLE 20.

YEAR.	PRICE OF WHEAT PER RUPEE.		AJMERE DIVISION.		NATIVE STATES.	
	Seers.	Chittacks.	Average number of prisoners.	Death-rate per thousand.	Average number of prisoners.	Death-rate per thousand.
1890 . . .	14	6	383·18	7·83	4,134·15	42·09
1891 . . .	12	8	407·38	27·00	4,480·87	33·70
1892 . . .	12	10	434·55	27·61	4,533·28	41·70
1893 . . .	12	13	337·10	11·87	4,558·67	32·03
1894 . . .	14	1	333·10	18·01	4,383·42	28·29

119. This table shows that the death-rate in the jails of Native States has steadily improved during the last five years, and it is apparent that this regular fall in mortality is due principally to the better management of these jails and not to season influences.

	1894 .	17	...	...	...	50	17	...	...	...	16
Native States	1893 .	10	...	2	...	34	35	...	...	1	18
	1894 .	15	...	...	...	37	33	...	...	...	15

120. The above table shows the percentage of admissions and deaths from different diseases in all the jails of Rajputana.

121. In the Ajmere jail 46 per cent. of the sickness and 17 per cent. of the mortality was due to malarial fevers and spleen diseases, against 20 per cent. and nothing in the previous year. Lung diseases gave rise to 15 against 14 per cent. of the sickness, but the mortality from these causes remained the same as in 1893; and dysentery and diarrhœa to 3 per cent. of the sickness and 17 per cent. of the mortality against 3 and 25 in the previous year.

122. There was no overcrowding in this jail during the year under report, and the health of the prisoners was very good. There were only 6 deaths, *viz.*, 1 from dysentery, 4 from pneumonia, and 1 from diseases of the digestive system.

123. In the jails of Native States malarial fevers and spleen contributed 31 per cent. of the sickness, as in the previous year, and 15 against 10 per cent. of the mortality; dysentery and diarrhœa 16 against 17 per cent. of the sickness and 33 against 35 per cent. of the mortality. Lungs and respiratory diseases gave rise to 13 per cent. of the sickness, as in the previous year, and to 37 against 34 per cent. of the total mortality.

124. There was no cholera in the jails of Rajputana in 1894.

125. *Jodhpore.*—The new Jodhpore jail has been occupied since March last; it is one of the finest jails in Rajputana, it is well situated, and it can accommodate 1,000 prisoners. The hospital and workshops are without the prison wall, and pipe-water is laid on to all the sections of the building. The health of the prisoners has materially improved since their transfer to this jail; the mortality has fallen from 43·35 in 1893 to 30·04 *per mille* in the year under report, and a further improvement in this direction may be anticipated.

126. *Jeypore.*—The mortality in the Jeypore Central Jail has fallen considerably, *viz.*, from 40·30 to 35·77; some of the improvements recommended have already been carried out and others are under consideration. It is hoped the overcrowding will be obviated shortly by the erection of a new dormitory for women. The new District Jail at Jeypore is a model prison, with a much smaller death-rate, *viz.*, 22·70.

127. *Oodeypore.*—The Oodeypore Central Jail is a fairly well arranged prison, and it is in excellent order, but it is always much overcrowded, and the mortality rose from 39·55 to 39·86, which is unsatisfactory; a fall in the high death-rate might have been expected in this orderly prison if the accommodation had been sufficient. A new barrack, a new factory, and better accommodation for female prisoners are under consideration, and it is hoped these improvements will be carried out before the end of the year.

128. *Bikanir.*—The Bikanir jail is in excellent order as hitherto; the rate of mortality has, however, risen considerably owing to 3 deaths in the cold weather from pneumonia, but it has not been excessive in comparison with the death-rate generally, and the health of the prisoners has been otherwise very good throughout the year. The death-rate was only 5·83 *per mille* in 1893, but it rose to 11·68 in 1894.

129. *Ulwar.*—The Ulwar jail is in very good order, though the death-rate rose very slightly, *viz.*, from 9·46 to 10·45. This is one of the best kept and healthiest jails in Rajputana.

130. *Kotah.*—The Kotah jail is in excellent sanitary condition; the mortality has, however, risen very considerably, *viz.*, from 14·71 to 35·72.

131. *Sirohi.*—The Sirohi jail is a new well arranged and well ventilated building; there has, however, been an unsatisfactory rise in the death-rate, *viz.*, from 23·53 in 1893 to 45·75 in the year under report, and this has not been explained satisfactorily.

132. *Tonk.*—The Tonk jail is in good order, the prisoners in it are well looked after, and the improvements recommended have been completed during the year. The death-rate has fallen to 17·90 *per mille* from 21·70 in 1893.

133. *Bhurtpore.*—The drainage of Bhurtpore jail has been improved during the year, the prisoners have been better looked after than hitherto, and the mortality has fallen from 45·69 to 21·73 *per mille.*

134. *Dholepore.*—A new jail is shortly to be built at this capital, and the health of prisoners in the old one has somewhat improved; the death-rate has fallen from 52·60 to 20·20 *per mille.*

135. *Karauli.*—This jail is clean and well looked after, but there is often overcrowding; the mortality has, however, fallen from 52·60 to 18·04 *per mille,* which is satisfactory.

136. *Shahpura.*—The mortality in the Shahpura jail has fallen from 73·76 in 1893 to nothing in the year under report, and arrangements have been made to obviate the overcrowding which has hitherto existed in this jail.

137. *Jhallawar.*—The jail at Jhalrapatan is still in a very unsatisfactory state, it is much overcrowded; scurvy prevails in it, and the death-rate is very excessive, although it has fallen from 83·34 to 57·18 *per mille.*

138. Returns have, for the first time, been received from the jails of Jaisalmir, Pertabgarh, and Banswara. There have been no deaths in Jaisalmir and Pertabgarh, but the mortality in Banswara has reached the unusual figures of 106·35 *per mille*. This jail is badly located inside the city wall; it must always be unhealthy, and, as I have already pointed out, a new jail is the best remedy.

139. No returns have been received from the following States, *viz.*, Bundi, Kishengarh, Dungarpore, and Kushalgarh. I inspected the jails at all these capitals during the cold weather, and pointed out the defects. I also suggested remedies which, I hope, will receive early consideration.

140. It is proposed to build a new jail at Kishengarh immediately, and improvements to the Bundi Jail have already been commenced. The Dungarpore jail calls for the immediate attention of the local authorities, as it is in a most unsatisfactory condition.

141. Although some of the jails in the smaller and more backward States of Rajputana are still very defective from a sanitary point of view, there is every reason to be satisfied with the progress which has been made during the year under report, and many of the prisons in these States are now in excellent condition and some of them models in every way.

15th April .					

INSPECTIONS.

142. The following institutions were inspected during the past season by Surgeon-Lieutenant-Colonel A. Adams, who officiated throughout the year as Residency Surgeon and Chief Medical Officer in Rajputana:—

Hospitals and Dispensaries.—Bandikui Dispensary in Jeypore; Sudder Dispensary and Lady Dufferin Hospital, Ulwar; Residency Hospital, Mayo Hospital, and Lansdowne Hospital, Jeypore; Main Dispensary and Palace Hospital, Bikanir; Western Rajputana States Residency Hospital, Hewson Hospital, First Branch Dispensary and Second Branch Dispensary, Jodhpore; Charitable Dispensary and Mayo College Hospital, Ajmere; Shahpura Dispensary; Haraoti and Tonk Agency Hospital; Charitable Dispensary, Deoli; Bundi Dispensary; Main Dispensary and Victoria Hospital, Kotah; Chaoni Dispensary, Jhalrapatan Dispensary; Sheogunge Dispensary in Sirohi State; Beawar Dispensary; Dholepore Sudder Dispensary; Bari Dispensary; Rajakhera Dispensary; Anah Hospital; City Dispensary and Female Hospital, Bhurtpore; Mahwa and Hindaun Dispensaries in Jeypore; Karauli Dispensary and Karauli Female Hospital; Tonk

Dispensary and Walter Female Hospital, Tonk; Chatsu Dispensary; Kushalgarh Dispensary; Lansdowne Hospital and Walter Female Hospital, Oodeypore; Dungarpore Dispensary; Kherwara Dispensary; Nathdwara Dispensary; Bhilwara Dispensary; Todgarh Dispensary; Sambhar Raj Dispensary; Sambhar Salt Dispensary; Northern India State Revenue Dispensary, Pachbadra; Rajputana Agency Hospital and Abu and Abu Road Dispensaries, as well as all Imperial Service Corps, Local Corps, and Detachment Hospitals.

Jails.—Ulwar, Jeypore, Bikanir, Jodhpore, Ajmere, Shahpura, Bundi, Kotah, Jhalrapatan, Dholepore, Bhurtpore, Karauli, Tonk, Kushalgarh, Oodeypore, and Dungarpore.

FEMALE HOSPITALS AND EDUCATION OF WOMEN.

143. *Ajmere.*—A medically qualified Superintendent, Miss Campbell, has been appointed to the Mission Female Dispensary at Ajmere: Miss Young also continues her useful labours among the people there, and much good work is done by these ladies.

144. *Beawar.*—Mrs. Ashrafi, late of the Karauli Female Dispensary, has been appointed to open the Beawar Female Dispensary which has been long closed for want of a qualified practitioner to carry on the duties.

145. *Ulwar.*—Miss Crawley succeeded Miss Hannan in the superintendency of the Lady Dufferin Hospital, Ulwar. There are two Agra qualified female practitioners at work in this hospital, which is now in a very satisfactory condition. During the year 16 major and 1,037 minor operations were performed.

146. *Oodeypore.*—Mrs. Lonorgan continued to superintend the Walter Female Hospital, Oodeypore, throughout the year under report, and there is a qualified female practitioner working under her. During the year 993 in-door and 13,349 out-door patients were treated in this hospital; 2 major and 512 minor operations were performed.

147. *Tonk.*—Miss. B. B. Bose, M.B., began work at Tonk in April 1894 in the ordinary dispensary in that city, and on the 1st of June she opened the Walter Female Hospital which has been recently built. Miss Bose has already treated 5,709 out-door and 84 in-door patients, and performed 57 major and 528 minor operations. She is already popular in several of the Zenanas, and does a great deal of good work outside the hospital among the purdah ladies. An Agra qualified practitioner, educated at the expense of the Tonk Darbar, has been appointed on a salary of R50 a month to assist Miss Bose.

148. *Kotah.*—Miss Bessie Karim Ullah continues to hold sole charge of the Victoria Hospital for women in Kotah city, and to do good work there as well as in some of the Sardars' Zenanas. In this institution 4,857 out-door and 278 in-door patients were treated, and 30 major and 313 minor operations were performed.

149. It is now proposed to appoint a lady doctor temporarily to the Kotah Palace, and it is hoped that she may become popular in the Zenanas, where female medical practice is of so much more importance than among outside ladies and women who have access to ordinary medical aid.

150. *Jeypore.*—Two female practitioners are employed in the Mayo Hospital, Jeypore, under the Residency Surgeon; they performed their hospital work satisfactorily, and attended many cases in the city besides. The *dhai* class in that hospital continues a success, and many village *dhais* gain considerable knowledge by attending this course, although they are mostly illiterate.

151. *Bhurtpore.*—An Agra qualified female practitioner has opened a female hospital in Bhurtpore city, and she has a fair attendance of out-patients:

there are also a few in-patients, and she is sometimes called into the Zenanas.

152. *Jodhpore.*—A female practitioner was appointed to the Hewson Hospital, Jodhpore, but she has left, and endeavours are now being made to fill her place.

153. *Sirohi.*—Mrs. Ives, a qualified midwife, is still in charge of His Highness the Maharao of Sirohi's family, and she attends an occasional call outside, but she has no hospital to receive patients and little leisure for outside work.

154. One of the female students sent to Agra by the Tonk Darbar qualified last year, and is now employed in the Walter Hospital.

155. Female education is still so backward in these States that it is impossible to obtain a supply of candidates for the scholarships in the Agra Medical School, and these are now all vacant. We shall have to rely on other provinces for a supply of qualified female practitioners, and this will enhance the cost of female dispensaries in these States, as the salaries will have to be larger to attract outsiders than the locally qualified would expect; however, there is no present remedy for this, as everything possible has been done to attract suitable local candidates without effect.

A. ADAMS, M. D., *Surgn.-Lieut.-Col.*,
Offg. Administrative Medical Officer
in Rajputana.

MOUNT ABU;
Dated the 3rd June 1895.

															Add amount of Magistrate's Lock-up				1 076		
															GRAND TOTAL .				17,481		

When prisoners of different classes are confined in the same jail, the expenditure on establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it or contributing to it, and not otherwise.

Hospital charges (column 7) should include rations, and also cost of medicines supplied, both from the bazar and the Medical Store Depôt.

In this series (Financial) annas and pies are only to be shown where there are columns for them.

STATEMENT XIII (FINANCIAL).—*Showing the net cash earnings of Convicts sentenced to labour in the Ajmere Central Jail during the year 1894.*

1	2	3	4	5	6	7	8	9	10	11	12	13	14
Serial No.	NAME OF JAIL.	Average number sentenced to labour.	Average number employed on jail manufactures.	Cash balance on manufacturing account in hand on the 1st January 1894.	Cash drawn on manufacturing account during the year.	Total.	Paid into Treasury on manufacturing account.	Cash balance in hand on manufacturing account on the 31st December 1894.	Total.	Cash earnings (being total of column 10 less total of column 7).	Average earnings per head, calculated on column 3.	Average earnings per head, calculated on column 4.	REMARKS.
				R a.	R a.	R a.	R a.	R a.	R a.	R a.	R a.	R a.	
1	Central Jail, Ajmere .	283·67	156·14	...	5,380 4	5,380 4	7,158 12	...	7,158 12	1,778 8	6 4	11 6	

NOTE.—All proceeds of labour, whether paid for by transfer in accounts from other departments or by cash, are to be included in this statement, but no mere estimate of value of work done by convicts as prison servants or in manufacturing clothing or other articles required for jail purposes is to be included.

STATEMENT XIV (FINANCIAL).—*Showing the net cost of the Prisoners in the Ajmere Central Jail during the year 1894.*

1	2	3	4	5	6	7	8	9

No. CCCXL.

FOREIGN DEPARTMENT SERIAL No. 86.

RAJPUTANA SANITARY, VACCINATION, DISPENSARY, AND JAIL REPORT

FOR

1895.

Published by Authority.

CALCUTTA:
OFFICE OF THE SUPERINTENDENT OF GOVERNMENT PRINTING, INDIA.
1896.

CALCUTTA:
GOVERNMENT OF INDIA CENTRAL PRINTING OFFICE,
8, HASTINGS STREET.

No. 3446-G.—2 of 1896.

FROM

THE AGENT TO THE GOVERNOR-GENERAL, RAJPUTANA,

To

THE SECRETARY TO THE GOVERNMENT OF INDIA,

FOREIGN DEPARTMENT.

Dated Abu, the 21st August 1896.

SIR,

I HAVE the honour to forward copies of the letters cited on the margin from Brigade-Surgeon-Lieutenant-Colonel T. H. Hendley, C.I.E., Administrative Medical Officer in Rajputana, submitting his report for 1895 on Dispensaries, Jails and Sanitation in Rajputana and Ajmere-Merwara, and on Vaccination for the official year 1895-96, together with a note reviewing the report.

Letter No. 1712, dated 15th June 1896.
Letter No. 1756, dated 18th June 1896.

I have the honour to be,

Sir,

Your most obedient servant,

R. J. CROSTHWAITE,

Agent to the Governor-General.

No. 1712, dated the 15th June 1896.

From—The Administrative Medical Officer, Rajputana,

To—The First Assistant to the Agent to the Governor-General, Rajputana.

I have the honour to forward the Annual Report on Sanitation, Dispensaries and Jails in Rajputana for the year 1895, and on Vaccination for the official year 1895-96.

2. The statements named in the margin are appended.

Mortuary Statements I to X.
Vaccination Statements I to V.
Comparative Statement of Small-pox and Vaccination.
Dispensary Statements I, II, III, IIIA.
Supplement to IIIA, IV, V, Parts I and II.
Jail Statements III, X, XIII, XIV and XV.

A new table No. XI has been added to show the total amount of medical aid that has been given from all sources to the sick poor in Rajputana.

3. I have drawn special attention, as my predecessors have done, to the great want of additional clerical assistance in my office, which has always led to delay in submission of reports. With a temporary increase of establishment, which was sanctioned in your letter No. 1894-G., dated 9th May 1896, and by borrowing the services of another clerk, I have been able to dispense to a very large extent with the assistance of Reserve Hospital Assistants. I trust, however, that the changes which I have proposed will be approved, and that in future years I shall be able to do without additional aid of any kind.

I beg to recommend to the favourable notice of the Agent to the Governor-General the following officers who have distinguished themselves by good surgical work :—

Surgeon-Major J. Crofts,
„ P. D. Pank,
„ W. H. Neilson,
Surgeon-Captain H. R. Woolbert, and
Assistant-Surgeon Rash Behari Maitra.

No. 1756, dated the 18th June 1896.

From—The Administrative Medical Officer, Rajputana,

To—The First Assistant to the Agent to the Governor-General, Rajputana.

With reference to my letter No. 1724, dated the 15th instant, I have the honour to forward herewith a cholera map and Table XI of the Report for 1895.

Note on the Annual Report on the Sanitation, Dispensaries and Jails of Rajputana for the year 1895 and on the Vaccination for the official year 1895-96.

Rainfall.

The rainfall in Ajmere, though above the average of the previous six years, was less than in 1894. In Merwara it was 5·21 inches below the average of the six preceding years, and 8·42 inches less than in 1894. In Native States it was considerably below the average. In the south and east of Rajputana there were no cold weather rains and the crops were consequently inferior; but although the prices of grain rose in consequence, no serious scarcity was felt in the States concerned. In the Western States the rainfall was very scanty, and the tanks in the districts were mostly low or dry. Cattle from Jaisalmir were driven into Sind or towards Malwa in search of pasture and water.

Vital Statistics.

The registration of vital statistics in the district of Ajmere-Merwara shows progress on the whole. The birth-rate in the Ajmere Division rose from 32·23 to 35·29 *per mille*, while the death-rate fell from 31·02 to 26·95. The highest mortality was again amongst children under five years of age. Fevers were less fatal than in the previous year, but there was an increase in the number of deaths from cholera and small-pox.

The number of States which furnish statistics in some form or other remains the same as last year, and the information furnished is said to be only approximate even in the case of the cities, while in the districts it is very

defective. In reviewing the report for 1894 the Government of India remarked that the vital statistics of Native States could be much improved were Assistant Surgeons or Hospital Assistants appointed to the inspecting staff. This suggestion has been acted on in Jeypore, where a young Assistant Surgeon was placed in charge of the Department.

Cholera.

There were 448 cases of cholera, with 289 deaths, in Ajmere-Merwara, while in Native States there were 1,906 cases, with 1,049 deaths. The Eastern States of Rajputana were entirely free from the disease. A cholera map for Rajputana is attached showing the intensity with which the disease prevailed in the various localities.

Sanitation.

The sanitary and conservancy arrangements of Ajmere have worked satisfactorily. The water from the Foy Sagar is freely used for drinking purposes, while that of the Ana Sagar supplies other needs. The conservancy arrangements in Beawar are said to be unsatisfactory. The Municipal Committee are, however, considering what improvements can be made. The rules regarding village sanitation will shortly be introduced. At Abu arrangements are being made for bringing in a supply of pure water from a distance, water often having been deficient in the hot season. In Jeypore, Jodhpore, Bikanir, Odeypore, Kotah, Karauli and Ulwar, a steady progress in matters of sanitation is reported. In Bhurtpore a Sanitary Board was started in August 1895, and is said to have effected great improvements, village sanitation is still confined to Ulwar and Jeypore, while in Jodhpore the vaccinators have been taught the elements of sanitation, in order that they may advise the villagers.

Vaccination.

In the Ajmere Division the number of primary vaccinations rose from 13,337 to 15,583, of which 96·24 were successful. The average number of operations of each vaccinator rose from 1,113 to 1,331, while the cost of each successful operation fell from 23 to 17 pies, and the total expenditure from R1,610 to R1,397. Vaccination in the city and suburbs of Ajmere is now compulsory, owing to the extension of the Vaccination Act to the Ajmere Municipality. In Native States, too, there was a rise in the number of primary vaccinations from 262,100 to 299,099, and in the percentage of successes from 98·48 to 98·50. The cost of each successful case fell from 19 to 18 pies. In Marwar there was an increase from 75,753 to 87,619 vaccinations, with a percentage of success of primary vaccinations of 99·52. Other States which showed an increase were Jeypore, Ulwar, Meywar, Kotah, Jhallawar and Bhurtpore. The total expenditure under this head rose from R25,632 in the preceding year to R27,459.

Dispensaries.

The number of medical institutions in the province rose from 144 to 148 when compared with the previous year. A dispensary was opened at Kishengurh and was placed under the supervision of the Residency Surgeon, Jeypore, and the dispensaries at Bundi, Dungarpore and Kushalgurh were also placed under the supervision of the Administrative Medical Officer. The two female dispensaries at Kerowlee and Beawar were re-opened during the year, while the Ajmere Police Hospital and the temporary railway dispensary at Maoli in Meywar were closed, the former owing to it being decided to treat the patients in the new General Hospital which was formally opened by Colonel Trevor, Agent to the Governor General, on March 4th. Several of the old dispensary buildings in the various States were replaced by new ones, and the Chiefs of Rajputana are said to be fully alive to the value of medical aid for their subjects.

The sale of quinine through postal agency was continued throughout the year, but was not very successful. It has, however, been recommended that the system be allowed to continue for a further period, as it will take time for people to understand its advantages.

The number of in-door patients treated at the Ajmere-Merwara dispensaries rose from 811 to 831, while the out-door cases fell from 54,981 to 54,401. In the agency and salt dispensaries the attendance of out-door patients rose from 19,574 to 25,301, and the in-door cases fell from 670 to 607. The hospitals and dispensaries of Native States return 14,012 in-door and 889,075 out-door patients as treated during the year against 13,156 and 836,630 respectively in 1894.

As in previous years malarial fevers and spleen diseases accounted for the greater number of admissions in all the dispensaries, although the percentage of admissions was lower than in the previous year. Mortality from diseases of the lung and respiratory organs in Ajmere-Merwara fell from 36 to 29 *per cent.* of total cases treated in-doors, and remained the same, *viz.*, 23 *per cent.*, in Native States. In the Agency and Salt Dispensaries the deaths rose from 45 to 46 *per cent.* under this head. Lung diseases, therefore, accounted for the greater number of deaths in all the dispensaries, but in Native States' dispensaries diarrhœa and dysentery proved as fatal.

There were 835 cases of leprosy treated during the year against 789 in 1894. No fresh light was thrown during the year on the treatment of snake-bite by the hypodermic injection of strychnia, as the opportunities for using the remedy were rare.

Major operations in Ajmere-Merwara rose from 171 to 272, and in Native States from 1,932 to 2,583, including 10 performed in the Salt and Agency hospitals. The deaths in Native States decreased from 29 to 26.

Expenditure.

The expenditure on the upkeep of the dispensaries in Ajmere-Merwara decreased from ₹17,294 to ₹12,267, but increased in the Native States from ₹2,41,744 to ₹2,72,908, and in the Agency and Salt Dispensaries from ₹11,074 to ₹12,094. The increase in both the latter cases is due to extra expenditure on buildings and the salaries of medical officers.

Jails.

The daily average number of prisoners in the Ajmere Jail decreased from 333 to 330, and the number of admissions to hospital rose from 98 to 285 and the daily average sick from 4·66 to 15·49.

The death-rate also rose from 18 01 to 45·35 per thousand. The mortality in the jail was unusual and is attributed to the epidemic of malarial fever which broke out in January and continued till May 1895. With regard to the question of quarantine, it is not intended to place every prisoner on admission in quarantine, but only such as come from a village or area where sickness of a contagious or infectious character exists. Nineteen Native State jails furnished returns against seventeen in the previous year. The daily average number of prisoners in these jails rose from 4,383 to 4,556, while the total number of admissions to hospital fell from 5,869 to 3,542, and the daily average sick from 144·03 to 126·12. The number of deaths, however, increased from 124 to 128, though the death-rate fell from 28·29 to 28·09 *per mille*. The rate of mortality fell in all the jails of Native States except in those of Jodhpur, Sirohi, Shahpura and Pertabgurh, and ranged from 80·14 *per mille* in the last named jail to 7·16 in Ulwar, while there were no deaths at Jaisalmir, Karauli and Kishengarh. The overcrowding noticed last year in the Oodeypore Jail has not, it is to be regretted, been remedied. The scheme for the construction of new wards is still under discussion. The condition of the Karauli and Jhallawar Jails has,

it is satisfactory to note, improved, but the Banswara Jail still continues to be unhealthy. There was apparently no overcrowding in the other jails.

Female hospitals and medical education of women.

The Mission Female Dispensary at Ajmere continued under the charge of Miss Campbell, while Miss Young also did useful work among the women of Ajmere.

The Beawar Dispensary for females was re-opened under the charge of Bibi Ashrafi, whose appointment was mentioned in last year's report. At Ulwar Miss Dissent, M.D., succeeded Miss Crawley on the 1st of May 1895. The hospital building at Ulwar is being greatly improved. The Walter Female Hospital at Oodeypur, owing to the death of Mrs. Lonorgan, was in charge of a female hospital assistant from the 7th May to the 22nd of August, when Miss Perry took over charge, while Miss Bose remained throughout the year in charge of the Walter Hospital at Tonk. The second female pupil sent by the Tonk Darbar to Agra failed to qualify as a hospital assistant, but returned as a compounder. Miss Bessie Karimullah continued in charge of the Victoria Hospital at Kotah. There was no change in the arrangements at Jeypore and Bhurtpore, while the Jodhpore Darbar propose opening a female hospital at the capital as a memorial to His Highness the late Maharaja. The Bikanir Darbar has sanctioned the employment of a female hospital assistant for the Palace, and the Karauli Dispensary, which was opened for a short time, has been closed for the want of a qualified hospital assistant. Efforts are being made to procure one.

Three female hospital assistants are required in Rajputana, and, owing to the difficulty in finding suitable persons, efforts are being made to obtain pupils from other provinces for whose education the Darbars will pay.

Inspection.

The appointment of Residency Surgeon and Chief Medical Officer in Rajputana was abolished, with effect from the 29th of March 1895, on which date Brigade-Surgeon-Lieutenant-Colonel T. H. Hendley, C.I.E., was appointed Administrative Medical Officer in addition to his own duties as Residency Surgeon, Jeypore. He, however, immediately proceeded on privilege leave, and Surgeon-Lieutenant-Colonel Adams officiated as Administrative Medical Officer until the 25th of June, when he was relieved by Dr. Hendley, who held the office till the close of the year. During the year he inspected all the jails and important medical institutions at the head-quarters of the several Residencies and Political Agencies in the province.

A medico-topographical history of Jeypore by Brigade-Surgeon-Lieutenant-Colonel T. H. Hendley was published during the year, and similar histories are in course of preparation by the medical officers in the other Rajputana States. When complete, these histories will form a medical gazetteer of the province.

ABU;
The 21st August 1896.

R. J. CROSTHWAITE,
Agent to the Governor-General, Rajputana.

REPORT

ON

THE ADMINISTRATION OF RAJPUTANA

(SANITARY, VACCINATION, DISPENSARY, AND JAIL)

FOR

1895.

SECTION I.—SANITATION AND VACCINATION.

METEOROLOGY AND ITS RELATION TO FOOD SUPPLY.

TABLE 1.—*Rainfall of Ajmere and Beawar.*

YEAR.	Place.	INCHES.			
		January to May.	June to September.	October to December.	TOTAL.
1895	Ajmere	1·21	23·21	0·01	24·43
Average of six previous years	Ajmere	2·10	18·25	1·20	21·55
1895	Beawar	1·31	13·84	0·11	15·26
Average of six previous years	Beawar	1·42	17·93	1·12	20·47

The rainfall at Ajmere, though 2·56 inches less than in 1894, was 2·88 inches above the average for the preceding six years. In Beawar it was 5·21 inches below the average for the above period, and 8·44 inches less than in 1894.

2. The Foy Sagar, which is the principal source of the Ajmere water-supply, contained water in March up to about 7 feet below the weir level, sufficient, it was estimated, for the wants of the town until the next rainy season.

3. In Native States the rainfall has been considerably below the average. In the Ulwar State the fall varied from 9·06 inches in the Tijara Tehsil to 24·71 inches at Thana Ghazi. At Ulwar itself it was 17·25 or less than half the normal amount. At Jeypore the average fall for the State was 19·72, the fall at the capital being 23·55 or 2·65 below the average. As at Ulwar there was a bad distribution of the rainfall, both as regards time and quantity, in all districts, hence sowing after sowing of the crops failed. In the south of Rajputana there were no cold weather rains which caused damage to the crops (in Kotah, Jhallawar, and Meywar), but it is stated that, although prices of grain have risen in consequence, no apprehension of serious scarcity is felt in those States. This is true also as regards Eastern Rajputana, but animals are expected to suffer greatly from want of grass.

In the Western States the rainfall was very scanty. In Jaisalmir the tanks are empty and there were hardly any rain crops. The animals are being driven into Sind or towards Malwa in search of pasture and water. The rainfall at Jodhpore was 12·48 inches as compared with 17 inches in the previous year. In Pali, a little to the east, 7·73 inches were registered, against 23 46

in 1894, and in Sirohi 13·9 inches against an average of 25 inches. The tanks in those districts are therefore mostly low or empty.

TABLE 2.

YEAR.	Rainfall in inches.		AVERAGE PRICE OF BARLEY AT AJMERE AND BEAWAR PER RUPEE.				Death-rate per thousand of population.	
			Ajmere.		Beawar.			
	Ajmere.	Beawar.	Seers.	Chks.	Seers.	Chks.	Ajmere.	Beawar.
1891 . . .	8·23	9·55	16	5	12	0	22·05	13·81
1892 . . .	20·87	30·51	17	5	11	14	42·88	33·49
1893 . . .	32·83	27·50	21	15	15	2	22·78	25·13
1894 . . .	26·99	23·70	27	3	16	0	28·59	39·59
1895 . . .	24·43	15·26	21	9	14	6	25·81	30·94

4. It will be seen from the above table that the price of food stuffs was high in Ajmere-Merwara.

VITAL STATISTICS.

TABLE 3.—*Birth-rate of Population of the Ajmere Division.*

STATEMENT I.

YEAR.	POPULATION.			BIRTHS REGISTERED.			BIRTHS TO 1,000 LIVING.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
1893 .	288,325	254,033	542,358	6,915	5,635	12,550	12·75	10·39	23·14
1894 . .	288,325	254,033	542,358	9,393	8,086	17,479	17·32	14·91	32·23
1895 . .	288,325	254,033	542,358	10,254	8,884	19,138	18·91	16·38	35·29

5. In 1893 the birth-rate ranged in Ajmere between 17 and 52, in 1894 between 19 and 74, and in 1895 between 22 and 46 (except in Goerlla district where it was 88), while in Merwara the ranges were in 1893—16 and 31, in 1894—30 and 54, and in 1895—33 and 45. The percentage of male to female births ranged in Ajmere in 1893 from 92 to 144, in 1894 from 92 to 139, in 1895 from 95 to 166 (or 95 to 136 without Pisangan), and for Merwara in 1893 from 105 to 155, in 1894 from 95 to 118, in 1895 from 103 to 122. On the whole registration of births seems to have improved, but the attention of the medical officer will be directed to the discrepancies which still exist in the return.

TABLE 4.—*Death-rate of Population of Ajmere-Merwara.*

STATEMENTS II to X.

YEAR.	DEATH-RATE PER THOUSAND OF POPULATION PER ANNUM.													PERCENTAGE AMONG TOTAL DEATHS.									
		SEX.		SEASONS.				CAUSES.						AGE.									
				Quarters of the year.																			
	Total.	Male.	Female.	First.	Second.	Third.	Fourth.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	Under 1 year.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 30.	30 and under 40.	40 and under 50.	50 and under 60.	60 and upwards.
1893 .	23·30	23·39	23·20	21·96	12·44	36·32	26·32	·01	·14	18·37	1·40	·61	2·79	20	15	5	3	4	9	10	11	12	11
1894 .	31·02	31·44	30·55	44·96	27·76	24·56	26·80	...	·80	25·54	·93	·57	3·16	25	18	5	2	3	8	9	10	11	9
1895 .	26·95	27·25	26·59	28·00	27·92	22·44	29·44	·53	1·39	20·77	·95	·76	2·55	29	15	4	3	4	9	8	9	10	9

6. In this division the total number of deaths in 1895 was 14,614 against 16,825 in 1894, a decrease of 2,211. The highest mortality was recorded in the fourth quarter and the lowest in the third, while in 1894 the first quarter was most fatal and the third again the least. Fevers were less fatal than in the previous year, as was the case also in Native States, this being due in all probability to the scanty rainfall.

7. Forty-four per cent. of the deaths were in children under 5 years of age, or 225 male and 191 female infants under one year per thousand of population. These figures are probably fairly accurate. In the Medico-Topographical Report of Jeypore, in which the mortality returns of Ajmere for an eleven year period (1882 to 1892) were used, the following notes occur (page 76) :—

"The Ajmere mortality table shows a great waste of infantile life, *viz.*, 44·18 per cent. on the average.

As regards the seasons of the year the fourth quarter is the most unhealthy in both Jeypore and Ajmere, and the first is the most healthy."

The figures for 1895 confirm the above observations.

8. The deaths exceeded the births in only 3 out of 23 circles, whereas in 1894 the excess was shown in 10 circles. These figures point to better registration. The districts of Pisangan and Goella, previously referred to, require careful attention in this respect; some excess in Masuda is accounted for by a serious outbreak of cholera. On the whole, however, the registration of vital statistics in the district shows progress.

TABLE 5.—*Deaths according to Diseases in the Ajmere Division.*

STATEMENT VI.

YEAR.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	TOTAL.
1893 . . .	3	75	9,961	754	330	1,514	12,637
1894 . . .	...	437	13,855	506	310	1,717	16,825
1895 . . .	289	754	11,263	512	413	1,383	14,614

9. There was a great diminution in the number of deaths from fevers, but an increase from cholera and small-pox. In 1894 there was no cholera.

TABLE 6.—*Quarterly deaths from Cholera and Small-pox in the Ajmere Division.*

STATEMENTS VII and VIII.

	QUARTERS OF THE YEAR.				TOTAL.
	First.	Second.	Third.	Fourth.	
Small-pox	85	308	75	286	754
Cholera	...	246	6	37	289

10. Cholera broke out on 10th May 1895 and lasted until 29th July, but a milder epidemic occurred in November. There was a considerable amount of small-pox in the second quarter of the year.

NOTE.—The information required for this table cannot be obtained in full from Jaisalmir. The total, therefore, of column 14 does not agree with the totals of the seven preceding columns.

11. The information given in Table VII may be looked upon as being only approximately correct even in the case of the cities; in the districts it is very defective. Some of the returns are supposed to include the rural as well as urban populations, but the larger States hardly make the attempt to give the former, and until a special department is created for the purpose, it is perhaps the wisest course to follow.

12. The Government of India in its review of the Report of 1894 considers "that improvement could be made in the Vital Statistics which are received from Native States if Assistant Surgeons or Hospital Assistants were appointed, as opportunities offer, to the inspecting staff. By this means the States also would acquire an agency capable of extending vaccination, of aiding on occasions of epidemic disease, and of employment generally as district sanitary officers."

13. In paragraph 21 of last year's report it was intimated that such a department was about to be formed at Jeypore. The scheme has been in operation since January 23rd, 1895, on which day a junior Sanitary Inspector was appointed. On May 20th a young Assistant Surgeon was put in charge of the Department under the Superintendent of Dispensaries and was sent to Agra to undergo a course of practical bacteriology in the laboratory of Professor Hankin. These officials inspect village sanitation during the cold weather and also report on vaccination and thus serve to check the work of the Native Superintendent of Vaccination and his assistant. It is proposed after a time to unite the two departments and to bring the control of Vital Statistics also under it.

14. Two thousand three hundred and fifty-four cases of cholera were reported during the year in Rajputana; of these 1,338 were fatal.

The disease appeared on the 6th May at Shahpura, on the 8th at Bhilwara, in Meywar, on the 10th in Ajmere, on the 15th in Marwar, and on the 19th at Dungarpur. The outbreak ceased in Shahpura, Meywar and Kishengarh before the end of the month, and in Marwar on the 6th July, and in Ajmere on the 29th idem. The disease occurred in Sirohi between June 9th and September 1st, and in Dungarpur and the hilly tracts of Meywar between May 19th and August 12th, and in the adjacent district of Pertabgarh between June 10th and August 30th. There were further outbreaks at Ajmere from the 3rd to the 30th November, in Marwar from the 5th to 30th November, and in Bikanir from the 18th November to the 12th December.

15. In Ajmere-Merwara there had been practically no cholera in 1894. In 1895 the first person attacked in the city of Ajmere was a Brahmin who had been to a fair at Pushkar. There were 15 cases with 11 deaths, and almost all the persons who suffered had been to the same fair; 12 fatal cases occurred at that place itself. In the whole district there were 359 cases, of which 249 were fatal, and in Merwara there were 4 cases with 3 deaths. No less than 238 of the cases, with 164 deaths, occurred in the Masuda villages where sanitation was very defective and well water was used for drinking. The disease was said to have been imported from Shahpura, in which place 79 cases, with 22 deaths, occurred between the 6th and 26th of May. A Police Inspector was the first person who was attacked and died; there was no history of importation. This was the case also at Bhinai, where 50 cases occurred, of which 34 were fatal. Af Nasirabad 26 cases (15 fatal) were reported. The disease is said to have been imported from Kekri, in Ajmere. On the whole 13 out of 23 circles of registration were affected.

16. The Meywar cases were reported from Bhilwara, but in the opinion of the Residency Surgeon (in which the Administrative Medical Officer concurs) these were really not cases of cholera at all.

17. In Ajmere in November there was a small outbreak which originated in pilgrims returning from the great annual fair at the Pushkar lake. There were in the whole district 85 cases with 37 deaths.

18. Outbreaks of cholera, although every sanitary precaution is taken, constantly occur after the great November fair at Pushkar. Fortunately in most instances the epidemics do not last long as the season is favourable to their cessation.

19. As regards the Native States, 407 cases, with 273 deaths, were recorded in Marwar. There were sporadic cases at Sambhar and Nawa in May and again in July, but these may not have been correctly returned, as the Hospital Assistants at Sambhar did not hear of them. In Pokurn, which lies 80 miles north-west of Jodhpore, there were 182 deaths out of 302 persons attacked. The disease is said to have been introduced by camelmen, who came, *viâ* Jodhpore, from Berar, but the town of Pokurn and the neighbouring villages are in a very insanitary condition and have a very inferior water-supply.

20. There were 60 cases with 17 deaths in the Sirohi State in villages near Mount Abu. Pilgrims from the Bombay Presidency are supposed to have introduced the disease probably by rail, and most of the cases occurred near the Abu Road Station. A special Hospital Assistant was sent by the Administrative Medical Officer to assist the local Hospital Assistant under whose orders also, in the absence of the Residency Surgeon, Western Rajputana States, on leave, the wells were disinfected with permanganate of potassium. In November an outbreak, which occurred at Jodhpore, Nawa, Didwana, and Nagore, in nearly all cases, was confined to pilgrims from Pushkar.

21. Twenty-nine cases were returned from Kishengarh in May, but the dispensary in that city did not then furnish returns to this office; hence it is impossible to give a history of the outbreak. As there is now a Hospital Assistant in charge of the institution, who is directly subordinate to the Residency Surgeon at Jeypore, the above difficulty will not recur.

22. No less than 1,030 cases, with 498 deaths, were returned from Dungarpur, and 269 cases, with 198 deaths, from Pertabgarh; but as regards these epidemics neither the Residency Surgeon in Meywar nor the Medical and Political Officers at Kherwara are able to give any reliable information. The want of direct medical supervision of the important districts in the hilly tracts which were msot affected is under discussion at present and will, it is hoped, be remedied. The disease is stated to have spread from the adjacent Bombay districts and to have been intensified by want of a proper water-supply.

23. A small outbreak in the village of Jasrasar, 46 miles south-east of Bikanir City, which occurred in November, began in the persons of two women who had returned from Pushkar.

24. The Eastern States of Rajputana were entirely free from cholera in 1895.

25. Summarizing the evidence, it appears that there were *two* outbreaks which are clearly traceable to Pushkar, and a *third* which began in Guzerat and entered Rajputana *by road* to Dungarpur and Pertabgarh, and *by rail* to Abu Road. These facts point to the possibility of prevention.

26. A cholera map is attached to this report, and to increase its usefulness the position of all the dispensary towns has been shown upon it.

SANITATION.

27.—*Ajmere Division*—

Ajmere	Population	41,416	Suburbs	. 27,427
	Birth-rate	39·72	„	. 33·00
	Death-rate	37·62	„	. 22·60

Mortality of children under one year of age per 1,000 living . . 417·39

28. The water from the Foy Sagar is freely used for drinking purposes, while the Ana Sagar lake supplies the gardens and dhobies' ghats. The Superintending Engineer in the autumn of the year observed that the water of the Foy Sagar contained a very large amount of organic impurity and recommended that careful analyses should be made at frequent intervals and filter beds provided. The subject has been carefully investigated by the Civil Surgeon who suggests—

(1) that all villages within the area be removed entirely;
(2) that all cultivation within the area be stopped;
(3) that if cultivation be permitted to continue, it should be without manuring the ground at all. At present the land is manured.
(4) that fodder grass grown within the area be cut and removed and not grazed.

29. When the Administrative Medical Officer inspected the Foy Sagar, he found that crops, which he suspected to have been manured, were growing within a few feet of the water. This surmise proved to be correct. He therefore concurs with the above recommendations, especially as regards the ground adjacent to the reservoir. More villages might be removed by degrees when funds are available, and unless the above measures prove sufficient filter beds must be provided.

30. The conservancy arrangements have worked satisfactorily. The trenching ground is well looked after. Improved carts for the removal of foul water have been provided. A road which has been opened out to the new General Hospital has led to improvement in the sanitation of that part of the city. The Birat system of private sweepers is not a good one, and sewage drains are defective. The means of removal of filth are as yet insufficient.

31. *Beawar*—

Population	20,978
Birth-rate	40·47
Death-rate	36·56

The conservancy system is reported to be unsatisfactory. The private latrines are rarely inspected in consequence of which they are often left uncleansed for days, and the public urinaries are not much used as their mode of construction is unsatisfactory. The sum spent on drainage was very small. The public latrines and main thoroughfares are kept fairly clean. There is a Municipal Committee. The subject of removal of the night-soil from private latrines is under consideration, the present system being defective. Many old cess-pools have been closed. Well water is used for drinking purposes.

No further progress seems to have been made as regards village sanitation.

32. *Mount Abu*—The sanitary arrangements of the station are carefully supervised by the Magistrate, who is advised, when necessary, by the Civil Surgeon. Arrangements are being made for bringing in a supply of pure water from a distance, and it is hoped that the periodical difficulties which have arisen from the want of water in dry seasons will not again occur.

33. The small town of Karari, in the Sirohi State, at which the Abu Road station of the Railway is situated, is in an insanitary condition, but special efforts are being made for its improvement.

NATIVE STATES.

34. *Jeypore*—

Population (intramural)	132,421
Birth-rate	37·41
Death-rate	39·52

The death-rate, it is believed, is fairly accurate, and the birth-rate is improving. The Sanitary Department, to which reference was made last year, has been established as indicated already in paragraph 13 of this report. The Assistant Surgeon, who is the first Inspector, visited and reported on 25 towns, and the second Inspector reported on 203 villages. A special form has been filled up in each case showing defects and advice given, as well as information regarding wells, tanks, population, cattle and other details which will form a good basis for future action. As soon as the season for inspection is finished, the Sanitary Committee, which is composed of two members of the State Council, the Superintending Engineer and the Medical Officer, will be in a position to consider what general measures can be adopted.

In the hot season the first Inspector will be principally engaged in bacteriological work, all the materials for a good laboratory having been received from Europe. Much has been done to improve the sanitary condition of the city, but the Committee are aware that they have still a very great task before them.

The water-supply is sufficient and good, though unfiltered. It is pumped up from a reservior formed from a river which feeds it. It is hoped that filters will be provided, and that the water pipes will be extended to parts of the city which are as yet unreached. Hospital Assistants and Vaccinators have been provided for many years past with sanitary primers which they are instructed to explain to the people.

35. *Jodhpore*—

Population	61,849
Birth-rate	15·52
Death-rate	21·92

It is obvious that the birth and death-rates of Jodhpore are not accurate.

The Durbar continued its grant of ₹1,500 per mensem for sanitary purposes. The money was expended by the Municipal Committee on public latrines, public baths, protection of the water-supply and cleansing the streets. The steam tramway for removal of sweepings, etc., which was talked of last year, has not been constructed, and the cleansing is very imperfectly done by bullocks. The latrines were in good order at the annual inspection; 1,494 seats are provided. The completion of the scheme for a new water-supply tank mentioned last year is still under consideration; there is, however, sufficient water at present for the wants of the city. Vaccinators have been taught the elements of sanitation in order that they may advise the villagers.

36. *Jaisalmir*—

Population	10,509
Birth-rate	36·54
Death-rate	33·59

The registration is particularly well done in this small and remote capital. Sanitation, however, is in a very elementary condition.

37. *Bikanir*—

	Intramural.	Suburb.
Population	39,282	16,958
Birth-rate	39·17	29·54
Death-rate	28·46	11·09

The difference between the rates of births and deaths within and without the walls shows how much more easy it is to obtain accuracy within a walled city than in unwalled places. In the former case, as regards the death-rate, the bodies are counted as they leave the gates; hence none escape. In the

rains and for a short time afterwards tank water is used. At all other seasons drinking water is paid for and is obtained from wells, which average 300 feet in depth. The source is pure and never fails. The city is stated to be one of the cleanest in Rajputana, all filth and refuse being regularly removed to fixed points and, when dry enough, burned there. The work is supervised by a Sanitary Officer, two Inspectors, and 26 chaprassies and duffadars. There are 243 sweepers with 66 buffaloes. Very little urine is removed. This is the case with most towns in Rajputana, and most of the native officials, and not a few Europeans, seem to think the fluid excreta of men and animals are harmless if they pass into the soil, and that it is useless to attempt to remove them. A large number of latrines (Crawley's pattern) was erected in the year. The natural drainage is good.

38. *Bhurtpore*—

Population	68,033
Birth-rate	32·31
Death-rate	28·65

A Sanitary Board was started in August last, which is stated to have already effected great improvements. Roads have been made, pavements repaired (the principal streets are all paved with red sandstone), cess-pools have been constructed, and hollows, in which stagnant water accumulated, have been filled up. A drainage scheme is still under consideration.

The water supply which is from wells is very indifferent. Offensive trades are carried on in the town, and the drainage is bad. Excreta and rubbish are burned in the brick kilns and are supposed to improve the quality of the bricks Village sanitation is hardly attempted, and the towns are very dirty.

39. *Ulwar*—

	City.	State.
Population	52,398	715,388
Birth-rate	21·57	19·48
Death-rate	28·76	11·21

The Ulwar Durbar is supposed to take special interest in the collection of vital statistics, but it is clear from the above figures that no success has at yet been attained.

The sanitation of the city is attended to by a Committee with the medical officer as Chairman. The city is fairly clean. Refuse and filth are buried outside the town, and there are newly constructed latrines, and will be shortly urinals, in suitable positions. The streets are paved, and the drains are flushed twice a day.

There are Sanitary Committees in the towns, and the Agency Surgeon, who, since August last, has been Sanitary Officer, has done everything in his power to improve district sanitation.

40. *Dholpore*—

Population	9,739
Birth-rate	39·22
Death-rate	33·78

The sanitation is supervised in the old-fashioned way by the Kotwal who has no special establishment. Offensive trades are carried on in town limits. There are no animals for taking away excreta, and only 16 sweepers. The Diwan of Dholpore states that the necessity of making public latrines has not yet been felt. The water supply is from wells.

41. *Karauli*—

Population	23,124
Birth-rate	46·96
Death-rate	23·31
Mortality of children under one year per 1,000 births	126·50

The vital statistics are capable of improvement, but the Municipal Committee is doing its utmost to ensure correctness. The town is paved with red stone, and all the houses are constructed of the same material and are of course very hot in the summer. The drainage is natural and excellent. Drinking water is obtained from wells outside the town. The wells within the walls are not sweet. Unsanitary trades are carried on within the walls. The town is a clean one, but urinals are required, and some of the house drains are defective. The sweepings and excreta are buried in convenient places outside, and after three or four months the resulting manure is sold to the cultivators. The conservancy arrangements on the whole are perhaps more satisfactory than those of any other town in Rajputana. Latrines have been made for the women, but not for the men who resort to the ravines round the city.

42. *Tonk*—

Population	46,069
Birth-rate	15·46
Death-rate	16·26

The statistics are defective. The Municipal Committee looks after the conservancy which is attended to more in the new town than in the old. Foul water from the houses is sprinkled over the streets as is the practice in most of the cities in the province. Night-soil is mixed with ashes and dry earth and conveyed on the backs of animals to the fields, where it is used as manure. This is another universal custom in Rajputana. Unsanitary trades are carried on in the outskirts of the town. Water is obtained from tanks and wells and is rather brackish. Rich men drink the waters of the Banas river which flows at a distance of several miles from Tonk. The average depth of the water in the wells is from 45 to 75 feet.

43. *Bundi*—

Population	22,544
Birth-rate	11·93
Death-rate	19·11

In all points this town is very backward. The situation is, however, very favourable to good drainage.

44. *Kotah*—

Population	38,624
Birth-rate	35·39
Death-rate	43·52

The statistics are not reliable. With regard to the excessive death-rate, it should, however, be observed that the population was 1,646 less in 1891 than in 1881.

The city is well supplied with latrines and urinals, and the excreta are carted away and buried.

The water supply is obtained from tanks, wells and the River Chambal. The latter source is most reliable.

The drainage is into the Chambal. The house drains are far from clean.

Village sanitation is reported to be particularly bad in many cases.

45. *Jhallawar*—

	New City or Chaoni.	Old City or Jhalrapatan.
Population	23,381	10,783
Birth-rate	23·48	11·59
Death-rate	22·67	4·64
Mortality of children per mille under one year		137·86

It is obvious that these statistics, especially those of the old town, are incorrect.

The streets and roads are kept fairly clean, but house sanitation is indifferent. There were numerous latrines and urinals which could not be kept clean because the conservancy establishment had been reduced. The catchment area of the principal tank in the new town is defiled by sepoys and others. Unsanitary trades are carried on in both the towns which are several miles apart from each other.

Village sanitation is hardly touched as yet.

46. *Oodeypore*—

Population	46,693
Birth-rate	30·93
Death-rate	30·13

The Residency Surgeon considers these figures approximately correct; the sanitation is fairly good, and the drainage is excellent.

The conservancy establishment is under the Police, and some improvement has taken place, especially in the disposal of filth which is now removed to a greater distance than before.

47. *Deoli, Erinpura, Kherwara.*—These are military cantonments with small civil populations which have grown up around them. In none of the regiments is the latrine system in force. The men resort to the fields, and the practice is said not to be injurious. The subject is referred to here, because the example appears to the writer of this report to be a bad one, and the fact is certain that in the neighbouring Native States the people in most cases are worse off as regards sanitary progress, medical treatment, and submission to vaccination than in any other parts of the province. If it were not that the men in all other respects are most carefully supervised and as far as possible the bazars, it is improbable that any of these stations could remain healthy. No data for calculating birth and death rates are available. One officer states that, although immediate harm does not appear to be caused by the insanitary practices referred to, in his opinion any epidemic which attacks his station, *viz.*, Deoli, is sure to be a bad one.

48. *General Remarks.*—The subject of sanitation of the principal cities in Rajputana has been gone into rather more minutely than usual for several reasons. (1) Because the inaccuracy of the vital statistics in the capitals shows how impossible it is at present to expect that any good can be done by enforcing the collection of such information from the villages, the present difficulties being want of reliable men to secure them and of funds to pay the staff. (2) To emphasize the trials which surround the sanitarian in every direction.

Stress has not been laid upon the appalling condition, from the western point of view, of many of the large towns in which the populace would resent at present being compelled to use a latrine, because even the most wealthy males and females are now accustomed to resort to the fields and hills early each morning and in the evening to satisfy the wants of nature.

49. It is encouraging to observe that, in spite of what appears a superhuman undertaking, something is being done, and that we may hope that by degrees a reasonable amount of cleanliness may be achieved. It is possible that a general change of public opinion may begin from the schools, in many

of which the elements of sanitation are being taught. It is, therefore, suggested that all Durbars should offer prizes to school-boys for knowledge of sanitation.

VACCINATION.

TABLE 9.—*Abstract of Statements I and II.*

		Average number of Vaccinators.	Primary Vaccination.			Re-vaccination.			Cost.		Average number of operations by each vaccinator.
			Total.	Successful.	Percentage.	Total.	Successful.	Percentage.	Total.	Per successful case.	
										Pies.	
Ajmere Division	1894-95	12	13,337	13,177	98·80	19	10	52·63	1,610	23	1,113
	1895-96	12	15,583	15,384	96·24	395	344	87·09	1,397	17	1,331
Native States	1894-95	200	262,100	258,123	98·48	560	296	52·86	25,632	19	1,313
	1895-96	215	299,099	294,628	98·50	776	577	74·40	27,459	18	1,395

50. In the Ajmere Division the primary vaccinations rose from 13,337 to 15,583 cases, and 96·24 per cent of these were successful.

51. The average number of operations performed by each vaccinator rose from 1,113 to 1,331, and there was a diminution of expenditure, *viz.*, Rs. 1,397, against Rs. 1,610 in 1894-95.

The cost of each successful case was 17 pies, as compared with 23 pies in 1895.

52. The Civil Surgeon inspected 802 cases, all of which were found to be successful. The Native Superintendent inspected 7,139 cases with a percentage of success of 98·68.

53. The number of vaccinators was 12 as in the previous year.

54. Three hundred and forty-four successful re-vaccinations were performed with a percentage of success of 87·09.

55. 28·39 per thousand of the population underwent the operation of vaccination with success.

56. In Native States there was an even larger increase in primary vaccinations than last year, *viz.*, 299,099, against 262,100. The percentage of success rose from 98·48 to 98·50.

57. The average number of vaccinations performed by each vaccinator rose from 1,313 to 1,395, and the expenditure fell from 19 to 18 pies for each successful case.

58. Of the work inspected by Superintendents, 97·89 per cent were found successful, and of that by Native Superintendents 98·17.

59. Two hundred and fifteen vaccinators, or 15 more than in 1894-95, were employed. There was an increase of 9 in Jeypore, and from 4 to 6 in Bhurtpore.

60. Only 577 successful re-vaccinations were performed. It is not considered advisable to urge a second operation at present in Native States.

61. In Marwar where 77 vaccinators are employed, there was an increase from 75,753 to 87,619 vaccinations. The percentage of success was of primary vaccinations 99·52.

62. Sirohi showed an increase, and Jaisalmir a considerable falling off owing to emigration on account of famine.

63. The Superintendent, Surgeon-Lieutenant-Colonel Adams, inspected 535 villages. He considers that most of the children are now protected and remarks that the advantages of vaccination were very noticeable during the last year's epidemic of small-pox.

64. Brigade-Surgeon-Lieutenant-Colonel T. Ffrench-Mullen makes similar remarks with reference to Bikanir, where he has carried on vaccination with his usual success.

He states that when he resided in Ulwar he offered a reward to any one who would report a death from small-pox after successful vaccination, but that it was never claimed.

65. In Jeypore it has been found that the classes who dislike the operation, *viz.*, for the most part Baniahs, Jains, Musalman attendants on elephants, and some officials, suffer the most.

66. In Jeypore there was again a large increase on the figures of the preceding year, *viz.*, of 10,505 cases, the total amounting to 62,903 cases, with a percentage of success of 99·77.

67. In Bikanir there was a slight falling off, *viz.*, of 45 cases only, the total for the year being 28,228; here again emigration was the cause of diminution.

68. In Ulwar there were 26,934 primary vaccinations or 1,159 more than in the previous year; 99·95 per cent were successful.

Of 250 re-vaccinations 129 were successful.

Lymph is kept up throughout the hot weather in Ulwar (as in Jeypore, Meywar, and Bikanir), but a large supply of good animal lymph is also obtained at the beginning of the season and at other times, in accordance with a suggestion of Dr. Faulkner, lately the Agency Surgeon, by inoculating a young buffalo with human lymph; this practice is of much value where a large supply of lymph is required.

69. In Meywar 20,974 primary operations were performed, against 19,593 in the previous year.

70. In Kotah the primary vaccinations rose from 12,619 to 12,749. In Jhallawar they rose from 8,439 to 9,717, and in Bhurtpore from 13,070 to 22,305.

TABLE 10.—*Verification of Returns of Vaccination.*

* The Residency Surgeon, Western Rajputana States, also supervises the operations in the Jaisalmir and Sirohi States.

INSPECTION BY MEDICAL OFFICERS.

71. The Residency Surgeon, Jeypore, inspected 4,552 cases, of which 99·28 were successful, and the Residency Surgeon, Jodhpore, 17,345, with a percentage of success of 98·50.

The Civil Surgeon, Bikanir, saw 1,786 cases, of which 98·88 were successful, and the Residency Surgeon, Meywar, 2,514 cases, of which 99·36 were successful.

The Agency Surgeon of Kotah and Jhallawar inspected 4,087 vaccinations in Kotah and 2,101 in Jhallawar, with percentage of success, respectively, of 94·84 and 91·19.

72. The Administrative Medical Officer inspected 2,190 cases of vaccination in the principal States and found most of the work of good character, the best perhaps being in Bikanir.

73. The Agency Surgeon, Kotah and Jhallawar, contrary to the opinion of other Medical Officers of long experience in the Province, allows only two marks to be made on the arm instead of three.

As it has been conclusively proved that protection is in proportion to the number of successful marks or the total area of them, and it is of the utmost importance that failures should not occur, he has been instructed to conform to the usual practice in future. The Administrative Medical Officer's observations convinced him that the general practice in the two States abovementioned was not sufficient to afford thorough protection as the marks were not unusually large, and if they were, ulceration was frequently seen.

74. The high percentage of success in re-vaccination in Ajmere was due to the fact that small-pox was prevalent in the district which induced many persons to undergo the operation, for example, a large number of sepoys of the Merwara Battalion.

75. The Chief Commissioner of Ajmere-Merwara was pleased, under the provisions of section 3 of the Vaccination Act, XIII of 1880, to extend the Act to the Ajmere Municipality, hence vaccination has become compulsory in Ajmere city and suburbs since the beginning of the last season.

76. Small-pox began to prevail in epidemic form in Ajmere-Merwara in December 1895, and reached its maximum in March 1896 when there were 1,174 deaths for the whole district; the disease appeared to be dying out in May 1896.

77. Small-pox in like manner prevailed in Native States during the same period. In Jeypore City 202 deaths were reported for the first quarter of 1896.

SECTION II.—DISPENSARIES.

78. During the year 1895 the hospitals and dispensaries in Rajputana increased from 144 to 148.

79. There had been for some time an aided mission dispensary at Kishengarh, but the Durbar decided to support an institution of its own, which was placed under the supervision of the Residency Surgeon at Jeypore towards the end of 1895.

80. The Chiefs of Bundi, Dungarpur and Kushalgarh have also placed their dispensaries, three in all, under this office. The last two have been put directly under the Residency Surgeon, Mewyar.

81. The temporary railway dispensary at Maoli in Meywar was closed in January and no returns were submitted from it for 1895.

82. The Karauli female dispensary was reopened under an unqualified woman from 1st August to the close of the year.

83. The female dispensary at Beawar, which had been closed for about 2½ years, was also reopened by Female Hospital Assistant Bibi Asharfi on April 19th, 1895. She treated 4,875 out and 24 in-patients, but the numbers are included in those of the general dispensary.

84. The Ajmere Police Hospital was abolished as a separate institution as it was decided that the patients should be treated in the new General Hospital.

85. The General Hospital at Ajmere was formally opened by Colonel Trevor, Agent to the Governor General, on March 4th, but was not occupied until December 4th, because the new city road which leads to it was not completed until that date. The accommodation for patients is much increased in the new institution, but the staff will require strengthening, especially if a larger attendance of women and children is to be expected.

86. Two handsome dispensaries were opened at Sambhar and Mahwa in the Jeypore State in place of old buildings. There were great difficulties in regard to the former, as the town of Sambhar is the joint property of the Jeypore and Jodhpore States. The Jodhpore Durbar having, however, consented to a suitable site being set apart for the building, the Jeypore Durbar has paid all expenses of the erection of it and will maintain it, as it did the old dispensary which stood on its own property. It should be stated that the Jodhpore Durbar provides for the medical wants of the population on the northern shore of the lake at Nawa.

87. In Jeypore a new operation room and special wards are being constructed at an estimated cost of R10,311.

Several nobles of the north of the Jeypore State have promised to open dispensaries during the present year.

88. The Sirohi Durbar proposes to construct a new dispensary at Sheogunge, the village near the Erinpura Cantonment, in place of the present inadequate building.

89. New dispensary buildings were occupied at Rajgarh in the Bikanir State in May, and others are being erected at Mirzawala and Noher, the latter by the generosity of Seth Jagan Nath Thirani of that town.

The new city hospital at Bikanir and a similar building at Churu are approaching completion. Both buildings are being erected and will be furnished from funds provided for the purpose by the late Rai Bahadur Seth Bhagwan Dass. These examples of munificence deserve hearty recognition.

90. The Medical Officer at Bhurtpore reports that the dispensary buildings are in almost all cases unsuitable, dirty, and in a dilapidated condition and in bad situations.

A new hospital is under construction in the city of Bhurtpore.

The designs were prepared by Colonel Jacob, C.I.E., and the site, although in some ways perhaps not perfect, was approved by the Agent to the Governor General, the Political Agent, and the Administrative Medical Officer as being the best that could be obtained.

91. A new dispensary building was erected at Mangrol in the Kotah State. In the Jhallawar State several of the buildings are very unsuitable and new ones are therefore urgently required. The Chaoni Hospital should also be completed by the addition of verandahs.

92. A new dispensary is to be opened at Deolia in the Pertabgarh State and a new hospital building at Banswara.

93. A new hospital at Dholpore was nearly ready for use in August last, but has not yet been opened (May 1896) as it is said that a favourable day for doing so has not yet presented itself. As the present dispensary accommodation is indifferent, the Durbar has been urged to hasten its removal to the fine building which is at present quite useless.

94. The preceding remarks indicate that the Chiefs of Rajputana are fully aware of the value of medical aid for their people.

95. Table XI* is a new table which shows in a condensed form certain points connected with medical aid in the different States.

96. The sale of quinine at all Post Offices in Rajputana was continued throughout the year. So far the experiment has not been very successful. In dispensary towns it cannot be expected that the people will pay for what they can get for nothing. Gratuitous distribution by bankers and other charitable persons in some places also affects the sales. As, however, a measure of this kind always takes time for the people to understand its advantages, it is advised that it should be continued for a further period.

97. In Jeypore the Hospital Assistants are supplied with elementary books on the diseases of domestic animals and are urged to study them and to help the rural population by giving them advice in such matters whereby suffering beasts may be relieved and confidence in the doctors and their institutions increased. Many gratifying illustrations of the value of this suggestion have been reported this year.

TABLE 12.—*Cases and Deaths.*

STATEMENT II.

		CASES TREATED.		DAILY AVERAGE.		AVERAGE DURATION.		Percentage of in-door to total cases.	DEATHS	
		Indoor.	Outdoor.	Indoor.	Outdoor.	Indoor residence.	Outdoor visits.		Indoor.	Percentage to cases Indoor.
Ajmere Division	1894	811	54,981	29·36	355·32	13	2	1	122	15
	1895	831	54,401	31·34	340·74	13·76	2	1	111	13
Agency Hospitals and Salt Dispensaries.	1894	670	19,574	30·95	272·93	16	5	3	20	2
	1895	607	25,301	26·16	312·71	15·73	4·51	2·34	11	1·82
Native States	1894	13,156	836,630	554·68	7,603·56	15	3	1	398	3
	1895	14,012	889,075	605·00	7,770·87	15·76	2·39	1	370	2·63

98. Table 12 shows that 831 in-door and 54,401 out-door patients were treated in the Ajmere-Merwara dispensaries as compared with 811 and 54,981 respectively in 1894.

There was a decrease in Ajmere and increase in Merwara. The differences were however but small, and the year was a healthy one.

99. In the twelve Agency and Salt dispensaries there was a considerable increase of attendance of out-patients, *viz*, from 19,574 to 25,301, or an average daily attendance of 312·71 instead of 272·93. The death-rate and duration of

* In the appendix.

disease were, however, less. The figures point to increased usefulness of these institutions, for, although primarily intended for the treatment of Government servants, medical aid has from their first establishment never been refused in any of them when it was not readily available in the institutions of the Native States.

100. In the hospitals and dispensaries of Native States 14,012 in-door and 889,075 out-door patients were treated as compared with 13,156, and 836,630 respectively in 1894. There was therefore a substantial increase of 53,301 which occurred chiefly in the Bhurtpore, Kotah and Jhallawar States. The institutions included for the first time added however 10,926 to the total.

101. The attendance fell off in the city institutions in Jodhpore, but was maintained in the districts.

The Dholpore, Bikanir, Tonk, and Pertabgarh city dispensaries also show a decrease.

102. The percentage of deaths of in-door patients in all dispensaries fell last year.

	1895	7	...	2	27	23	23	2	·54	7	35

103. The above table shows the causes of admissions and deaths in the institutions.

104. As usual the highest percentage of admissions was due to malarial fevers and spleen diseases, though the proportion is less than in 1894.

105. The mortality was greater in all the dispensaries from respiratory diseases, but in Native States diarrhœa and dysentery proved as fatal.

106. The admissions in Ajmere-Merwara for malarial fevers and spleen diseases fell from 26 to 20, in Agency and Salt Dispensaries from 29 to 22, and in Native States from 18 to 15 per cent. The mortality, on the other hand, rose in the two former from 7 to 22 and 15 to 18 per cent. respectively, but the figures are much too small to make this of any significance, especially as the mortality returns showed fewer deaths, and in Native States also the death-rate fell from 9 to 7 per cent.

The year was, as regards the abovenamed disorders, a healthy one.

107. There is reason to believe that many fatal cases which are returned as due to fever are really owing to respiratory diseases.

108. Diseases of the eye in the Charitable Dispensaries give a pretty constant admission rate of from 10 to 12 per cent. Dirt, neglect, and the glare of the sun are chiefly responsible for these affections.

109. The percentage of admissions from respiratory affections was the same as last year except in Ajmere-Merwara where it fell from 7 to 6. The mortality in Ajmere-Merwara fell from 36 to 29 per cent., and remained the same, *viz.*, 23 per cent. in Native States. In Agency and Salt Dispensaries, in which a good many old and worn out Government servants are treated, the deaths rose from 45 to 46 per cent. In the Salt Department this is particularly marked. The work is very hard, the hours are long; moreover the men are much exposed to the sun by day and to cold by night. These remarks are the result of the experience gained in examining men employed at the Sambhar Lake for 22 years past.

110. The admissions for diarrhœa and dysentery were the same as last year, but the deaths in Ajmere-Merwara fell from 36 to 22 and in Native States rose from 21 to 23 per cent.

111. The number of cases of skin diseases was rather higher than in 1894 in all but the Agency and Salt Dispensaries.

112. The admissions for rheumatism in Agency and Salt Hospitals were higher than last year.

Ulcers were especially fatal in these institutions. The causes it is believed are indicated in a previous paragraph (109).

113. The admissions under the heads "Skin affections and ulcers" vary a good deal in different years—for example in Ajmere-Merwara in 1895 there were 6,873 cases of the former and 5,619 of the latter, whereas in 1894 the figures were 4,965 and 6,057 respectively. In the Bhurtpore State and Kotah similar conditions were observed. The differences point, when ulcers are more frequent, to impaired nutrition which is probably due to dearness of grain or unusual prevalence of malarial fevers.

TABLE 14.—*Cases of Leprosy treated in the Dispensaries of Rajputana.*

	For the year.											
	1890.		1891.		1892.		1893.		1894.		1895.

Ajmere-Merwara District .	7	67	7	79	7	87	7	77	7	21	7	26
Agency Hospitals and Salt Dispensaries . . .	...	...	...	...	11	12	11	18	12	14	12	21
Native States . . .	106	697	114	726	117	659	120	812	125	754	129	788
TOTAL .	113	764	121	805	135	758	138	907	144	789	148	835

114. The statistics relating to leprosy vary little from those of previous years and there is absolutely nothing new to report regarding the disease in Rajputana.

115. A further report was made in treatment of cases of snake bite by the hypodermic injection of strychnia, but it was concluded that no additional light was thrown on the subject during the year and the opportunities of using the remedy were rare.

TABLE 15.—*Influence of Season on Mortality.*

		PERCENTAGE OF TOTAL DEATHS AMONG IN-PATIENTS.			
		Quarters of the year.			
		First.	Second.	Third.	Fourth.
Ajmere Division	1894	24	19	28	29
	1895	16	21	22	41
Agency Hospitals and Salt Dispensaries	1894	45	...	30	25
	1895	27	27	...	46
Native States	1894	26	17	27	30
	1895	21	20	27	32

116. From the above table which shows the mortality amongst in-patients at different seasons of the year, it will be observed that the fourth quarter of 1895 was most fatal in all dispensaries. This is in accordance with an analysis that the Administrative Medical Officer made in his Medical History of Jeypore of the statistics of Ajmere-Merwara and Jeypore for the eleven years or the sun spot period, 1882—1892.

TABLE 16.—*Sex, Age and Caste.*

STATEMENT IV.

		PERCENTAGE OF THE TOTAL TREATED.				
		Men.	Women.	Children.	Hindus.	Musalmans.
Ajmere Division	1894	54	18	28	66	27
	1895	52	19	29	72	24
Agency Hospitals and Salt Dispensaries.	1894	63	16	21	50	33
	1895	63	16	21	46	34
Native States	1894	54	20	26	66	28
	1895	53	20	27	67	27

117. Table 16 shows that the proportions of men, women, and children and of Hindus and Muhammadans remained much the same as last year. In Ajmere there were, however, more women and children and fewer Musalmans. There were more children and Hindus also in Native States.

118. There is a good deal of variation in the attendance of women and children at particular institutions. This depends in some instances upon the age of the hospital assistant and his manners upon the facilities afforded or otherwise for seeing women in private, and of course in other cases upon the neighbourhood of a dispensary for women. The latter cause accounts for the small number of women seen in the Kotah, Tonk, Oodeypore, Ulwar, and Bhurtpore Hospitals. At Ajmere the Mission Dispensary for women may have some influence, but the arrangements for seeing females privately have not been

so far as good as they ought to be. In Kotputli the small attendance of women and children is due to the situation of the dispensary in a low quarter of the town. A new building is, however, nearly finished and the evil will then be remedied.

119. The above are given as illustrations, and to indicate that medical officers do not lose sight of the necessity of great attention being paid to making dispensaries attractive to females. A comparatively ignorant man, in whom age and kindly feeling have induced a proper consideration and respect for females, will often have his dispensary crowded with them, whereas a clever young hospital assistant without such qualities can hardly perhaps get any one to go near him.

120. In starting a new dispensary many nobles and inhabitants request that Hindu Hospital Assistants may be sent to them, but as the result of long experience, Brigade-Surgeon-Lieutenant-Colonel Hendley cannot admit that the religion or race of the man is of great importance provided his professional knowledge is good. There may be difficulties at first in overcoming prejudices, but a respectable and efficient man is sure to win in the end, especially if he has a good compounder of the Brahmin or any high caste, and it is seen that he does not touch the drugs himself. The case is analogous to that of cooks in the kitchens of Hindu princes where Musalmans are often employed to show Hindus how to make delicate dishes, though they do not handle the ingredients themselves.

TOTAL	171	1	272	3	1,932	29	2,583*	26

* Includes 10 major operations performed in Salt and Agency Hospitals with no death.

121. In the Ajmere-Merwara dispensaries 272 major operations were performed. In the Ajmere dispensary there was an increase of 77 cases.

No less than 170 of these operations were done on the eye against 23 in 1894. All with the exception of 8 by Surgeon-Major Mullen in the first quarter of the year, were performed by Surgeon-Major Pank.

There were three deaths, *viz.*, two at Ajmere and one at Beawar, all from stone.

122. Assistant Surgeon Rash Bihari Maitra performed 12 litholapaxy operations all of which were successful. In Ajmere there are no litholapaxy instruments, a want which should be supplied. In Ajmere there were nine operations on joints against 35 in 1894 and 2 of large abscess against 27 in 1894, from which it appears that the increase in 1895 showed improvement in the quality of the surgery as well as in its quantity.

123. In Native States dispensaries there was a considerable increase in the numbers of both major and minor operations.

There were in 1895 2,583 major and 53,434 minor operations, while in 1894 there were 1,932 and 46,827 respectively. The total deaths were 26 only or 1 per cent.

124. The increase in the major operations took place principally in Jeypore, from which State 1,091 cases were reported against 668 in the previous year.

125. In the Mayo Hospital in Jeypore 880 major operations were performed ; 48 tumours were removed with two deaths. There were 509 operations for cataract, with a percentage of success of 94·3. There were 141 other opera-

tions on the eye. The Superintendent had also 19 cases of litholapaxy. There was one other case by an Assistant with one death in a child, and 11 cases of lateral lithotomy, all of which were successful. There was one case of suprapubic operation in which a death ensued. The man was old and worn out and the calculus weighed 1,200 grains.

There were 14 amputations with one death. The total mortality was small, being at the rate of 0·7 or, excluding eye operations, 1·12 per cent.

126. Eight lithotomy operations were performed in Jodhpore city with one death, and 14 in other Marwar dispensaries with no deaths, seven in Bikanir with one death, 25 in Ulwar, five in Tonk, three in Kotah and four in Meywar, all of which were successful, and three with one death, in Deoli.

127. The lens was extracted for cataract in 714 cases of which 579 were done in the Jeypore State. Of the remainder 99 were done in Kotah and Jhallawar by Surgeon-Major J. Crofts and 13 in Oodeypore principally by Surgeon-Major Pank, who afterwards did 148 eye operations in Ajmere.

Surgeon-Captain Woolbert performed this operation eight times at Deoli. Only three were done in Marwar, four in Bikanir and five in Ulwar.

128. In the Agency and Salt Dispensaries 10 major and 1,628 minor operations were performed, a decrease of 13 of the former and increase of 439 of the latter since last year.

TABLE 18.—*Surgical Operations for Mycetoma.*

NAME OF OPERATION.	Number.

* Not attached to any hospital.

130. From the table 18 A it will be noted that some medical officers performed very few operations with their own hands, but left this important duty to subordinates whose work was often of a very trivial character.

It is hoped that the next returns will show improvement in this respect as there is no kind of medical work which renders our hospitals more popular or is more appreciated by the people, or which, perhaps, is more useful to them.

131. Some officers stated that they had been present while many of the operations had been performed and that they considered it their duty to teach the hospital assistants, who had to go into the districts, who were serving under them, but it was found that the subordinates to whom most operations are

credited had remained many years in their charges and that most work was even done by the men who served with surgeons who performed the largest number of great operations themselves.

132. A special circular on this subject has been issued with the approval of the Agent to the Governor General.

	5. On Europe medicines	53,729	48,529	17·77
	6. On diet	15,590	17,005	6·23
	7. On miscellaneous charges	14,734	14,811	5·42
	8. On buildings and repairs	43,663	71,666	26·24
	TOTAL	2,41,744	2,73,100	100

* Includes R515 paid towards the liquidation of debit balance against Kekri, Pisangan and Todgarh Dispensaries, *vide* remarks on Statement V, Part I.

TABLE 19.—*Expenditure.*—Continued.

STATEMENT V.

		1894.	1895.
		Pies.	Pies.
AJMERE DIVISION .	Cost per case treated . . .	59	43
	Cost per diet per diem . .	19	19
AGENCY HOSPITALS AND SALT DISPENSARIES.	Cost per case treated . . .	105	156
	Cost per diet per diem . .	.....	15
NATIVE STATES .	Cost per case treated . . .	54	58
	Cost per diet per diem . .	18	20

133. The above tables show the total expenditure on hospitals and dispensaries, and the invested capital in the Ajmere Division, also the cost of each case treated.

134. In the Ajmere-Merwara dispensaries expenditure fell from R17,294 to R12,267. There was an increase in Ajmere under all heads with the exception of buildings for which there is a reduction of R3,701 as the new General Hospital was completed. There was an increase in Beawar on account of the re-opening of the Female Dispensary.

135. The percentage of total cost paid by Government was R42 against R33 in 1894, which is chiefly due to expenditure under the heading of building and investment paid from the Dispensary Fund, showing a considerable decrease as compared with last year.

136. The invested capital amounted to R8,500, the same as in 1894.

137. The subscriptions from both Europeans and Natives show a decrease.

138. The financial condition of all the Ajmere district dispensaries as well as of Todgarh improved, but the Beawar Dispensary accounts showed a cash balance at the end of the year of R1,344-1-4 against R1,687-7-4 in 1894.

139. In the Abu and Abu Road Dispensaries expenditure fell from R2,057 to R1,882, there being less charge on salaries and buildings.

140. In the Political Agency and Inland Salt Revenue Dispensaries the expenditure rose from R11,074 to R12,094, chiefly under salaries of medical officers and buildings.

141. In the Native States the expenditure rose from R2,41,744 to R2,73,100. The increase was mainly on buildings and on salaries of the medical officers.

142. There was a considerable diminution in the expenditure on European medicines, which is owing to the practice of charging in some States the wholesale purchases of drugs to the year in which they are made, and not of debiting them to each dispensary as issued.

The attention of officers has been drawn to this point. It is probable that the outlay on medicines has also been diminished by the lessened average attendance of patients as it extends to bazaar drugs.

143. There was an increase under the heading " diet, " which shows that more attention has been paid to in-patients.

144. The cost per case treated fell in Ajmere from 59 to 43 pies, but rose in Agency and Salt Dispensaries from 105 to 156 pies, and in Native States from 54 to 58 pies.

145. The following sums were expended by the differnt States during the year:—

Bikanir ₹74,400 (includes ₹53,531 on buildings), Jeypore ₹56,906 includes ₹18,067 on buildings), Oodeypore ₹24,320, Jodhpore ₹23,568, Kotah ₹19,057, Bhurtpore ₹15,739, Jhallawar ₹13,048, Ulwar ₹12,963, Tonk ₹8,640, Dholpore ₹5,121, Karauli ₹4,453, Jaisalmir ₹2,003, Bundi ₹1,996, Sirohi ₹1,881, Banswara ₹1,479, Pertabgarh ₹1,129 and Shahpura ₹1,048. In the other States the expenditure was for part of the year only.

146. The Nathdwara Goshainji Maharaj, the Rao Rajah of Sikar, and the Rajhas of Khetri and Uniara and the Thakurs of Chomu and Pokurn support their own dispensaries.

147. The Maharajas of Bundi, Kishengarh and Dungarpur and the Rao of Khushalgarh now allow the returns of their dispensaries to be forwarded.

SECTION III.—JAILS.

TABLE 20.—*Cases and Deaths.*

		Number of Jails.	Average number of prisoners of all classes.	Cases in hospital.	Average daily sick.	Deaths.	Average duration of cases in days.	Percentage of deaths to cases treated.	DEATH RATE PER THOUSAND PRISONERS PER ANNUM.				
									TOTAL.	*Quarters of the year.*			
										First.	Second.	Third.	Fourth.
Ajmere Division	1894	1	333·10	98	4·66	6	17	6·12	18·01	12·00	...	12·00	48·00
	1895	1	330·78	285*	15·49	15	17	5·26	45·35	72·56	108·84	...	...
Native States	1894	17	4,383·42	5,869	144·03	124	9	2·11	28·29	30·12	17·32	32·84	32·84
	1895	19	4,556·76	3,542*	126.12	128	10	3·61	28·09	20·24	23 76	30·80	37·84

*The number of sick remaining on 31st December 1894 has been included.

148. The above table shows that the average daily number of prisoners of all classes was less than last year in Ajmere-Merwara, but more in Native States, *viz.*, 2·32 less in the former and 163·35 more in the latter.

149. The number of sick rose in the Ajmere Jail from 98 to 285, but fell in Native States from 5,869 to 3,542.

The average daily sick in Ajmere rose from 4·66 to 15·49 and fell in Native States from 144·03 to 126·12. The total deaths in the former rose from 6 to 15 and in the latter from 124 to 128. The death-rate per mille at Ajmere rose from 18·01 to 45·35, and fell in Native States from 28·29 to 28·09.

150. The first-half of the year was very fatal in the Ajmere Jail, but healthy in the prisons of Native States in which the last quarter was most fatal.

151. The rate of mortality fell in all the Jails of Native States except four, *viz.*, Jodhpore, Sirohi, Shahpura, and Pertabgarh, and ranged from 80·14 per mille in the last named to 7·16 at Ulwar and none at Jaisalmir, Karauli, and Kishengarh.

TABLE 21.

YEAR.	PRICE OF WHEAT PER RUPEE.		AJMERE DIVISION.		NATIVE STATES.	
	Seers.	Chittacks.	Average number of prisoners.	Death-rate per thousand.	Average number of prisoners.	Death-rate per thousand.
1891 . .	12	8	407·38	27·00	4,480·87	33·70
1892 . .	12	10	434·55	27·61	4,533·28	41·70
1893 . .	12	13	337·10	11·87	4,558·67	32·03
1894 . .	14	1	333·10	18·01	4,383·42	28·29
1895 . .	13	6½	330·78	45·35	4,546·77	28·15

152. From table 21 the mortality at Ajmere is shown to be most unusual, being larger than in any Jail in the Province in the quinquennium; the probable causes will be referred to later on. On the other hand, the mortality in Native States is the lowest and is mainly attributable to the prisons being less crowded and better managed than formerly.

Table 22.—Causes of Admissions and Deaths.

STATEMENT III.

		PERCENTAGE TO THE TOTAL CASES AND DEATHS.									
		Malarial fevers and spleen.	Cholera.	Rheumatism.	Diseases of the eye.	Lungs and respiratory diseases.	Dysentery and diarrhœa.	Ulcer.	Skin diseases.	Injuries.	All others.
					Cases.						
Ajmere Division .	1894 .	46	...	...	1	15	3	2	6	12	15
	1895 .	74	...	·35	1	7	1	...	1	·35	15
Native States .	1894 .	31	...	4	2	13	16	6	3	2	23
	1895 .	33	...	4	2	12	13	6	3	2	25
					Deaths.						
Ajmere Division .	1894 .	17	...	...	...	50	17	...	...	...	16
	1895 .	53	...	...	...	47	...	...	...	...	...
Native States .	1894 .	15	...	...	...	37	33	...	...	...	15
	1895 .	10	...	2	...	33	29	...	...	1	25

153. The above table shows the percentage of admissions and deaths from different diseases in all the jails in the Province.

154. In the Ajmere Jail the admissions for malarial fevers and diseases of the spleen rose from 46 to 74 and the deaths from 17 to 53 per cent. The cases returned as respiratory affections fell from 15 to 7 and the deaths from 50 to 47 per cent. There were no deaths from diarrhœa and dysentery.

155. In January an epidemic broke out in the Ajmere Jail and continued until May 1895.

156. It did not attract special attention until the Administrative Medical Officer's inspection in September. A special enquiry was then made and report submitted for the information of the Agent to the Governor General.

157. It was the opinion of the Administrative Medical Officer that the disease was a jail disease and probably of the nature of relapsing fever. It was regretted that no *post mortem* examinations were made. Instructions were issued that in all such cases in future such examinations should be made and

that prisoners on admission should undergo quarantine. It may be necessary to modify to some extent the latter order.

158. In the jails of Native States admissions from malarial fevers, etc., increased from 31 to 33, but the deaths fell from 15 to 10 per cent.; admissions from respiratory disorders fell from 13 to 12 and deaths from 37 to 33 and admissions from bowel diseases from 16 to 13 and from deaths 33 to 29 per cent. respectively.

159. There were no cases of cholera.

160. *Jodhpore.*—The favourable anticipations regarding the diminution of mortality have not been realized, as 44·22 deaths per mille occurred against 30·04 in the previous year; although the admissions fell from 974·44 to 329·20 and the average daily sick from 27·81 to 17·45 per mille.

161. It is probable that the medical attendance is defective, the Hospital Assistant having been allowed to take up additional work outside the prison. It is suggested that this should not be allowed in future.

162. *Jeypore.*—There was considerable improvement in both the Jeypore Jails. The admissions in the Central Jail fell from 606·61 to 374·30 and in the District Jail from 623·43 to 579·38 per mille of strength. The average daily sick from 33·88 to 23·67 and 21·30 to 19·01 and the death-rate from 35·77 to 24·62 and 22·70 to 18·45 respectively. The results of lessened population and careful treatment have at last become apparent.

In these jails there are three hospital assistants instead of one as at Jodhpore, whose whole time is taken up in their work in the prisons. A new yard containing a quarantine ward and a ward for females is now being added to the Central Jail.

163. *Bikanir.*—The Bikanir jail is on the whole perhaps the most healthy in the province and the most successful in Native States in its manufactures.

The admissions per mille were only 125·00 and the deaths 10·42.

164. *Oodeypore.*—The great overcrowding referred to last year has not been remedied by the construction of new barracks as proposed. The scheme is still under discussion. The drainage and surroundings have been improved.

The most urgent want is perhaps better accommodation for the women and a hospital for them.

The admissions and daily average sick were high, being 1,116·37 and 43·24 per mille, respectively, but the death-rate fell from 39·86 to 28·74.

165. *Ulwar.*—This jail improved in health in all respects.

166. *Kotah.*—The admissions rose to 1,531·09 from 1,004·21 and the average daily sick from 23·26 to 30·75 per mille, but the deaths fell from 35·72 to 31·15.

The great defect of this prison is that the end wall of each block is formed by the outer wall of the jail.

167. *Tonk, Bhurtpore, Dholpore, and Jhallawar.*—The jails of these States showed improvement in all health figures, but in years of privation and sickness outside the prisons with heavy rainfall in the three latter States, it is pretty certain a return to the old unhealthy condition must happen. It is therefore recommended that, when circumstances admit, new jails should be constructed or considerable improvements be effected in the old ones.

168. There is still much scurvy in the Jhallawar Jail, but great efforts are now being made to improve this as well as the Dholepore Jail.

169. *Karauli.*—The average daily sick in the Karauli Jail was somewhat higher than last year, but there were no deaths.

170. *Shahpura and Pertabgarh.*—The admissions and sick rate were very high in the Shahpura and Pertabgarh Jails.

171. *Jaisalmir.*—No deaths are reported from the Jaisalmir Jail, but the admissions were at the rate of 5,919·85 per mille and average daily sick 187·01.

172. *Banswara.*—The jail at Banswara is still very unhealthy.

173. *Kishengarh.*—There were no deaths in the Kishengarh Jail, which, as regards construction, is of the worst description. The Durbar has, however, sanctioned the construction of a new jail on a liberal scale and material is being collected.

174. *Bundi.*—The Bundi Jail has been improved by the addition of some buildings and is fairly healthy, though the mortality is high.

175. Progress is continually made in the Native States in the construction and management of their Central Jails and some of the district prisons and lock-ups are being improved. Special attention is now required to the latter.

176. *Reports.*—The table in which the dates of receipt of the different reports is shown is not given this year, as the information it affords is of little value, because an officer, with a small charge can, without difficulty, submit his reports and returns at an early date, whereas one with a large number of institutions which are scattered over a wide area is unable to do so.

177. The Ajmere-Merwara returns and report were received in good time and were full and interesting.

178. The Bikanir, Jodhpore and Meywar reports were concise. The two latter were somewhat wanting in detail as regards district dispensaries and the first named was the last to be received, *viz.*, on April 18th.

179. The Ulwar and Bhurtpore papers were very full; the Kotah and Jhallawar reports contained a summary of Dr. Croft's experience of the working of the dispensaries under him for some years past which he prepared for the assistance of his successor on the eve of departure on long furlough. His returns were, however, full of errors, the correction of which has much delayed the preparation of the general annual report of the province.

180. The Jeypore report as usual was printed in book form and contained a number of meteorological as well as medical tables.

181. Most of the vaccination returns and reports reached Jeypore in good time, but, owing to the fact that there are many vaccinators scattered about the larger States at great distance from head-quarters, a few returns were not received until the third and fourth week in May.

182. *Inspections.*—In accordance with Foreign Department letter No. 699 G., dated 25th April 1895, the appointment of Residency Surgeon and Chief Medical Officer in Rajputana was abolished with effect from March 29th, 1895, the date on which Dr. Newman vacated it on promotion to the rank of Surgeon-Colonel, and Brigade-Surgeon-Lieutenant-Colonel T. H. Hendley, C.I.E., was nominated to act as Administrative Medical Officer in Rajputana in addition to his own duties as Residency Surgeon at Jeypore.

183. Surgeon-Lieutenant-Colonel Adams, M.D., reverted, on the above date, to the medical charge of the Western Rajputana States Agency at Jodhpore, but officiated as Administrative Medical Officer until June 25th, when he was relieved by Dr. Hendley on return from privilege leave, who held the office until the close of the year.

184. Under the new regulations "periodical and efficient inspections of all jails and important medical inspections at the head-quarters of the several residencies and political agencies" were to be carried out.

185. In pursuance of this order all the jails and medical institutions have been inspected as follows:—

Bhurtpore, Dholepore and Kishengarh in August 1895; Ajmere in September 1895 and March 1896; Tonk in October 1895; Oodeypore, Kherwara, Jhalrapatan and the Chaoni, Kotah, Bundi and Deoli in November 1895; Erinpura, Jodhpore, Bikanir and Ulwar in January 1896.

186. Besides these, as Superintendent of Dispensaries in Jeypore, Brigade-Surgeon-Lieutenant-Colonel Hendley has inspected all the vaccination and the medical institutions (except one) and has also visited most of the district jails in Jeypore. He saw a great deal of vaccination also throughout the province.

187. The Imperial Service Corps Hospitals, and, in many cases, the men were also inspected, but in others the troops were absent from their head-quarters.

188. The hospitals and men in local corps were all inspected in the usual manner and the sanitation of each cantonment was carefully enquired into and a separate report sent in to the Sanitary Commissioner and the Officers Commanding at Deesa or Nasirabad.

189. The results of all inspections were made known to the Agent to the Governor General and the different Political Officers, whereby defects were brought to light and remedied as far as possible.

190. In accordance with the orders of Government, as laid down in letter No. 699G., dated 25th April 1895, referred to in paragraph 182 of this report, and with the view of increased efficiency in inspection of the medical institutions of the province, it was suggested by the writer of this report that the sphere of work of each Medical Officer should be made to coincide, as far as possible, with that of the Political Officer with whom he was connected.

191. During 1895, therefore, it was arranged, under the sanction of the Agent to the Governor General and with the consent of the different Durbars, that the medical inspections of the Kishengarh Dispensary and Jail should be made by the Residency Surgeon at Jeypore; and of those at Kushalgarh and Dungarpore by the Residency Surgeon, Meywar. The Abu and Abu Road Dispensaries had been previously placed under the Residency Surgeon, Western Rajputana States. The duties connected with the Karauli, Dholpore, Tonk, Bundi, and Shahpura Durbars still, however, devolve upon the Administrative Medical Officer.

192. The work of the Medical Office is reduced by its being no longer necessary to check the returns of the Jeypore and Kishengarh medical institutions, as this is already efficiently done under the Administrative Medical Officer's supervision as Superintendent of Dispensaries of those States. By this a great saving of time is effected, as 27 civil institutions out of 168 in Rajputana are concerned.

193. Instead of a monthly return of sick and expenditure from each dispensary an abbreviated return for the whole group of dispensaries under each executive medical officer is furnished by him, and as this is comparative, the figures for the preceding year and for the previous months of each year being shown, the Administrative Medical Officer is able to see at a glance the progress or otherwise that has been made in operative surgery and attendance on the sick, and also the condition of public health.

194. As the Administrative Medical Officer does not now inspect district dispensaries, a form of inspection report on each institution and on each hospital assistant has been prepared for submission to him once a year by the executive officers, so that the work of each institution and subordinate can be checked. This is very necessary, as many of the subordinates have failed to go up for their examination for promotion.

195. Notwithstanding the reductions of work which have been made, it has been found impossible to perform the office duties with two clerks. Formerly the services of hospital assistants on the reserve list were utilized when there was a great press of work, but this is irregular and injurious to the professional progress of the men. It is hoped, therefore, that a scheme which has been submitted for strengthening the office will be approved.

196. Now the head quarters of the Medical Administration have been removed to a large centre it has been found possible to ascertain the professional qualifications of new reserve hospital assistants and to instruct them in surgery and in those points in which they were weak. Moreover, as there is a first class observatory at Jeypore, they are all taught to read meteorological instruments and to prepare the returns connected with them.

197. In considering the office work, it may be useful to compare Rajputana with other provinces, as, for example, Burma.

In Rajputana with a population of 12,762,701 there are 148 hospitals and dispensaries in which, in 1895, 984,227 patients were treated, while in Burma, with a population of 8,098,014 there were 88 institutions and 571,025 patients.

Female Hospitals and Medical Education of Women.

198. *Ajmere.*—There is a Mission Female Dispensary at Ajmere under Miss Campbell, in which 3,109 new cases were treated in 1895. Miss Young also continues useful work amongst the women.

199. *Beawar.*—The Beawar Dispensary for females remained closed for 2½ years. It was re-opened on 19th April 1895 by Bibi Ashrafi, who saw 4,875 persons, of whom 24 were treated as in-door patients. She saw 25 cases in the town and attended two women in labour.

200. *Ulwar.*—Miss Dissent, M.D., succeeded Miss Crawley, L.R.C.P. & S., on 1st May 1895, and work was done throughout the year.

Eleven thousand three hundred and fifty-six cases of out-and 572 in-patients were seen and 42 major and 1,291 minor operations were performed. The lady doctor and her assistants saw a large number of cases in their own homes. In order to reach Purdah women, the class for which the Lady Dufferin hospitals primarily exist, this department should be at all times energetically worked. Very few of the in-patients who were seen at the annual inspection were true purdahnashin women.

This remark applies with even greater force to Oodeypore and Tonk.

Additions are now being made to the buildings, which it is hoped will greatly improve the hospital.

201. *Oodeypore.*—Mrs. Lonorgan died on 7th May, and until 22nd August the work devolved upon a female hospital assistant. Miss Perry arrived on that date and took over charge. The attendance naturally diminished. As a purdahnashin hospital, the buildings are defective and require alteration.

202. *Tonk.*—The hospital remained throughout the year under Miss B. B. Bose, M.B. She treated 5,802 patients and performed 53 major and 608 minor operations.

It is proposed to remedy some defects in the building, so that purdahnashin women may be seen with greater privacy.

Miss Bose continued to visit ladies at their homes. The second female pupil, who was sent by the Durbar to Agra, has returned as a compounder, having failed to qualify as a hospital assistant.

203. *Kotah.*—Miss Bessie Karim Ullah was in charge of the Victoria Hospital throughout the year.

There was an increase in the attendance of patients from 5,135 to 5,511, and of major operations from 30 to 45. Mrs. Van Ingen was for a short time at Kotah in connection with the palace.

204. *Jeypore.*—The two female hospital assistants still serve in the Mayo Hospital, and the *dhai* class has been continued with advantage. A new female medical pupil was sent to the Agra Medical School.

205. *Bhurtpore.*—Bibi Rup Kuar continues to work with success in the female dispensary, which is in a capital position in a good private house. Six thousand seven hundred and thirty-five patients were treated and there were 22 major and 138 minor operations.

206. *Jodhpore.*—It is proposed to open shortly a hospital for females at Jodhpore as a memorial of His Highness the late Maharaja.

207. *Bikanir.*—Sanction has been accorded for the employment of a female hospital assistant for the Palace, who will also work in the new hospital, where there is a handsome building with the necessary offices which is to be entirely devoted to females.

208. *Karauli.*—The dispensary for women was open for a short time at the end of the year, but has now been closed as the person in charge was unqualified and proved unsuitable. Efforts are being made to find a hospital assistant.

209. Three female hospital assistants are now required in Rajputana, but it is very difficult to find suitable persons.

210. To meet future requirements efforts are being made to obtain pupils from other provinces for whose education the Rajputana Durbars will pay.

211. The attendance of females at the larger hospitals and dispensaries is slowly increasing, but one great difficulty is felt and that is the inperfect training which assistant surgeons and hospital assistants receive in midwifery and diseases of women. Theoretically, they are no doubt taught all that is possible, but as female hospitals exist in most of the centres of medical education and a large proportion of the women and children is treated in them, the male pupils see comparatively little of diseases of women and still less of midwifery.

212. The Superintendent of Dispensaries prepared in 1895 a medico-topographical history of Jeypore, which was published at the expense of the Durbar of that State, and by the permission of His Highness the Maharaja it has been distributed to officers who are interested in sanitation and such like matters. It is also in course of republication in the Municipal Record and Sanitary Review, which is published at Amritsar.

213. The work is a complete medical history of the Jeypore State, and in it are discussed the health statistics of Jeypore and Ajmere for a long period in relation to meteorology, the fact that Jeypore contains a first class observatory presenting special facilities for conducting such an inquiry.

214. Administrative Medical Officer suggested that similar histories should be prepared by the medical officers in the other Rajputana States, so that when all the reports were finished the series might form a complete medical gazetteer of the province.

215. The proposal was approved by the Agent to the Governor-General and the Director-General of the Indian Medical Service, and the manuscript of the two following histories has been written, *viz.*, of Deoli by Surgeon-Captain Woolbert, M.B., and of Ulwar by Surgeon-Major Neilson, M.D.

216. The Ulwar, Bikanir, and Jodhpore Durbars have also sanctioned an expenditure of ₹1,500 each for the preparation of their reports.

T. H. HENDLEY, *Brig.-Surg.-Lieut.-Col., C.I.E.,*
Administrative Medical Officer in Rajputana.

JEYPORE:
Dated the 15th June 1896.

Sketch Map

,, III *Do. do. do. 22 to 51 do. do.*

N.B.—The decimal figures shew the rates of deaths from Cholera per 10,000 of population.

The fractional figures indicate the date of first case in each State, thus ½ means the 4th February.

○ *Dispensary Towns.*

× *Proposed New Dispensaries.*

T. H. HENDLEY, *Brigade Surgeon Lieut. Col., C.I.E., Administrative Medical Officer in Rajputana.*

Reg. No. 565, F. O.—Jan. 97.—141.

Where prisoners of different classes are confined in the same jail, the expenditure on Establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it, or contributing to it, and not otherwise. Hospital charges (column 7) should include rations and also the cost of medicines supplied both from the bazaar and Medical Store Depôts. In this series) Financial) annas and pies are to be shown where there are columns for them.

STATEMENT XIII (FINANCIAL).—*Showing the net cash earnings of Convicts sentenced to labour in the Central Jail at Ajmere during the year 1895.*

RAJPUTANA SANITARY, VACCINATION, DISPENSARY AND JAIL REPORT

FOR

1896.

ROYAL ASIATIC SOC.

Published by Authority.

H H-0-3a

CALCUTTA:
OFFICE OF THE SUPERINTENDENT OF GOVERNMENT PRINTING, INDIA.
1897.

CALCUTTA :
GOVERNMENT OF INDIA CENTRAL PRINTING OFFICE,
8, HASTINGS STREET.

No. 3205-G.—2 of 1897.

FROM

THE AGENT TO THE GOVERNOR-GENERAL, RAJPUTANA,

TO

THE SECRETARY TO THE GOVERNMENT OF INDIA,

FOREIGN DEPARTMENT.

Dated Abu, the 21st July 1897.

SIR,

I have the honor to submit a copy of the letter cited on the margin, from Surgeon-Lieutenant-Colonel A. Adams, M. D., Officiating Administrative Medical Officer in Rajputana, forwarding his Report for 1896, on Dispensaries, Jails and Sanitation in Rajputana and Ajmere-Merwara, and on Vaccination for the official year 1896-97, together with a note by me reviewing the Report.

No. 1800, dated 3rd July 1897.

I have the honour to be,

SIR,

Your most obedient servant,

R. J. CROSTHWAITE,

Agent to the Governor-General.

No. 1800, dated the 3rd July 1897.

From—The Administrative Medical Officer, Rajputana,

To—The First Assistant Agent to the Governor-General, Rajputana.

I have the honor to submit the Annual Report on Sanitation, Dispensaries and Jails of Rajputana for 1896, and on Vaccination for the official year 1896-97.

Mortuary Statements I to X.
Vaccination Statements I to V.
Comparative Statement of Small-pox and Vaccination.
Dispensary Statements, I, II, III, III A, supplement III A, IV, V, Parts I and II.
Jail Statements III, X, XIII, XIV and XV.

2. The statements named in the margin are appended.

3. I have drawn attention, as my predecessors have done, to the undermanned condition of my office, in the hope that the recommendations already made may shortly be accepted.

Note on the Annual Report on the Sanitation, Dispensaries and Jails of Rajputana for the year 1896, and on Vaccination for the official year 1896-97.

Rainfall.

The rainfall of Ajmere exceeded, by five inches, the average of the previous six years, and was also two inches above that of 1895, while at Beawar it was exceptionally heavy, being four inches above the average and nine inches more than that of 1895.

As regards Native States, the rainfall was below the average in Jaisalmir, Bikanir, Bhurtpore, Dholpore, Jeypore, Marwar and Sirohi. In Oodeypore, Kotah, Jhallawar and parts of the Haraoti and Tonk Agency, it exceeded the average, but was unseasonable for crops. There was scarcely any rain in September, and many promising crops consequently failed. The winter rains were light, and the water-supply in most of the States is unusually low. Many people migrated as usual with their cattle from Jaisalmir to Sind, and cattle from parts of Marwar and Bikanir were also driven towards Meywar, Kotah and Malwa in search of fodder.

Vital Statistics.

The birth-rate of Ajmere-Merwara fell from 35·29 to 32·77 *per mille* while the death-rate increased from 26·95 to 28·25 *per mille*. No satisfactory reason has been given for the decrease in the birth-rate, and it points to defective registration. The appointment of an Assistant Surgeon in the Sanitary Department is under consideration. If funds admit of the creation of this post, the registration of vital statistics will, it is hoped, show an improvement. Children under five years of age suffered more heavily than in the previous year, and accounted for 55 *per cent.* of the total deaths. This high rate of mortality is attributed chiefly to small-pox, which carried off 3,821 persons, chiefly young children.

There were fewer deaths from fevers, dysentery and diarrhœa than in the previous year, and cholera was also less prevalent. The numerous deaths from small-pox chiefly account for the increase in the death-rate as compared with the mortality for 1895.

Seventeen States attempted the registration of vital statistics as against 16 in 1896. The statistics furnished, though still obviously incorrect in many instances, are said to be an improvement on previous years.

Acting on the suggestion of the Government of India, the Jodhpore and Jeypore Darbars have also appointed Medical Subordinates to superintend the registration of vital statistics. The success attained is not marked, as the death-rate in the large majority of cities exceeds the birth-rate. The figures relating to births vary from 40·13 *per mille* in Karauli City, to 2·17 in Sirohi State, and are, no doubt, inaccurate.

Cholera.

Ajmere-Merwara was practically free from cholera, only 4 sporadic cases and 3 deaths being recorded. The disease was, however, more prevalent in the Native States, where there were 6,787 cases and 3,798 deaths, as compared with 1,906 cases and 1,049 deaths in the previous year. The outbreak originated in April 1,896 in Marwar at Nawa on the Sambhar Lake; 3,931 cases and 2,327 deaths were reported in this State. A severe form of the disease appeared in Oodeypore City in May; the mortality was 620 deaths out of 826 cases. The epidemic was, it is believed, introduced from Marwar. The usual cholera map is attached.

Sanitation.

The sanitation of Ajmere is well looked after, while at Beawar the Municipal Committee propose improving the conservancy system of the town. A scheme for village sanitation in Ajmere-Merwara is receiving the attention of the local authorities.

The sanitation of Abu is well attended to. The scheme noticed in last year's report for improving the water-supply is not yet complete.

The sanitary arrangements in Jeypore, Jodhpore, Oodeypore, Kotah, Bikanir, Karauli and Ulwar continue to be satisfactorily managed, while considerable improvement has been effected in Bhurtpore. In many of the larger cities sanitation is still defective, though steps are being taken to improve it. There is an abundant water-supply in most of the capital towns. In Jodhpore the supply has been considerably increased, and it is proposed to lay down pipes in the streets and to some of the houses. A steam tramway for conservancy purposes is under construction in this city. Village sanitation, though receiving some attention in several States, is still in a backward condition, but progress in this direction must necessarily be slow.

Vaccination.

There were 15,962 primary vaccinations in the Ajmere Division against 15,583 in the previous year, and the percentage of successful cases rose from 96·24 to 96·82. Each vaccinator performed an average of 1,252 operations against 1,331 in the preceding year, and the cost of each successful case consequently rose from 17 to 22 pies. The heavy mortality from small-pox, and the fact that the number of births reported was 17,773, show that the people do not sufficiently avail themselves of the protection afforded by vaccination.

There was a decrease in the number of primary vaccinations in Native States, which fell from 299,099 to 273,413. The decrease is attributed to migration from some of the districts affected with scarcity, and also to the difficulty of travelling about and carrying on vaccination work in places where the water-supply was deficient.

The percentage of successful cases was the same as in the previous year, *viz.*, 98·50. Each vaccinator performed on an average 1,171 operations, against 1,395 in the preceding year, and the cost of each successful case rose from 18 to 21 pies. Marwar again heads the list with the largest number of vaccinations. In most States there was a general falling off in the number of vaccinations, due principally to the prevailing scarcity; but in Jeypore the decrease is also attributed to the indolence of the vaccinators.

There was also an unaccountable falling off in the number of persons vaccinated in Kotah and Jhallawar.

The total expenditure on vaccination in Ajmere-Merwara increased from Rs. 1,397 to Rs. 1,869-13-9, while in Native States it rose from Rs. 27,459 to Rs. 30,169-3-4.

Considering the great mortality caused by small-pox, I consider that medical officers should endeavour to extend the use of vaccination, and carefully supervise the work of the vaccinators.

Dispensaries.

There were 149 Medical Institutions in the Province, against 148 in the previous year. In addition to this, there were 5 Mission and 6 Railway Hospitals. The female dispensary at Karauli has been closed, as no female hospital assistant can be obtained to take charge of it. The 'Jaswant' Hospital for Women at Jodhpore, and a dispensary at Bali, were opened during the year, while the

'Bhagwan Dass' Hospital in Bikanir, and a new hospital in Dholpore were also completed and opened. Several hospitals and dispensaries were improved and enlarged. It is proposed to open two new dispensaries in Jodhpore, also one at Mandalgarh in Oodeypore. Hospitals are being built at Sirohi, Bhurtpore and Banswara.

Nine hundred and sixty-five in-patients and 56,604 out-patients were treated at the Ajmere-Merwara dispensaries, as compared with 831 and 54,401 respectively in the previous year. The corresponding figures for the Agency and Salt dispensaries were 781 and 22,715, against 607 and 25,301 in 1895. The decrease in the number of out-patients is due to the reduction of Agency Hospitals from 12 to 11, by the transfer of the Bikanir Agency Dispensary to the list of Native States' Institutions.

In Native States' Institutions 13,890 in, and 889,308 out-patients were treated as compared with 14,012, and 8,89,075, respectively, in the preceding year, The slight falling off in the number of in-patients is probably due to the prevailing scarcity and consequent migration of people from the affected areas in Western Rajputana.

In addition to the Medical Institutions mentioned above, there are four Mission Hospitals in the Province, *viz.*, at Ajmere, Jodhpore, Oodeypore and Nasirabad. In these hospitals 198;337 out, and 898 in-door patients were treated, and 4,605 operations performed. Twenty-three thousand and ninety-two patients attended the 5 Railway Hospitals. Malarial fevers and spleen diseases, as usual, accounted for the greater number of admissions in all the dispensaries, but, as in the previous year, the highest mortality was due to diseases of the lungs and respiratory organs, except in the Ajmere division, where diarrhœa and dysentery proved most fatal, accounting for 27 per cent. of the deaths against 22 per cent. last year. These diseases were not so deadly in Native States as in the previous year, and the percentage fell from 23 to 20. Eight hundred and forty-two cases of leprosy were treated during the year, against 835 in 1895.

The treatment of snake-bite by the hypodermic injection of strychnia does not appear to have been as successful in Rajputana as was anticipated. Observations in Rajputana tend to show that the drug acts merely as a stimulant and has no specific antidotal properties.

There were 3,242 surgical operations performed in the Ajmere division, with 9 deaths. In Native States the number recorded was 59,133, including 1,033 performed in the Agency and Salt Dispensaries, with 43 deaths. These figures cannot be compared with those of last year, as the revised nomenclature of diseases introduced this year includes both major and minor operations, while the figures for 1895 only represented major operations.

Quinine was offered for sale at 132, against 118, Post Offices last year. Three hundred and fifty-nine parcels containing 36,618 doses were sold, against 341 parcels of 34,782 doses in 1895. The continuance of the scheme for a further period has been sanctioned.

Expenditure.

The expenditure on the dispensaries in Ajmere-Merwara fell from Rs. 12,267 to Rs. 11,445, while the expenditure on the Agency and Salt Dispensaries amounted to Rs. 11,158, against Rs. 12,094 in the previous year. There was, however, an increase in the expenditure on the up-keep of the Medical Institutions in Native States the amount spent being Rs. 2,99,326, as compared with Rs. 2,73,100 in 1895. The increase was mainly due to the construction of the Bhagwan Dass Hospital at Bikanir.

Plague.

The first portion of the Report under this section deals with the outbreak of plague in Pali of Marwar, and its subsequent spread to other places in Rajputana during 1836-37. The records relating to the spread and subsequent disappearance of this epidemic are missing; but the report under review contains a careful account of the first outbreak of the disease. During 1896-97 many thousands of people migrated from Bombay in the direction of Marwar, Bikanir, Sirohi, Jaisalmir and Ajmere to escape the plague.

Every precaution was taken to guard against the spread of the disease in Rajputana. Segregation camps were erected at all the important places along the line of Railway, and the Marwar and some other Durbars issued instructions that all refugees from infected areas were to be quarantined on the borders of the State for ten days. This order, though not always carried out, had a wholesome effect. All travellers by rail from the direction of the Bombay Presidency were subjected to an inspection by an European Medical Officer on the platforms of the Ajmere and Bandikui Railway Stations. At many of the smaller stations, medical subordinates were in attendance on the arrival of all down trains and kept a watch for suspicious cases among the passengers. The disease broke out in an epidemic form in Palanpur, on the borders of Rajputana, and many people fled to Abu Road, Marwar Junction, Ajmere and Jeypore. They were kept in quarantine at these places for a time, and in some cases were, at their own request, sent back to Palanpur. The pilgrim traffic to Mount Abu was entirely stopped, and a ten days' quarantine was imposed at Abu Road against all arrivals from infected areas.

Sixteen deaths from plague or suspected plague were reported in Rajputana, *viz.*, 4 at Abu Road, 2 at Jawalia, 3 at Marwar Junction, 1 at Beawar, 2 at Ajmere, 1 at Phalera, 2 at Jeypore and 1 at Nadbai, near Bhurtpore. These were all imported cases, and were mostly passengers taken out of trains.

Jails.

There was a still further decrease in the daily average number of prisoners in the Ajmere jail, which fell from 330·78 to 301·77. The admissions to hospital fell from 285 to 69, and the death-rate from 45·35 to 13·26 *per mille*. There was very little sickness in the jail, and the mortality was low.

Returns were received from twenty Native State jails, against nineteen last year. The daily average number of prisoners in these jails rose from 4,556·76 to 4,792·23, and the admissions to hospital also rose from 3,542 to 5,750. There was only a very slight increase in the death-rate which rose from 28·09 to 28·17 *per mille*.

There were no deaths in the Tonk and Kishengarh jails, and the death-rate at Pertabgarh fell from 80·14 to 59·93 *per mille*, while at Karauli the rate was 25·52 *per mille* against no deaths last year. The rate of mortality fell in the jails at Jeypore, Bikanir, Dungarpore, Jodhpore, Bundi, Jhallawar and Sirohi, and rose in those at Ulwar, Karauli, Oodeypore, Kotah, Dholpore, Bhurtpore, Jaisalmir, Shahpura and Banswara. The mortality in the Banswara jail was abnormally high, and is said to have reached the rate of of 131·60 *per mille*. Enquiry as to the cause of this heavy death-rate is being made. There was overcrowding in the jails at Karauli, Oodeypore, Jhalrapatan, Pertabgarh, Shahpura and Banswara, and occasionally at Jodhpore. Plans for a new jail at Kishengarh have been drawn up, and the work will be carried out shortly.

Female Hospitals and Medical Education of Women.

Miss Campbell and Miss Young continue to do useful work in the Mission Hospital for women at Ajmere. The female dispensary at Beawar was not opened till November last, when female

Hospital Assistant Champa Bai was appointed to hold charge of it. Miss Perry held charge of the Walter Hospital for Women at Oodeypore, and Miss Dissent, M. D., superintended the Lady Dufferin Hospital at Ulwar, and did good work. The Walter Hospital for Women at Tonk was in charge of Miss Bose, M. B., throughout the year. The Karauli Dispensary was closed in February 1896, and has not since been reopened for want of a female Hospital Assistant to take charge of it. Bibi Rup Kuar has worked well at the female dispensary at Bhurtpore, of which she held charge throughout the year. The Jaswant Hospital for Women was opened in November last by Her Excellency the Countess of Elgin, and was placed in charge of Miss Adams, M. D., who, during the short time she has been there, has done good work both at the hospital and at the houses of the purdah women of Jodhpore. Miss Bessie Karimullah held charge of the Victoria Hospital at Kotah, and is favourably reported on.

Considerable difficulty is experienced in obtaining the services of female medical subordinates, and there are at present five vacancies for women of this class. These appointments are not likely to be filled until the female practitioners now engaged on plague duty are available. Two female pupils are being educated by the Bikanir Durbar, and one by the Jeypore Durbar at the Agra Medical School.

Inspections.

Brigade-Surgeon-Lieutenant-Colonel T. H. Hendley, C.I.E., held charge of the Office of Administrative Medical Officer, Rajputana, in addition to his duties of Residency Surgeon, Jeypore, till the 12th of February 1897, when he left on being appointed to officiate as Inspector-General of Civil Hospitals in the North-Western Provinces and Oudh. Surgeon-Major H. N. V. Harington then held charge till the 4th of March, when Surgeon-Lieutenant-Colonel A. Adams was appointed to officiate as Administrative Medical Officer, in addition to his appointment of Residency Surgeon, Jodhpore. Doctor Hendley carried out his inspections at Ajmere, Oodeypore, Kherwara, Jodhpore, Bikanir, Ulwar, Tonk and Karauli, and Doctor Adams visited Dholpore, Bhurtpore, Deoli, Kotah and Jhallawar. He also from time to time inspected the plague segregation camps at Mount Abu, Abu Road, Pindwara, Nana, Marwar Junction, Jodhpore, Beawar, Ajmere, Phalera, Jeypore, Bandikui, Nadbai, Bhurtpore, Dholpore and Ulwar, and also the coolies on several famine relief works.

ABU;
The 21st July 1897.

R. J. CROSTHWAITE,
Agent to the Governor-General, Rajputana.

REPORT

ON

THE ADMINISTRATION OF RAJPUTANA

(SANITARY, VACCINATION, DISPENSARY AND JAIL)

FOR

1896.

SECTION I.—SANITATION AND VACCINATION.

METEOROLOGY AND ITS RELATION TO FOOD-SUPPLY.

TABLE 1.—*Rainfall of Ajmere and Beawar.*

YEAR.	Place.	INCHES.			
		January to May.	June to September.	October to December.	TOTAL.
1896	Ajmere.	·30	24·38	1·78	26·46
Average of six previous years	Ajmere.	1·82	18·64	·97	21·43
1896	Beawar.	·19	23·12	1·20	24 51
Average of six previous years	Beawar.	1·45	17·59	1·05	20·09

The rainfall of Ajmere was 5 inches above the average of the previous six years, and 2 inches more than in 1895. The rainfall of Beawar was very unusual, *viz.*, 4 inches above the average of the previous six years, and 9 inches more than that registered in 1895.

2. The Foy Sagar, from which the city of Ajmere derives its principal supply of water, was nearly filled by the monsoon rains, and there is still abundance in it for the year.

3. In most of the states of Rajputana the rainfall was below the average. In Jaisalmir only a little over 3 inches fell, and in Bikanir only a little over 8 inches were registered. In Bhurtpore and Dholepore only about half the average rainfall was registered, and in Jeypore, Marwar and Sirohi, it was a third below the usual amount. In Oodeypore, Kotah, Jhallawar and parts of the Haraoti and Tonk Agency, the rainfall exceeded the average, but it did not fall seasonably for the crops. The monsoon rains were not regularly distributed, nor did they extend over the usual period; there were almost no September rains, and many of the promising crops withered away before they reached maturity. The cold weather rains were unusually light in most parts of Rajputana, and although they mostly helped the winter crops, they did not replenish the tanks and wells, which have remained low throughout.

4. The water-supply is unusually low in most of the States of Rajputana and it is particularly scarce in Jaisalmir, Bikanir, Marwar, Bhurtpore, Dholepore and Karauli.

5. The failure of crops was particularly marked in Jaisalmir, Bikanir, the North of Marwar, Dholpore and Bhurtpore.

6. Many of the people of Jaisalmir have migrated temporarily with their flocks and herds to Sind, principally on account of the scarcity of water ; the light rain which fell was sufficient to give a crop of grass in most parts of the desert, although it was insufficient for grain crops. The cattle from parts of Marwar and Bikanir have been driven towards Meywar and Kotah, and many of the people from these parts found work in the opium fields of Kotah and Malwa during the cold weather.

TABLE 2.

YEAR.	Rainfall in inches.		AVERAGE PRICE OF BARLEY AT AJMERE AND BEAWAR PER RUPEE.				Death-rate per thousand of population.	
			Ajmere.		Beawar.			
	Ajmere.	Beawar.	Seers.	Chks.	Seers.	Chks.	Ajmere.	Beawar.
1892 . . .	20·87	30·51	17	5	17	10	42·88	33·49
1893 . . .	32·83	27·50	21	15	28	14	22·78	25·13
1894 . . .	26·99	23·70	27	3	31	11	28·59	39·59
1895 . . .	24·43	15·26	21	9	23	15	25·81	30·94
1896 . . .	26·46	24·51	14	9	15	5	28·53	27·24

7. The above table shows that prices were above the average both in Ajmere and Beawar, but that the death-rate was lower than the average of five years. The rainfall was good in both places, although the greater part of Rajputana suffered from a diminished fall.

8. Prices of grain ranged higher in many of the Native States than in Ajmere-Merwara.

VITAL STATISTICS.

TABLE 3.—*Birth-rate of population of the Ajmere Division.*

STATEMENT I.

YEAR.	POPULATION.			BIRTHS REGISTERED.			BIRTHS TO 1,000 LIVING.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
1894 . .	288,325	254,033	542,358	9,393	8,086	17,479	17·32	14·91	32·23
1895 . .	288,325	254,033	542,358	10,254	8,884	19,138	18·91	16·38	35·29
1896 . .	288,325	254,033	542,358	9,277	8,496	17,773	17·11	15·66	32·77

9. There were 17,773 births registered in Ajmere-Merwara in 1896, against 19,138 in the previous year, and 17,479 in 1894. Of the total births registered 52·20 per cent. were males and 47·80 females. The birth-rate was 32·77 *per mille*, against 35·29 in the previous year, and 32·23 in 1894.

10. The birth-rate exceeded the death-rate in 17 out of 23 circles, against 20 in the previous year, and the total birth-rate exceeded the total death-rate by 4·52 *per mille*, against 8·34 in 1895.

TABLE 4.—*Death-rate of population of Ajmere-Merwara.*

STATEMENTS II TO X.

YEAR.	DEATH-RATE PER THOUSAND POPULATION PER ANNUM.													PERCENTAGE AMONG TOTAL DEATHS.									
		SEX.		SEASON.				CAUSES.						AGE.									
				Quarters of the year.																			
	Total.	Male.	Female.	First.	Second.	Third.	Fourth.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	Under 1 year.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 30	30 and under 40.	40 and under 50.	50 and under 60.	60 and upwards.
1894 .	31·02	31·44	30·55	44·96	27·76	24·56	26·80	...	·80	25·54	·93	·57	3·16	25	18	5	2	3	8	9	10	11	9
1895 .	26·95	27·25	26·59	28·00	27·92	22·44	29·44	·53	1·39	20·77	·95	·76	2·55	29	15	4	3	4	9	8	9	10	9
1896 .	28·25	28·42	28·06	45·96	26·84	20·56	19·64	·02	7·05	17·34	·70	·52	2·63	30	25	5	2	3	6	7	7	8	7

11. This table shows the death-rate according to sexes, seasons, causes and age.

12. There were 15,321 deaths registered in this division during the year against 14,614 in 1895, an increase of 707. This gives a death-rate of 28·25 *per mille* of population against 26·95 in the previous year. The highest mortality was recorded in the first and the lowest in the fourth quarter, while in 1895, the highest mortality occurred in the fourth and the lowest in the third quarter. The monsoon was over unusually early in 1896, and the months of October, November, and December were consequently very healthy. As in the previous year, the death-rate was slightly higher among Hindus than among Mahomedans, *viz.*, 28·45 against 27·81 *per mille*.

13. Cholera was less prevalent and less fatal in Ajmere-Merwara than in the previous year, but there was a great increase in the mortality from small-pox, which caused 7·05 deaths in 1896, against 1·39 deaths *per mille* in 1895. The highest death-rate from small-pox was in Goella and the lowest in Beawar Town. In the latter vaccination is better supervised and more general than in the former, which readily accounts for the difference in severity of the disease.

14. The death-rate from fevers, dysentery and diarrhœa, was below that of the previous year.

15. The mortality in children under five years of age was much higher than in the previous year, *viz.*, 55 against 44 per cent. of the total deaths recorded; this high mortality was mainly due to small-pox, 3,821 deaths having occurred from this cause alone, and these chiefly among young children.

16. The deaths exceeded the births in six of the 23 circles against three in the previous year, and this is unsatisfactory. Some circles show considerable improvement in the registration of Vital Statistics, while in others there is a retrograde tendency; more careful supervision is necessary, and the female birth-rate especially calls for attention, as it is obviously below what it should be.

17. It is now proposed to employ an Assistant Surgeon in the Sanitary Department of Ajmere-Merwara, and to require him to superintend the

registration of births and deaths; it is hoped this professional supervision will improve the statistics.

TABLE 5.—*Deaths according to diseases in the Ajmere Division.*

STATEMENT VI.

YEAR.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others	Total.
1894 . . .	...	437	13,855	506	310	1,717	16,825
1895 . . .	289	754	11,263	512	413	1,383	14,614
1896 . . .	12	3,821	9,403	379	280	1,426	15,321

18. This table shows the deaths according to diseases in the Ajmere Division.

19. There were 1,860 fewer deaths from fevers than in the previous year, and the deaths from these causes were nearly a third less than in 1894; the deaths from cholera, dysentery and diarrhœa, were also much below those shown in the corresponding columns of the previous year, but small-pox added unusually to the death-rate.

TABLE 6.—*Quarterly deaths from Cholera and Small-pox in the Ajmere Division.*

STATEMENTS VII AND VIII.

	QUARTERS OF THE YEAR.				Total.
	First.	Second.	Third.	Fourth.	
Small-pox	2,636	1,088	67	30	3,821
Cholera	...	7	5	...	12

20. This table shows the quarterly deaths from cholera and small-pox in the Ajmere Division.

21. Small-pox was epidemic in Ajmere-Merwara during the first and second quarters, and there were many cases and deaths in the third and fourth quarters: 3,821 deaths were registered from this disease, and these were mostly amongst young children. Of these deaths 3,282 occurred in rural circles and 539 in towns; amongst children under one year there were 1,244 fatal cases of small-pox, and this great waste of young life was due to ignorance and prejudice against early vaccination, which could have effectually prevented it.

22. There were only a few sporadic cases of cholera in this division during the year under report, and the previous year was fairly free from this disease also. The new and good water-supply has already done much to protect Ajmere against cholera and typhoid fever, which diseases were formerly often very prevalent there.

TABLE 7.—*Births and deaths in Native States.*

NAME.		Population according to census of 1891.	BIRTHS.				DEATHS.								
			Male.	Female.	Total.	Ratio per 1,000 of population.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Snake-bite.	Injuries.	All others.	Total.	Ratio per 1,000 of population.

	TOTAL	3,104,044	25,966	21,821	47,787	15·39	1,592	4,021	26,248	4,605	152	296	9,293	48,233	15·54

NOTE.—The information required for this table cannot be obtained in full from Jaisalmir. The total, therefore, of column 14 does not agree with the totals of the seven preceding columns.

23. The above table shows the registration of Vital Statistics in the Native States of Rajputana. Registration was attempted in 17 States, one more than in 1896.

24. The birth-rate in towns ranged from 40·13 *per mille* in Karauli to 9·49 in Tonk, and in rural circles from 22·13 in Meywar to 2·17 in Sirohi; the average for all the States was 15·39 *per mille* of population.

25. The death-rate in towns ranged from 47·46 *per mille* in Kotah to 13·50 in Tonk, and in rural circles from 24·06 in Pertabgarh to 3·17 in Sirohi; the average death-rate was 15·54.

26. More deaths from fevers were registered in Native States than in the previous year, *viz.*, 26,248, against 25,295, and also from dysentery and diarrhœa, *viz.*, 4,605 against 4,354. Small-pox and cholera were both more prevalent than in the previous year; 4,021 deaths from small-pox were registered, against 1,929 in 1895, and 1,592 deaths from cholera against 77 in the previous year.

27. Although many of the figures in the above table are obviously very incorrect, they are in some instances an improvement on the returns of previous years, and endeavours are being made to obtain accurate statistics from the Native States of Rajputana. It is hoped the progress noted above will be continued yearly, till reliable statistics are produced. It is however very difficult

to obtain accurate data from any of the people of Rajputana, on account of their many prejudices and their reticence with regard to their domestic occurrences; moreover, the agencies for collecting these data are still far from perfect in Native States, so the spread of education and time must be relied upon to remove many of the defects which now exist in the Vital Statistics of this province.

28. As recommended in the review of the Government of India on this report for 1894, medical subordinates have been employed in Jodhpore and Jeypore to superintend the registration of Vital Statistics, and it is hoped that this professional supervision will be attended with good results.

29. Attention will be drawn to the many defects in the returns of the year under report.

30. The death-rates are generally more accurate than the birth-rates, as it is less difficult to get deaths reported; the births of female children are specially suppressed, as girls are still looked upon as a great discredit to parents and the household in general.

TABLE 8.—*Number of Cholera cases reported in Ajmere-Merwara and in Native States during the year 1896.*

NAME.	JANUARY.		FEBRUARY.		MARCH.		APRIL.		MAY.		JUNE.		JULY.		AUGUST.		SEPTEMBER.		OCTOBER.		TOTAL.		Percentage of deaths to cases.

31. The above table shows the cases of cholera reported and the deaths from this cause in Ajmere-Merwara and the Native States of Rajputana during the year 1896.

32. There were 6,791 cases and 3,801 deaths reported, against 2,354 cases and 1,338 deaths in the previous year; in 1896, 55·97 per cent. of the cases were fatal, against 56·84 per cent. in the previous year. There were only 4 sporadic cases and 3 deaths reported from Ajmere-Merwara, but the disease showed itself in eight States, *viz.*, Bikanir, Marwar, Meywar, Jhallawar, Kotah, Sirohi, Bhurtpore, and Dungarpore; both Marwar and Meywar had severe outbreaks.

33. Cholera broke out in Bikanir in November 1895, and there were 194 cases with 90 deaths from the 1st January to the end of May 1896, when it stopped in that State.

34. Cholera broke out in Marwar at Nawa on the Sambhar lake where 3,000 coolies were employed, on the 6th of April 1896, and extended into 16 parganas of this State; between the above date and the end of October 3,931 cases and 2,327 deaths occurred. As soon as the disease showed itself in epidemic form the work people dispersed to their villages, but the towns-people were attacked, and the disease lingered about Nawa for a couple of weeks. The wells were freely treated with permanganate of potash, and great efforts were

made to prevent the spread of the disease wherever it appeared in this State; still the epidemic was severe.

35. Cholera broke out in Oodeypore City in epidemic form on the 7th of May: between that date and the 9th of June, 826 cases and 620 deaths were reported. The Residency Surgeon found that most of the people attacked were in the habit of taking their drinking water from Pichola lake, on the west of the city, which was then low and dirty, and which was used to bathe in, as well as for drinking purposes. Even the outbreak in the Jail was traced to the first affected having drunk this unwholesome water. The disease spread to ten villages, and Nathdwara, the great resort of pilgrims, became infected, though slightly. There were 1,350 cases and 710 deaths reported, and it is remarkable that the death-rate in the city was over 75 per cent. while that in villages was only a little over 17 per cent. of those attacked. Great efforts were made in Oodeypore City to lessen the outbreak, the wells were disinfected with permanganate of potash, the sanitation was improved in every possible way; the people became panic striken and adopted many precautions that they would not otherwise have accepted, and the epidemic was no doubt shortened in this way. Calomel, sulphuric acid and cantharides were the remedies found most useful. The disease was believed to have been introduced into Oodeypore by a wedding party from Marwar. This party arrived in the city of Oodeypore on the 16th April, and remained till the 26th of the month, during which time three deaths took place among them.

36. Cholera broke out in Jhallawar in the middle of June and continued till the end of August, 743 cases and 405 deaths were reported. In this instance the city death-rate was much less than that of the 13 villages attacked, *viz.*, 48·61 against 56·93 per cent.

37. There were 116 cases and 54 deaths from cholera in 5 villages of Sirohi between the 8th of May and the 24th of June; there were 65 cases and 46 deaths in Bhurtpore in August; there were 252 cases and 95 deaths in Kotah City and five villages from the middle of July to the end of October, and there were 136 cases and 71 deaths in Doongarpore City in July, August, and September.

38. This epidemic was undoubtedly started in Marwar by coolies from Bikanir coming to work at Nawa on the new salt pans in the Sambhar lake. As soon as the disease assumed a severe form, the coolies dispersed to their villages, and although they saved themselves in many instances, they spread the disease widely throughout Marwar, from whence it extended into Sirohi, Oodeypore and other States.

39. Dr. Adams visited Nawa where the 3,000 coolies had been at work; he found everything favourable for an outbreak of cholera, and recommended that new hands should not be collected under the conditions which then existed, as any gathering together of people must have given rise to more cases of the disease which had then extended to the people of the town.

40. Many people fled from the town of Nawa when the disease extended into it, otherwise the mortality must have been greater notwithstanding the disinfection of the wells by permanganate of potash, and other sanitary measures carried out to mitigate the virulence of the epidemic.

41. The coolies who had been on the works had erected their temporary shelters away from the town in a low-lying marsh with stagnant pools scattered about, from which they drank for convenience, and also in which they washed themselves.

42. A cholera map is attached which will show the districts infected, the dates of first and last cases, the death-rate per 10,000 of population, and the position of all the dispensary towns.

SANITATION.

43. *Ajmere Division*—

Ajmere	Population	41,416	Suburbs	27,427
	Birth-rate	35·18	„	31·32
	Death-rate	34·40	„	27·56

The Foy Sagar was nearly filled by the monsoon rains, and there is abundance of good water in it for both the city and suburbs of Ajmere. Attention is now being given to its surroundings to prevent its contamination by cultivators and graziers. The Administrative Medical Officer has recommended the removal of some adjacent villages, when funds become available, as these are sources of contamination, and causes of the excess of organic matter which has been found in the water when the lake has been low.

44. The conservancy system of Ajmere City has worked well during the year; the tramway and trenching grounds have been kept in good order; new pattern carts have been introduced for the removal of refuse water; the Masuda tank is being filled up, as it was both unsightly and detrimental to the public health.

45. *Beawar*—

Population	20,978
Birth-rate	40·18
Death-rate	31·89

The Municipal Committee continues to supervise sanitation in Beawar, the streets are clean and well kept, the water-supply is from wells and of good quality, and it is proposed to improve the conservancy system as well as the public and private latrines.

46. A scheme for village sanitation in Ajmere-Merwara is engaging the attention of the Commissioner. It is proposed to appoint a specially qualified Assistant Surgeon to the charge of the Sanitary Department under the Civil Surgeon, Ajmere, who will be expected to spend most of his time on tour, advising in sanitary measures throughout the district.

47. *Mount Abu and Abu Road.*—The sanitary arrangements of Mount Abu are well directed by the Magistrate, advised by the Local Municipal Committee and the Residency Surgeon, Western Rajputana States. Much attention is given to drainage, conservancy, and the prevention of overcrowding, to which there is a great tendency in the hot weather. It is hoped that the Trevor Sagar, now being completed by the Sirohi Durbar, will improve the water-supply, which is generally low in the dry season.

48. The town of Karari, at Abu Road Station, has been drained during the year by the Sirohi Durbar; greater attention is being given to conservancy there, and many of the recommendations of the Residency Surgeon, Western Rajputana States, have lately been carried out by the Local Magistrate in charge of the town.

NATIVE STATES.

49. *Jodhpore*—

Population	61,849
Birth-rate	13·81
Death-rate	19·01

The water-supply of the City of Jodhpore has lately been greatly increased and improved, and it is now proposed to distribute this to the streets and some of the houses through pipes, in honour of the Diamond Jubilee of Her Majesty the Queen-Empress. New latrines have been added during the year, for the suburbs, to the public system already in use, and a steam tramway is under construction for sanitary purposes. An Hospital Assistant has been appointed to supervise sanitation in the districts, and village sanitation is now receiving some attention. The vaccinators have been instructed in elimentary sanitation to enable them to advise the villagers among whom their ordinary duties lie. The Durbar grant of ₹1,500 a month is continued to the Municipal Committee, and ₹100 to the town of Pali for conservancy purposes.

50. The Residency Surgeon continues to preside over the Municipal Committee of Jodhpore.

51. *Sirohi*—

Population	6,207
Birth-rate	11·12
Death-rate	17·88

The Sirohi Durbar has completed a new lake, the Abbott Sagar, to improve the water-supply of that city; the natural drainage of the city is good, and some attention is given to sanitation. Village sanitation is very backward, but it is receiving more consideration than hitherto.

52. *Jaisalmir*—

Population	10,509
Birth-rate	32·35
Death-rate	37·20

Great efforts are being made to increase the water-supply of this desert city, and also of some of the district towns. This capital has recently been much improved by drains and made roads, and its sanitation has been greatly improved thereby. The population is very healthy, and although the monsoon fails two years out of five, and the general condition of the country is one of scarcity, the people are always bright and lively, and they never seem discouraged by failure of crops or a scanty water-supply. Village sanitation is backward, but the country is sparsely populated, and epidemic disease rare; some attention is now given to the protection of drinking water and the cleaning of villages.

53. *Jeypore*—

Population, Intramural	132,521
Birth-rate	34·72
Death-rate	43·50

This city has for a long time enjoyed a good water supply, and it is now proposed to filter it. The city is well drained, and there is a good conservancy system in force, which has greatly improved the sanitary condition of both the city and suburbs. An Assistant Surgeon has been appointed to supervise village sanitation, which is still very backward; he has been provided with a bacteriological laboratory at considerable cost, which he will work in addition to inspecting villages, and advising on sanitary measures.

54. *Bikanir*—

Population	56,252
Birth-rate	30·74
Death-rate	26 64

There is an excellent water-supply at this capital, from very deep wells, which never fail even in the driest season, and on which the monsoon seems to have no effect.

55. The sanitation of the town is supervised by a Sanitary Inspector under a Municipal Committee and the Agency Surgeon; it is fairly good. It is proposed to improve both the drainage and conservancy system shortly.

56. *Bhurtpore*—

Population	68,033
Birth-rate	29·72
Death-rate	24·94

A Municipal Committee has lately been appointed for this city; the drainage and conservancy have been much improved during the year under report. The Medical Officer on special duty there has done much in organizing a sanitary department, and in superintending the carrying out of reforms.

57. The water-supply, which is from wells, is bad, and it is proposed to give an improved water-supply to the city and suburbs as soon as funds become available. Village sanitation is very backward.

58. *Ulwar*—

Population	52,398
Birth-rate	27·65
Death-rate	34·92

The water-supply is from wells; it is abundant and fairly good. There is a good conservancy system in force under the Municipal Committee and Agency Surgeon, and the drainage is good. Village sanitation is progressing satisfactorily.

59. *Dholpore*—

Population	9,739
Birth-rate	33·57
Death-rate	30·80

The water-supply is from wells, and of fairly good quality, it is also abundant. The conservancy system is primitive, and some offensive trades are carried on in the town. There is not much attention given to the drainage of the town, and village sanitation has not yet received much consideration.

60. *Karauli*—

Population	23,124
Birth-rate	40·13
Death-rate	24·65

The water-supply is from wells, some of which are good, and the supply of water is sufficient. The city is clean and naturally well drained; the Members of the Municipal Committee take considerable interest in the conservancy of the city, and new latrines for women have lately been constructed. Insanitary trades are however still carried on within the city walls, and latrines for men are very much needed.

61. *Kotah*—

Population	38,624
Birth-rate	34·23
Death-rate	47·46

A new scheme for supplying the City of Kotah with pure water is nearly matured; the supply now available is of bad quality, though abundant.

62. The Municipal Committee superintends the conservancy arrangements, the drainage is fairly good, the city is clean, and no insanitary trades are carried on within the city walls. Village sanitation is still backward, but it is receiving some attention.

63. *Oodeypore*—

Population	46,693
Birth-rate	25·94
Death-rate	44·18

The water-supply of Oodeypore City is from both tanks and wells; it is good and very abundant. Although the conservancy system has lately been improved, it is rather behind the other great capitals, and it is superintended by the police only; offensive trades are still carried on within city limits, and the drainage, though naturally good, could be improved by artificial means, especially at one corner of the city. Village sanitation does not receive much attention, but some of the large towns are regularly cleaned.

64. *Tonk*—

Population	46,069
Birth-rate	9·49
Death-rate	13·50

There is a good supply of water from a river a short distance from the town, and an inferior supply from wells in and about the town. Public sweepers are employed to keep the town clean; the night-soil is mixed with ashes and clay and removed to the fields on the backs of animals, where it is ploughed in by the cultivators. Insanitary trades are carried on inside the town, and too little attention is given to village sanitation.

65. *Bundi*—

Population	22,544
Birth-rate	10·42
Death-rate	10·80

There is a fair water-supply from wells and tanks, but it sometimes becomes scarce in the hot weather. The sanitary arrangements are under a Munsarim; the principal streets are kept fairly clean, and the natural drainage is very good. A larger staff of public sweepers is required, and carts should be introduced to remove the refuse and night-soil. Village sanitation also requires attention.

66. *Jhalrapatan*—

	Old.	New.
Population	10,783	23,381
Birth-rate	11·87	16·38
Death-rate	21·05	19·46

There is an abundant and good supply of water from wells and tanks for both towns; the drainage is good, but the conservancy establishment is insufficient for the requirements, and the towns are not so well cleaned, especially in the side streets, as they should be. Village sanitation requires more attention, and also the protection of the water-supply of the Chaoni tank. It is proposed to improve the conservancy arrangements.

67. *Kishengarh*—

Population	15,363
Birth-rate	27·08
Death-rate	17·90

There is an abundant water-supply from both wells and tanks, and it is of good quality; the natural drainage of the town is good; a Municipal Committee directs the sanitary arrangements which are still very defective, although a staff of sweepers and some conservancy carts are kept up. Village sanitation has not yet received much attention.

68. *Shahpura*—

Population	11,718
Birth-rate	27·73
Death-rate	19·79

The water-supply is from wells and a large tank, it is good and abundant; the drainage is bad and stagnant pools form in places about the town during the monsoon season; the conservancy system is defective, but the main streets are regularly cleaned.

69. *Pertabgarh*—

Population	14,819
Birth-rate	34·48
Death-rate	16·94

This town has a good and abundant supply of well water, but this is often contaminated by people being allowed to bathe in and near the wells. The sanitary arrangements are still primitive, but the town is fairly clean. Village sanitation is backward.

70. *Doongarpore*—There is an abundant water-supply from wells and tanks, and it is of good quality; the natural drainage is fair, and the town is regularly cleaned by sweepers, but village sanitation has not received much attention. Offensive trades are carried on within the town.

71. *Banswara*—

Population	8,234
Birth-rate	13·48
Death-rate	33·76

The water-supply of this town is from wells and tanks, it is abundant and good; the natural drainage of the town is fairly good, but unhealthy trades are carried on within town limits, and the conservancy system is both very primitive and very bad.

72. *Deoli, Erinpura and Kherwara.*—These are the Military Cantonments of three of the local regiments of Rajputana, and there is a considerable civil population of tradespeople and others in each. Latrines have not yet been introduced into any of these cantonments, on account of the expense this would entail, so the men resort to the fields adjacent, and this has been condemned. This primitive custom should be remedied, as soon as funds can be obtained, by the organisation of a good conservancy system with ample latrine accommodation, both on account of its advantages from a health point of view, and as an example to the Native States around. These cantonments are otherwise in excellent order, and their healthiness is undoubtedly due to the careful supervision bestowed upon them by the officers of the regiments. Nevertheless, without a proper conservancy system there is always great danger of the water-supply becoming contaminated, and of outbreaks of epidemic disease.

73. The Medical Officers of these regiments should be encouraged to give medical and surgical aid to the civil population in and around their stations, and also to take an interest in the sanitation and vaccination of the adjacent villages, as this would not only employ their leisure, but would also materially benefit the people, and be a source of great protection to the cantonment.

74. *General Remarks.*—Undoubted and steady progress is being made in sanitation in Rajputana, especially in some of the capitals and large towns, in many of which it is now beginning to be pretty generally recognised that an observance of the laws of health materially benefits the community at large

75. Village sanitation, although still very backward, is year by year receiving more attention, and notwithstanding that the advance must at first necessarily be slow, where great ignorance, deeply-rooted prejudice, and ancient custom have to be overcome, there is nevertheless every reason to believe that with tact and patience much can be accomplished in this direction within reasonable time.

76. Residency and Agency Surgeons must not however sit at headquarters and expect their subordinates to be successful in introducing this difficult reform into villages opposed to change. Both headmen and villagers will more readily accept the dogmas of sanitary science from the medical officers themselves than from their subordinates, so it is imperative that the former should be about as much as possible in their districts, if they intend village sanitation to become anything more than a mere heading for their annual reports.

VACCINATION.

TABLE 9.—ABSTRACT OF STATEMENTS I AND II.

		Average number of vaccinators.	PRIMARY VACCINATION.			RE-VACCINATION.			COST.		Average number of operations by each vaccinator.
			Total.	Successful.	Percentage.	Total.	Successful.	Percentage.	Total.	Per successful case.	
									Rs. A. P.	Pies.	
Ajmere Division	1895-96	12	15,583	15,384	96·24	395	344	87·09	1,397 0 0	17	1,331
	1896-97	13	15,962	15,764	96·82	320	242	75·62	1,869 13 9	22	1,252
Native States	1895-96	215	299,099	294,628	98·50	776	577	74·40	27,459 0 0	18	1,395
	1896-97	234	273,413	269,300	98·50	779	464	59·56	30,169 3 4	21	1,171

77. The primary vaccination rose in the Ajmere division from 15,583 to 15,962, and the successful percentage from 96·24 to 96·82; the re-vaccinations were 320, against 395 in the previous year, and the successful percentage 75·62, against 87·09. The percentage of success was satisfactory both in primary and re-vaccinations, and the increase in the number of operations performed denotes progress.

78. The average number of operations performed by each vaccinator fell from 1,331 to 1,252, consequently the cost of each successful vaccination rose from 17 to 22 pies.

79. Grain compensation was given to the vaccinators, and travelling allowance to the Native Superintendent, which helped to enhance the cost of vaccination.

80. The vaccinators employed were 13 instead of 12 in the previous year, and there was one Native Superintendent employed as before.

81. The Civil Surgeon inspected 248 vaccinations, against 802 in the previous year, but these were all found successful.

82. Twenty-nine and a half per thousand of the population were successfully vaccinated during the year. So there is still a large number of children unprotected in Ajmere-Merwara.

83. In Native States primary vaccinations fell from 299,099 to 273,413, and this was mainly due to reduction of population on account of migration from some desert districts where the crops failed, but also to the difficulties of carrying on work in districts where water was extremely scarce.

84. Of the operations performed 98·50 per cent. were successful as in the previous year.

85. The average number of operations performed by each vaccinator fell from 1,395 to 1,171, and the cost of each successful vaccination rose from 18 to 21 pies, in consequence of the difficulties of carrying on work in some of the districts where scarcity prevailed, and of extra allowances given as compensation for dearness.

86. The Residency and Agency Surgeons found 98·76 per cent. of the vaccinations inspected by them successful, and the Native Superintendents 98·19 per cent.

87. In these States, 234 vaccinators were employed, against 215 in the previous year, an increase of 19, *viz.*, 8 in Bhurtpore, 5 in Jodhpore, 3 in Kishengarh, 1 in Meywar, 1 in Bikanir, and 1 in Doongarpore. Some of these new vaccinators were engaged late in the season, so they did not add much to the workdone.

88. Only 779 revaccinations were performed, and only 776 in the previous year. The people are still greatly opposed to re-vaccination, as they are not yet able to understand that vaccination is a different method of protection from inoculation to which they have been long accustomed, and which is only once necessary; it is therefore difficult to persuade them to submit to a second operation, even during epidemics of small-pox.

89. Although the year has not been favourable for vaccination, for reasons given above, there has nevertheless been much good work done in this department, and many of the people who have observed its protective power during the recent epidemic of small-pox have become reconciled to it. Many instances have recently come to the writer's notice of people having asked the vaccinators to operate on their children who have hitherto opposed vaccination; this is a healthy sign, and indicates progress in the future.

90. Jodhpore, Marwar, stands far in advance of the other States of Rajputana, in vaccination, as it has done for some years, and although the year under report was very unfavourable for carrying on work in this desert country, many thousand more vaccinations were performed in it than in any other State in Rajputana.

91. The vaccinators were increased by 5, *viz.*, from 77 to 82, and 77,366 primary operations were performed, 99·46 per cent. of which were successful, against 87,591 in the previous year. The falling off in numbers was due to the difficulties of carrying on work in several districts where water was scarce and grain dear, and also to diminished population in these districts from migration. In some places water was so scarce, that it had to be carried for miles on camels, and it was not advisable to keep the vaccinators long in these districts. A female vaccinator is employed, in this State, for purdah families, and this has been found to facilitate vaccination, as she is admitted where men would not have access.

92. Two sweeper vaccinators are employed to vaccinate their own caste and other low castes, as many high caste people object to have their children vaccinated by vaccinators who have come in contact with sweepers; mereover, the Brahmin vaccinators employed in Marwar often objected to work among these people, and they are the best vaccinators to employ for general work, as they have considerable influence with the people.

93. In Jeypore the primary vaccinations fell from 62,901 to 57,910, and of these 99·69 per cent. were successful. The Officiating Residency Surgeon attributes the falling off to scarcity, laziness of the vaccinators and want of supervision; but there was little scarcity in this State, and the population is not migratory; as in the previous year, 46 vaccinators were employed and the superintending staff also remained as before.

94. In Bikanir 26,648 primary vaccinations were performed, with a successful percentage of 99·71, against 27,944 in the previous year. The reduction in the number vaccinated has been rightly attributed to scarcity and diminished population as there have been two succeeding years of great failure of crops in this State, and the people are migratory under such circumstances.

95. There was one more vaccinator employed than in the previous year, *viz.*, 17 against 16.

96. In Jaisalmir 1,199 primary vaccinations were performed, 99·08 of which were successful, against 2,420 in the previous year. In this State there has been almost a complete failure of crops for two years in succession, and many of the people migrated to Sind to find employment, so the vaccinators could do little beyond the city and a few large towns, both on account of want of population and the difficulties of obtaining water in many places. Famines are so common in this desert country, that the people have got accustomed to migration, and the villages are in bad times often completely deserted for a period.

97. The primary vaccinations performed in Sirohi and Mount Abu were more than in the previous year, *viz.*, 5,678 against 5,571, and 99·40 per cent. of these were successful. Three vaccinators were employed as in the previous year, and the increase was satisfactory.

98. In Bhurtpore 20,323 primary vaccinations were performed against 22,305 in the previous year. This State suffered severely from failure of crops and it was difficult to carry on vaccination in some districts. Eight new vaccinators were appointed instead of compounders, who could not leave the dispensaries to perform the vaccination work at a distance from dispensary towns, and it is hoped vaccination will progress more satisfactorily under the new conditions than it has hitherto done.

99. In Ulwar 25,452 primary vaccinations were performed, 99·80 per cent. of which were successful, against 26,934 in the previous year. The slight falling off has been attributed to the difficulties of carrying on work in a year of scarcity.

100. In Oodeypore 20,933 primary vaccinations were performed with a successful percentage of 99·80, against 20,974 in the previous year.

101. In Kotah 10,294 primary vaccinations were performed, 96·37 per cent. of which were successful, against 12,749 in the previous year. This decrease in work is very unsatisfactory, and there was no famine in the Kotah State to account for it.

102. Each child in Kotah is now vaccinated in three places instead of two. The practice of making three vaccination marks has been followed in other States for a long time past. It is proposed to strengthen the staff of vaccinators, and this measure is undoubtedly necessary.

103. In Jhallawar 7,159 primary vaccinations were performed, 95·28 per cent. of which were successful; in Dholpore 6,273 primary vaccinations, 93·19 per cent. of which were successful; in Tonk 5,781 primary vaccinations, 99·31 per cent. of which were successful, and in Karauli 3,418 primary vaccinations, 90·49 per cent. of which were successful.

104. Vaccination has now been fairly started in Kushalgarh, Dungarpore, Shahpura, Pertabgarh and Kishengarh. The want of proper supervision in these places has been the main cause of the great backwardness; but it is hoped vaccination will now receive more attention, and that Residency Surgeons will give some time to its supervision in their secondary charges.

105. Lymph is kept up throughout the year in most of the important States by carrying on vaccination in cool places during the hot weather. In Ulwar good lymph is from time to time obtained by vaccinating a young buffalo with humanized lymph. In other States lymph is mostly taken from vaccinated children, and there is rarely much objection made by the people to this method of carrying on protection.

TABLE 10.—*Verification of Returns of Vaccination.*

NAME OF DISTRICT OR STATE.	SUPERINTENDENT AND NATIVE SUPERINTENDENT.	Number of towns and villages visited.	SUCCESSFUL CASES SEEN. Three good marks.	Two good marks.	One good mark.	Total.	Unsuccessful cases seen.	Total number seen.	Percentage of success amongst cases seen.	Number of vaccinations and re-vaccinations in each State.	Percentage of cases seen to total number of vaccinations in each State.

* The Staff Surgeon at Nasirabad performed the duties of Superintendent.
† The Residency Surgeon, Western Rajputana States, also supervises the operations in the Jaisalmir and Sirohi States.
‡ The services of Hospital Assistants were utilized for a short time as Native Superintendents.

106. This table shows the inspection of vaccination by Residency and Agency Surgeons and by the Civil Surgeon, Ajmere, also by subordinates.

107. The Civil Surgeon, Ajmere, saw 248 children who had been successfully vaccinated. As there is now a Commissioned European Medical Officer in the Railway at Ajmere, and much other medical aid available, the Civil Surgeon should be allowed away from head quarters to inspect his out-dispensaries, and a good deal of the vaccination every cold weather, and till this is done, great progress in vaccination need not be expected.

108. The Residency Surgeon, Jodhpore, inspected 12,419 vaccinated children in Marwar, Sirohi, and Jaisalmir during the six months he was on duty, against 18,517 in the previous year; the Residency Surgeon, Jeypore, inspected 3,930 vaccinated children in that State, and none in Kishengarh, in ten months, against 4,552 in the previous year, and the Residency Surgeon, Oodeypore, 4,158

vaccinated children, against 2,741 in the previous year. The Agency Surgeon, Ulwar, inspected 5,963 vaccinated children, against 9,800 in the previous year; the Officiating Agency Surgeon, Kotah and Jhallawar, inspected 4,603 vaccinated children, against 6,188 in the previous year; the Agency Surgeon, Bikanir, inspected 2,731 vaccinated children, against 1,786 in the previous year, and the Officiating Residency Surgeon, Jeypore, inspected 233 children in one and-a-half months.

109. The Residency Surgeon, Jodhpur, found 98·14 per cent. of the vaccinations inspected successful; the Residency Surgeon, Jeypore, 98·33, and the Residency Surgeon, Oodeypur, 99·06. The Agency Surgeon, Kotah and Jhallawar, found 96·51 and 95·14 per cent., respectively, of the vaccinations inspected by him successful; the Agency Surgeon, Bikanir, 99·63, and the Agency Surgeon, Ulwar, 98·61.

110. The Medical Officer on special duty at Bhurtpore inspected 6,573 vaccinated children, and found 99·13 per cent. of these had been successfully operated upon.

111. In Jodhpore 75·90 per cent. of the total vaccinations performed were verified by the Residency Surgeon and other Inspectors; in Jeypore 32·74, in Oodeypore 40·08, in Bhurtpore 92·81, and in Bikanir 34·00.

112. It is intended to direct the attention of Residency and Agency Surgeons to the inspection of vaccination, as there has lately been a considerable falling off in this direction, and there is no duty of the Medical Officer in the Native States of Rajputana which can be less satisfactorily left to subordinates, nor is there anything which confers greater benefit on the people at large than the mitigation of small-pox epidemics which still from time to time unfortunately work great havoc among the juvenile population of this country, and which could be prevented by efficient vaccination.

113. The great advance which has during recent years been made in vaccination in the Jodhpore State, notwithstanding the many physical and other difficulties of the country, has been mainly due to the inspections of the Residency Surgeon. During the year under report and the previous year he inspected considerably more than three times as many children as the Residency Surgeon, Jeypore, and nearly twice as many as any other Residency or Agency Surgeon in Rajputana did in the same time. It will be seen from the following extracts from the Officiating Residency Surgeon of Jeypore's annual report on vaccination, just to hand, that vaccination in that State is much in need of greater attention. Dr. Pank writes:—"The decrease in the number of cases was in my opinion owing to two causes, one a time of scarcity and fewer children, and the other laziness on the part of some vaccinators, and a want of proper supervision by the Native Superintendent." "Complaints have been brought against vaccinators of taking bribes." "One vaccinator was found guilty and dismissed; other cases are under investigation." "Two vaccinators were dismissed for making false entries."

114. It is hoped the Officiating Residency Surgeon will devote more time to inspection than has hitherto been given to it, as this alone will remedy the unsatisfactory state of affairs mentioned by him.

115. There has been a great falling off in the inspections performed by the Agency Surgeons, Ulwar, Kotah and Jhallawar, and the vaccinations performed during the year, especially in Kotah and Jhallawar, have greatly diminished, so it is hoped the Officiating Agency Surgeon of these States will

endeavour to keep the work up to what it has hitherto been. There was no scarcity in either Kotah or Jhallawar to account for a reduction in the number of children vaccinated.

116. There has been a very satisfactory increase in the number of vaccinations inspected by both the Residency Surgeon, Oodeypore, and the Agency Surgeon, Bikanir.

117. The Administrative Medical Officer and Officiating Administrative Medical Officer inspected vaccinations at the head-quarters stations which they visited, and found the work done mostly very good.

SECTION II.—DISPENSARIES.

118. During the year the ordinary hospitals and dispensaries in Rajputana have increased from 148 to 149, and besides these there are 5 Mission and 6 Railway Hospitals open for the treatment of patients.

119. The Karauli female dispensary was closed in Fberuary, and still remains so on account of the difficulty of obtaining a female hospital assistant to take charge of it.

120. The Jodhpore Durbar opened the Jaswant hospital for women at Jodhpore, and an out dispensary at Bali during the year.

121. The Bhagwan Dass Hospital in Bikanir City has been completed and opened during the year. This hospital has been erected and furnished at the expense of the family of the late Rai Bahadur Seth Bhagwan Dass. This family has set a good example in Rajputana, and it is well worthy of emulation.

122. The new hospital at Dholpore has been completed and opened.

123. The Residency Hospital, Jodhpore, and an out dispensary in the Jeypore State have been rebuilt.

124. A new wing and an operation room are being added to the Hewson Hospital, Jodhpore. Buildings are being prepared for two new out dispensaries in the Jodhpore State, and these will shortly be opened.

125. The foundation stone of the Crosthwaite Hospital at Sirohi was laid in December, by the Agent to the Governor General, and the building is now under construction. The Sirohi Durbar is about to build a new dispensary at Sheogunge, and it is hoped both the above buildings will be completed by the end of the year.

126. A fine hospital is being built at Bhurtpore from a design by Colonel Jacob, and it is hoped this building will be opened for the reception of patients before the end of the year. It is proposed to improve and rebuild some of the out dispensaries in this State shortly.

127. A new dispensary is being built at Mandalgarh in the Oodeypore State; this building is now approaching completion, and the dispensary will shortly be transferred to it from the old house in which it has hitherto been located, and which is unsuitable for the purpose of a dispensary.

128. It is proposed to open some new out dispensaries in Kotah and Jhallawar, in districts where the people are too far from existing institutions.

129. The Agency Dispensary in Bikanir has been transferred to the list of Native States Institutions, as it is wholly supported by the Bikanir Durbar.

130. The Jaisalmir Hospital has been much enlarged and improved during the year.

131. Many of the hospitals and dispensaries in Rajputana have been rebuilt and improved during recent years, and progress in this direction is very satisfactory.

In appendix.

132. Table XI shows in a condensed form the medical relief given in Mission and Railway Hospitals and Dispensaries, as well as in all the other hospitals and dispensaries in Rajputana.

TABLE 12 —*Cases and Deaths.*

STATEMENT II.

		Cases treated.		Daily average.		Average duration.		Percentage of in-door to total cases.	Deaths.	
		In-door.	Out-door.	In-door.	Out-door.	In-door residence.	Out-door visits.		In-door.	Percentage to cases in-door.
Ajmere Division .	1895	831	54,401	31·34	340·74	13·76	2	1	111	13
	1896	965	56,604	32·06	355·93	12·13	2·30	1·67	111	11·50
Agency Hospitals and Salt Dispensaries	1895	607	25,301	26·16	312·71	15·73	4·51	2·34	11	1·82
	1896	781	22,715	34·05	270·98	15·91	4·35	3·32	15	1·92
Native States .	1895	14,012	889,075	605·00	7,770·87	15·76	2·39	1	370	2·63
	1896	13,890	889,308	646·84	7,731·74	16·99	3·17	1·54	492	3·54

133. The above table shows that 965 in-door and 56,604 out-door patients were treated in the dispensaries of Ajmere-Merwara, against 831 in-door and 54,401 out-door in the previous year.

134. The year was a healthy one, and the increase denotes a greater popularity of these dispensaries, so it is therefore very satisfactory.

135. In the Agency and Salt Dispensaries the in-door patients rose from 607 to 781, while the out-door fell from 25,301 to 22,715. These dispensaries were lately reduced from 12 to 11 by the transfer of the Bikanir Agency Dispensary to the list of Native States Institutions; this satisfactorily accounts for the reduced number of out-patients, as the patients treated in it were principally out-door, and there would have been a considerable increase instead of a decrease if this institution had remained under its old heading.

136. In the hospitals and dispensaries of Native States, 13,890 in-door and 889,308 out-door patients were treated, against 14,012 in-door and 889,075 out-door in the previous year.

137. The slight falling off in in-door patients may be accounted for by migrations from some districts on account of scarcity, and also by the year having been a healthy one.

138. The out-door increase was due to the increase of one in dispensaries, and to the institutions yearly becoming better known and appreciated by the public; it would have been greater if there had not been migrations from some of the desert districts.

139. There was an increased attendance at the hospitals and dispensaries of eight States, and a slight decrease at the hospitals and dispensaries of twelve States.

140. The percentage of deaths among in-door patients fell in Ajmere-Merwara, but it was a little higher in Salt, Agency, and Native States institutions, than in the previous year.

TABLE 13.—*Causes of Admissions and Deaths.*

STATEMENT III.

		PERCENTAGE TO TOTAL CASES AND DEATHS.

	1896	9	2	·41	·41	24	20	4	...	9	31

141. The above table shows the causes of admission and deaths in all hospitals and dispensaries.

142. Malarial fevers and spleen diseases, as usual, were the most common ailments met with at the hospitals and dispensaries. These affections gave rise to 19 per cent. of the total treated in the Ajmere division, against 20 per cent. in the previous year, and to 25 against 22 per cent. of the deaths; in Agency and Salt Dispensaries they gave rise to 24 against 22 per cent. of the total treated, and to 13 against 18 per cent. of the deaths; in Native States they gave rise to 15 per cent. of the total treated as in the previous year, and to 9 against 7 per cent. of the deaths.

143. In the Ajmere division 4 per cent. of the total treated were for diarrhœa and dysentery against 3 per cent. in the previous year, and the death-rate was also higher from these causes, *viz.*, 27 against 22 per cent.; in Agency and Salt Dispensaries 6 per cent. of the total treated were for diarrhœa and dysentery, against 5 in the previous year, and 7 per cent. of the deaths were from these affections, against nothing recorded in the year 1895.

144. In the Ajmere division lung and respiratory diseases gave rise to 6 per cent. of the admissions, as in the previous year, but the mortality from these affections fell from 29 to 10 per cent.; in Agency and Salt Dispensaries the admissions were 9 per cent. as in 1895, but the deaths rose to 47 from 46 per cent.; in Native States Institutions lung and respiratory diseases were accountable for 7 per cent. of the admissions against 8 in the previous year, and for 24 against 23 per cent. of the deaths.

145. Skin diseases were almost the same throughout, as in the previous year, and there was a slight increase in the numbers treated for eye affections, both in Salt, and Native States Dispensaries.

TABLE 14.—*Cases of Leprosy treated in the dispensaries of Rajputana.*

	FOR THE YEAR.											
	1891.		1892.		1893.		1894.		1895.		1896.	
	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.	Number of dispensaries.	Number of cases treated.
Ajmere-Merwara District .	7	79	7	87	7	77	7	21	7	26	7	44
Agency Hospitals and Salt Dispensaries	...	...	11	12	11	18	12	14	12	21	11	7
Native States . . .	114	726	117	659	120	812	125	754	129	788	131	791
TOTAL .	121	805	135	758	138	907	144	789	148	835	149	842

146. The above table shows that there has been but a very slight increase in the number of lepers treated, and that the increase in dispensaries and in the numbers of people who now resort to them for relief would be sufficient to account for it without any increase in the disease. Resorcin has been found, like some other remedies, to give temporary relief in this dire disease, but there is nothing special to report regarding its cure.

147. *Small-pox.*— Cases of small-pox were reported from Ajmere-Merwara and from 17 Native States. There were 3,821 deaths from this disease in the Ajmere division, and 4,021 in Native States. Ajmere City, Beawar town, and some other places where vaccination has lately made good progress, suffered much less than in former epidemics, and the mortality in these places during the recent outbreak was much less than in Goella and other towns which are less protected by vaccination.

148. *Snake poisoning.*—Strychnia has not been found so successful in the treatment of snake-bite in Rajputana, as Dr. Mueller's results would have led us to hope; the drug seems merely to act as a stimulant, as it does in other conditions of great depression, but it appears to have no specific antidotal properties so far as accurate observation in Rajputana has gone. The difference in the results obtained from this remedy in Australia and India might be accounted for by the greater virulence of many of the snakes of this country.

PLAGUE.

1836 and 1837, also 1896 and 1897.

149. Plague broke out in Marwar Pali about the midde of July 1836, and extended from there to Jodhpur City, Sojat, Kherwa, and many other towns of Marwar, also to Sakola and two or three other villages of Meywar.

150. Pali, where the disease broke out first with great virulence, is on the main road between Ahmedabad and Ajmere; the town is built on a stiff clay

soil, the drainage is bad, and at certain seasons when the tanks are full, it is water-logged. The tanks are filled from a river during the monsoon season which has a dam about three miles above the town to divert the water, and the site of the town is considerably lower than that of the dam. The principal streets of Pali are fairly wide, but the side streets are all narrow; the houses are substantially built, mostly of burnt bricks, and the principal inhabitants are well-to-do, as there has always been a prosperous trade carried on in cloth stamping and dyeing. At this period the population of Pali is supposed to have been about 25,000, although it is now under 18,000, and trade has considerably diminished in it during recent years.

151. Plague was supposed to have been brought to Pali from Southern Guzerat by a large party who had been with Zorawar Mull Seth on a pilgrimage to that part of the country, and who halted for some days in Pali on their return. The disease broke out in Pali shortly after the departure of this party from the town, but it has not been established that the party had the disease among them, nor even that plague was then present in any part of India. The disease first broke out among the cloth stampers, and it was supposed by some that it might have been introduced through imported cloths. Most of the materials imported to be stamped were from England, but silks were imported from China and abroad, and all importations were *viâ* Bombay. The disease rapidly spread from the cloth stampers to all other classes and castes, but Malis, Chamars and Telis are said to have suffered less than Mahajans and Brahmins, and the former lived more in the open.

152. The epidemic was at first fatal to nearly all attacked, and 50 or 60 a day died in this town; wood for burning corpses became so scarce and expensive on account of the enormous mortality, that cocoanuts and ghee were used for this purpose.

153. As soon as the disease became well established, the people got panic-stricken and fled from Pali to Sujat, Jodhpore, Kherwa, Chandrawal, and other towns, where they communicated it to the inhabitants. Many of the people left their property behind, they were so terrified; and when Assistant Surgeon Maclean of the Merwara Battalion, then stationed at Beawar, visited Pali, about the second week in October 1836, there were not more than 1,000 people in the town.

154. The disease continued to work great havoc among this reduced population, and only died out about the end of October, when the town was almost deserted.

155. Sujat was early attacked; it was then a town of 15,000 or 20,000 inhabitants, it is on the main road 20 miles from Pali, and many of the refugees from Pali settled in it. Dr. Maclean visited Sujat, and found that the Pali refugees had started the disease there, and that the deaths were from 20 to 40 a day.

156. In Jodhpore City the disease broke out with great virulence a short time after some Pali people had settled there; the population was then about 50,000. The people are said to have died at the rate of 60 to 90 a day, and about 600 or 700 had perished before the middle of October 1836. There was an abatement in the disease for a short time, although it does not appear to have ceased during the cold weather, and it only finally disappeared at the beginning of the hot weather of 1837. Lung complications were more general, and spitting of blood was a more common symptom of the disease in Jodhpore than

in Pali, while bubos were less common in the former than in the latter outbreak. The epidemic in Jodhpore was attributed by some to a strong south wind, and the recrudescence is said to have been brought about by a return of this wind.

157. The disease prevailed in many villages of Marwar from October 1836 till March 1837 ; it was introduced into Sakola in Meywar by an astrologer who went from Pali and put up in the house of a Brahmin of that town; the Brahmin, his wife, and others, died in the house after the death of the astrologer; the disease spread and nearly depopulated the town. Kankroli, another village of Meywar, suffered severely, but there is no record of plague having got into Oodeypore City, nor did it reach Ajmere, although the Pushkar Fair and Dargah were both held during the time it was prevalent in Marwar.

158. Dr. Maclean, who visited both Sujat and Pali during the epidemic, satisfied himself that the disease was plague; the attack generally came on suddenly with rigours, headache, pain in the back and loins, and sometimes nausea; the skin became hot and dry, the pulse quick and soft, frequently running up to 150; the tongue was coated often brown, vomiting uncommon but sometimes painful reaching; the abdomen was generally hard, and there was no diarrhœa ; the eyes became suffused, and the countenance heavy and anxious early in the disease; bubos formed in the groin, armpits or neck on the first or second day of the fever and pneumonia with distressing cough, rusty sputum and dyspnœa was a common complication. Coma generally set in before death, which often occurred on the third day of the disease. If the patient got over the third day, there was a chance of recovery, and large suppurating bubos were considered favourable. The bubos were most common in the groin, and they were more general in the Pali than in the Jodhpore outbreak, in which pneumonia was a very frequent complication.

159. Many precautions were taken against the spread of the disease towards Ajmere ; quarantine posts were established, and both people and goods were stopped on the border between Ajmere and Marwar. The Maharaja of Jodhpore was asked to prevent his people from attending the Pushkar Fair, he was also asked to keep healthy villages from communicating with infected, and many of the people protected their own villages by not-allowing refugees from plague-stricken places into them. It was remarkable that many of the small villages around Pali and other infected towns escaped, and this was believed to have been due to refugees not having gone into them, and to the small communities having agreed to keep away from plague-stricken towns. Money was received by many people from the infected, in cups of vinegar, to prevent contagion.

160. Quarantine posts were established on the Bombay side, and traffic was greatly interfered with on all sides of Marwar though not completely stopped. Fumigation was resorted to at some posts, but does not appear to have been effectually carried out. Goods traffic was even more dreaded as a means of disseminating the disease than people, so articles were frequently burnt, and the ashes both of these and of corpses were ordered to be deeply buried, as the virus was believed to remain potent even after burning, and to be spread by the ashes being blown about.

161. Dogs and cats were supposed to carry the poison from house to house, and also rats, which died in numbers during the epidemic.

162. There was little done in the way of treatment; once lung complications appeared, the case was considered hopeless, and both vaids and hakims fled from the infected places, and declared they knew nothing of the new and terrible disease, nor of its treatment.

163. Infusions of *nim* leaves, infusion of onions, and the urine of the ass were given internally; poultices of *nim* leaves, onions, and red pepper were applied to bubos; bleeding from the arm and leeches to the bubos were resorted to, but without effect. Escarotics were applied to the bubos with no better results than the other remedies. The body was rubbed with oil or ghee both as a curative remedy and as a prevention against infection. The wearing of oilskin while in contact with people suffering from the disease was believed to be a useful precaution. Dr. Maclean was of opinion that there was no danger of infection in the open air, and that the people contracted the disease in the badly-ventilated houses which had become saturated with the poison. European methods of treatment were unknown in Marwar at this time.

164. The Pali plague, *gaut kee mandagee*, or *granthi javor*, which destroyed the rats in great numbers, and carried off thousands of people, is still remembered by some old people in Marwar, and it was undoubtedly the same disease which recently prevailed in Bombay and other adjacent parts of the country.

165. During the months of October, November, December and January last, thousands of people fled from Bombay and other places in that direction to Marwar, Bikanir, Serohi, Jaisalmer and Ajmere, in order to escape from plague. Sixteen deaths from plague and suspected plague were reported, *viz.*, 4 at Abu Road, 2 at Jawalia, 3 at Marwar junction, 1 at Beawar, 2 at Ajmere, 1 at Phalera, 2 at Jeypore and 1 at Nadbai near Bhurtpore. An undoubted case of plague recovered in the segregation camp at Bandikui; the subject was a sepoy of the 13th Bombay Infantry, who was taken from the train *en route* from Deesa to Bhurtpore on leave; the disease was then prevalent in Palanpore and in some other villages near Deesa. Four recoveries from undoubted plague occurred in the camps at Abu Road and Marwar junction, and many suspected cases taken from trains recovered in the different plague camps on the line of Railway throughout Rajputana.

166. Segregation camps have been established at all the important stations along the lines of Railway which run through Rajputana, and great vigilance has been exercised, both by the Medical Officers on special plague duty at Ajmere and Bandikui, and by the medical subordinates in charge of the other camps, to keep people suffering from plague from travelling, and this has undoubtedly done much to prevent the spread of the disease. The Marwar and some other Durbars issued orders to their officials to keep refugees from infected areas in quarantine outside the towns for ten days after their arrival, and although this was not invariably carried out, it roused the people to a sense of danger, and to assist in the protection of their own homes, the general effect of which was good. The season was greatly against the spread of plague in Rajputana; the monsoon rains were over early, the winter rains were unusually light, and the country was in consequence exceedingly dry; the hot weather also began earlier and the heat was more intense than usual, so all these conditions were unfavourable for the multiplication of the plague germ, and the spread of plague among the people.

167. Whenever a suspicious death occurred among the Bombay refugees in Marwar, the house in which it took place was evacuated, disinfected, or burnt down, and the occupants were put into quarantine outside the town for a period of ten days; reports on the health of the townspeople were made during this time, so that any outbreak could have been dealt with early.

168. During the epidemic in Palanpore, on the Rajputana border, many people fled to Abu Road, Marwar Junction, Ajmere and Jeypore: they were kept in the quarantine camps at these places for a time, and then sent back to their district without being allowed into the towns.

169. The Sirohi villagers were warned against communicating with Palanpore and the infected villages in that district, and a guard was placed on the main road leading from Palanpore into the Sirohi State to prevent intercourse.

170. The pilgrim traffic between Mount Abu and Abu Road was completely stopped, and quarantine of ten days was imposed on people coming to Abu from infected districts: this measure effectually prevented the overcrowding which always takes place in the Abu bazaar during the hot weather, and no doubt saved the place from an invasion when plague was epidemic in Palanpore, two stations from Abu Road on the main line.

171. The Table showing the influence of seasons on the mortality of in-patients has been omitted, as no returns are now received in this office, from which it could be prepared.

TABLE 15.—*Sex, Age and Caste.*

STATEMENT IV.

		PERCENTAGE OF THE TOTAL TREATED.				
		Men.	Women.	Children.	Hindus.	Musalmans.
Ajmere Division	1895	52	19	29	72	24
	1896	54	17	29	70	26
Agency Hospitals and Salt Despensaries.	1895	63	16	21	46	34
	1896	65	14	21	43	36
Native States	1895	53	20	27	67	27
	1896	53	20	27	67	27

172. The above table shows the sex, age and caste of the attendance at the hospitals and dispensaries throughout the country.

173. This table varies very little from year to year; however, as women's hospitals become established in the large centres, there will be a falling off in the attendance of females at the ordinary hospitals and dispensaries, as they can be better examined and many of their ailments better attended to by their own sex in institutions where they do not mix with men.

174. The population is largely Hindu, so the attendance at the ordinary hospitals and dispensaries shows a large predominance of this caste. Most of the peons employed in the Salt Revenue Department are Musalmans, and this accounts for the high percentage of attendance of that caste under Agency and Salt Dispensaries.

TOTAL	272*	3	3,242†	9	2,583*	26	59,133 ‡	43

* Purely major surgical operations.
† Both major and minor operations according to the revised nomenclature of diseases.
‡ Includes 1,033 operations performed in the Agency Hospitals and Salt Dispensaries.

175. The above table shows the operations performed both in Ajmere-Merwara and in Native States during 1896, according to the new nomenclature of diseases, and also the major operations performed in 1895, according to the old nomenclature.

176. In Ajmere-Merwara 3,242 operations were performed, and in Native States 59,133: there were 9 deaths among the former, and 43 among the latter.

177. In the Ajmere City Hospital 1,544 operations were performed, in Beawar 845, and in out dispensaries 270. In Ajmere 127 extractions of the lens for cataract were performed, 2 successful lithotomies, and 2 litholapaxies, with one death. In Beawar 3 cataract extractions were performed, 12 successful lithotomies and six successful litholapaxies.

178. In Native States, as hitherto, Jeypore stands well ahead of all others in surgery. In Jeypore, Kishengarh and Sambhar, 14,027 operations were performed with 18 deaths; of these 716 were extraction of lens for cataract, 32 litholapaxies with 1 death, and 8 lithotomies with 2 deaths. Most of the important operations were performed in the Mayo Hospital at Jeypore, and a successful ovariotomy was done there.

179. In Jodhpore, Jaisalmer and Sirohi, 8,080 operations were performed with 8 deaths; of these 146 were extraction of the lens for cataract, 14 litholapaxies with 1 death, and 17 lithotomies with 1 death. Most of the cataracts and litholapaxies were performed in the Hewson Hospital in Jodhpore City.

180. In Oodeypore, Pertabgarh, Banswara, Dungarpore and Kushalgarh, 7,621 operations were performed; of these 15 were extraction of the lens for cataract. Most of the important surgery was done in the Lansdowne Hospital in Oodeypore City, and at Bhilwara dispensary in Meywar.

181. There are Mission Hospitals in both Jodhpore and Oodeypore with keen Surgeons in charge, and they naturally attract their share of the operations, so the Residency Surgeons at these places cannot expect to make such a show in surgery as the Residency Surgeon of Jeypore, who has no opposition, and one of the finest hospitals in India. Moreover the Mayo Hospital has been established nearly 30 years, while the hospitals at Jodhpore and Oodeypore are only of a few years' standing, and Jeypore has a great advantage in population, both of the city and surrounding country, over the desert of Marwar, and the sparsely-populated hills of Meywar; nevertheless, steady and good progress has been made in surgery as well as in the other departments under the Residency Surgeons of Jodhpore and Oodeypore.

182. In Bhurtpore 5,874 operations were performed with 2 deaths; only one cataract operation was performed; 3 lithotomies were performed, one of which was fatal, and two successful litholapaxies. The principal hospital at this capital is too far away from the people, and it is hoped that there will be a great increase in surgical operations as soon as the new hospital now under construction in the city is opened.

183. In Bikanir 5,514 operations were performed with 3 deaths; 18 of these were extraction of the lens for cataract, and 5 successful lithotomies. The new Bhagwan Dass Hospital, which has lately been opened in Bikanir City, has given greatly improved accommodation for surgical cases.

184. In Kotah and Jhallawar, 5,503 operations were performed with 3 deaths; 119 of these were extractions of the lens for cataract, there were 3 lithotomies and one litholapaxy.

185. In Ulwar 5,044 operations were performed, with only one death; 29 were extractions of the lens for cataract, and 12 were successful lithotomies. Improved accommodation is required in Ulwar City Hospital.

186. In Karauli 2,758 operations were performed without a death, 66 of which were extractions of the lens for cataract, and 2 lithotomies.

187. In Tonk 1,898 operations were performed with one death, which occurred among 7 lithotomies.

188. In Dholpore 1,221 operations were performed without a death.

189. In Shahpura 950 operations were performed; in Deoli 417 with 2 deaths, one of which followed lithotomy; in Kherwara 12 operations were performed with 3 deaths, and in Bundi 4 operations one of which proved fatal.

190. There were 138 amputations performed in Ajmere-Merwara and Native States with 6 deaths, and 13 of these were amputations of the thigh, only one of which proved fatal; there were 81 lithotomies and 57 litholapaxies performed with 7 deaths in the former and 3 in the latter.

191. The progress made in surgery during the year under report both in Ajmere-Merwara and in Native States has been very satisfactory, and this is particularly noticeable in cataract operations; but there has been a considerable advance in litholapaxy also, principally in Jeypore, Jodhpore and Beawar.

TABLE 17.—*Surgical Operations for Mycetoma.*

NAME OF OPERATION.		Number.
Amputations	Forearm	1
	Wrist	1
	Thigh	4
	Leg	26
	Foot	7
Excision of soft parts		76
	TOTAL	115

192. There were 115 amputations and excisions for Mycetoma against 97 in 1895: 67 in Marwar, 34 in Bikanir, 4 in Jeypore, 3 in Beawar and Jaisalmer, respectively, and 1 in Ulwar, Meywar, Sirohi and Abu Road, respectively.

TABLE 18.—*Major operations performed by Medical Officers, Assistant Surgeons and Hospital Assistants in Rajputana during the year 1896, drawn up in accordance with the Government of India, Home Department, Letter No.* $\frac{13 \text{ Medl.}}{615}$, *dated 30th September 1893.*

NOTE.—Names of Hospital Assistants who have performed less than 20 operations have not been shewn above except those at Jaisalmir and Kishengarh.

193. The above table shows the operations performed by each Medical Officer, Assistant Surgeon and Hospital Assistant.

Extractions of the lens for cataract were successfully performed by 1 Lady Doctor, 3 Female Hospital Assistants, 13 Medical Officers and Officiating Medical Officers, 4 Assistant Surgeons and 10 Hospital Assistants, but by far the largest number of these operations was done in the Mayo Hospital, Jeypore.

TABLE 19.—*Expenditure.*
STATEMENT V, PART I.

		1895.	1896.	Percentage on the total cost of 1896.
		₹	₹	₹
AJMERE DIVISION	ON ESTABLISHMENT—			
	Paid by Government—			
	1. Medical Officers	3,277	3,217	28·11
	2. Compounders, Dressers, etc.	288	293	2·56

	Cost per diet per diem	20	22	

* Includes Rs. 563-8-10 paid towards the liquidation of debit balance against Kekri and Pisangan Dispensaries, *vide* remarks on Statement V, Part I.

194. In the Ajmere division, the expenditure on hospitals and dispensaries fell from R12,267 to R11,445. The expenditure on buildings and repairs fell from R1,528 to R484, as no new buildings were constructed during the year in this division.

195. There was an increase in the expenditure on bazaar medicines and a decrease in the expenditure on Europe medicines, *viz.*, R456 against R377 in the former, and R1,983 against R2,070 in the latter. The cost of diets rose considerably, *viz.*, from R691 to R922 on account of the high prices of food stuffs which ranged throughout the year, and the greater number who required diets in hospital on account of prevailing scarcity.

196. The percentage of the total cost paid by Government rose from 42 to 51; the total cost of establishment and Europe medicines was, as usual, defrayed by Government, while there was less expenditure on buildings than in the previous year, consequently the dispensary fund was less drawn upon, and this raised the ratio of the Government contribution.

197. Each case treated cost 38, against 43 pies in the previous year, and this was due to the decrease in expenditure on buildings and repairs.

198. The expenditure statement of the General Hospital, Ajmere, showed a decrease of R636-7-9 at the end of the year, but the floating cash balance also decreased from R802-1-9 to R562-15-11. The subscriptions from Europeans and natives rose respectively from R55 to R155, and from R888 to R1,202. The invested capital remained as before, *viz.*, R8,500.

199. The financial position of the Kekri, Pisangan, Deolia and Ramsar Dispensaries, has improved; there is now only a debit balance of R130-11-8 against the Kekri Dispensary, and all the others have a balance to credit.

200. The Beawar and Todgarh Dispensaries have both improved financially during the year, the cash balance of the former at the end of the year was R1,380-2-1 against R1,344-1-1 at the end of 1895, and the debt on the latter has been reduced during the year under report from R613-2-3 to R364-13-0.

201. The expenditure on Abu and Abu-Road Dispensaries fell from R1,882 to R1,699, and the subscriptions collected at Abu rose from R803 to R1,111.

202. The expenditure on Political Agency and Salt Revenue Dispensaries fell from R12,094 to R11,158: this was mainly due to the transfer of the Bikanir Agency Hospital to the list of Native States institutions against which its cost is now charged.

203. The expenditure on hospitals and dispensaries in the Native States of Rajputana rose from R2,73,100 to R2,99,326, and the increase was mainly due to the building of the Bhagwan Dass Hospital in Bikanir City, which was completed and charged in the accounts during the year under report.

204. The expenditure on Europe medicines rose from R48,529 to R50,898 and the expenditure on diets from R17,005 to R20,975. Each case treated cost R0-5-4 and each diet R0-1-10.

205. Of the total sum expended on these institutions R82,625 were expended in Bikanir, R59,878 in Jeypore, R28,472 in Jodhpore, R26,320 in Oodeypore, R18,952 in Kotah, R17,194 in Ulwar, R16,857 in Bhurtpore, R14,154 in Jhallawar, R8,327 in Tonk, R5,169 in Dholepore, R4,394 in Karauli, R2,181 in Sirohi, R2,067 in Jaisalmir, R1,767 in Bundi, R1,472 in Shahpura, R1,470 in Kishengarh, R1,408 in Dungarpore, R1,401 in Banswara, R1,165 in Pertabgarh, and R452 in Kushalgarh.

Mission Hospitals.

206. Much good work has been done during the year in these hospitals which are located at Ajmere, Jodhpore, Oodeypore, and Nasirabad. In the

Ajmere Hospital, 63,576 out and 119 in-patients were treated, and 1,081 operations performed. This does not include the work done in the Women's Mission Hospital at Ajmere, which is given in another page. In Jodhpore 42,594 out and 115 in-patients were treated, and 1,259 operations performed. This includes the work done in Jodhpore City, and also the district work. In Oodeypore 56,244 out and 464 in-patients were treated, and 1,186 operations performed. In Nasirabad 35,923 out and 200 in-patients were treated, and 1,079 operations performed.

Railway Hospitals.

207. In the Railway Hospitals at Ajmere, Bandikui, Phalera, Sujat Road and Abu Road, 23,092 patients were treated during the year under report, *viz.*, 9,579 at Ajmere, 4,080 at Bandikui, 2,208 at Phalera, 4,932 at Sujat Road, and 2,293 at Abu Road.

Sale of Quinine.

208. Quinine was offered for sale at 132, against 118 post-offices in the previous year. In these post-offices 359 parcels, equal to 36,618 doses of quinine, of five grains each, were sold, against 341 parcels, equal to 34,782 doses, in the previous year.

209. There was an increase in the sales effected in Meywar, Haraoti and Tonk, and in Bhurtpore, where new post-offices were opened, and the sale carried on in 11, against 3 post-offices.

210. There was a falling off in the sales effected in Marwar, Sirohi, Jeypore and Kishengarh, Bikanir, Kotah and Jhallawar, and in Ajmere-Merwara, and only a few powders have been disposed of in Ulwar in two years.

211. There was no unusual prevalence of malarial fevers in Rajputana during the year under report, and nothing special to stimulate the sale of the drug; the increase of 1,836 doses is therefore sufficient to justify the continuance of the scheme for a further period, and arrangements have been made with the Government of Bengal for the necessary supply for all post-offices in Rajputana for the current year.

212. In Meywar considerable sales have been effected in out districts, but in Marwar and other States the largest quantities have been disposed of on or near the Railway, and this would indicate an appreciation of the drug by the Babu which might in time extend to the villager, as the potency of the remedy against fever becomes better known to him.

213. There is neither great expense nor trouble in connection with the sale of quinine at post-offices, now that the scheme has been started, and this would further recommend its continuance.

SECTION III.—JAILS.

Table 20.—*Cases and Deaths.*

		Number of Jails.	Average number of prisoners of all classes.	Cases in hospital.	Average daily sick.	Deaths.	Average duration of cases in days.	Percentage of deaths to cases.	Death-rate per thousand prisoners per annum.				
									Total.	*Quarters of the year.*			
										First.	Second.	Third.	Fourth.
Ajmere Division	1895	1	330·78	285	15·49	15	17	5·26	45·35	72·56	108·84	...	...
	1896	1	301·77	69*	4 25	4	22	5·80	13·26	26·52	...	...	26·52
Native States .	1895	19	4,556·76	3,542	126 12	128	10	3·61	28·09	20·24	23·76	30·80	37·84
	1896	20	4,792·23	5,750*	225·55	135	14	2·35	28·17	31·72	14·20	33·88	35·88

* The number of sick remaining on 31st December 1895 has been included.

214. The above table shows that the average daily number of prisoners in the Ajmere Jail was considerably less than in the previous year, *viz.*, 301·77 against 330·78 in 1895.

215. Returns have been received from 20 jails in Native States, one more than in the previous year, *viz.*, Doongarpore, and there is now only the small jail at Kushalgarh from which regular reports are not received. The average daily number of prisoners in these jails rose from 4,556·76 to 4,792·23, but the increase was to some extent due to the extra jail which had a daily average of 88·76 prisoners.

216. The admissions into hospital fell from 285 to 69 in the Ajmere Jail and rose in Native States' Jails from 3,542 to 5,750.

217. The daily average sick in Ajmere fell from 15·49 to 4·25 and rose in Native States' Jails from 126·12 to 225·55.

218. There were four deaths against 15 in the previous year in the Ajmere Jail, and 135 against 128 in Native States' Jails. The death-rate in the Ajmere Jail was 13·26, against 45·35 *per mille* in the previous year, and 28·17 *per mille* in Native States against 28·09 in 1895.

219. The deaths occurred in the Ajmere Jail in the first and fourth quarters ; in Native States' Jails the fatalities were fewest in the second and most in the fourth quarter of the year.

TABLE 21.

YEAR.	PRICE OF WHEAT PER RUPEE.		AJMERE DIVISION.		NATIVE STATES.	
	Seers.	Chittacks.	Average number of prisoners.	Death-rate per thousand.	Average number of prisoners.	Death-rate per thousand.
1892 . .	12	10	434·55	27·61	4533·28	41·70
1893 . .	12	13	337·10	11·87	4558·67	32·03
1894 . .	14	1	333·10	18·01	4383·42	28·29
1895 . .	13	6½	330·78	45·35	4556·76	28·09
1896 . .	9	8	301·77	13·26	4792·23	28·17

220. The above table shows that the mortality in the Ajmere Jail was very low during the year under report.

221. The mortality in the jails of Native States was much the same as in the previous year, *viz.*, 28·17 against 28·09. Several of the jails had a very ked reduction in mortality, but in a few the death-rate was abnormally nd this affected the general average materially.

TABLE 22.—*Causes of Admissions and Deaths.*

STATEMENT III.

		PERCENTAGE TO THE TOTAL CASES AND DEATHS.									
		Malarial fevers and spleen.	Cholera.	Rheumatism.	Diseases of the eye.	Lung and respiratory diseases.	Dysentery and diarrhœa.	Ulcers.	Skin diseases.	Injuries.	All others.

	1896	21	·49	4	2	10	14	7	5	·2	34
					Deaths.						
Ajmere Division	1895	53	...	...	...	47	...	...	..	...	...
	1896	...	...	...	...	25	...	...	...	...	75
Native States	1895	10	...	2	...	33	29	...	...	1	25
	1896	9	8	1	...	26	33	1	1	...	21

222. The above table shows the percentage of admissions and deaths from different diseases in all jails in Rajputana.

223. In the Ajmere Jail the admissions for malarial fevers and spleen diseases fell from 74 to 19 per cent., and there were no deaths from these causes against 53 per cent. in the previous year. In Native States Jails the admissions from the above causes fell from 33 to 21 per cent. and the deaths from 10 to 9 per cent.

224. In Ajmere lung and respiratory diseases rose from 7 to 12 per cent., but the deaths from these affections fell from 47 to 25 per cent. In Native States the admissions from the above causes fell from 12 to 10 per cent., and the deaths from 33 to 26 per cent.

225. In the Ajmere Jail there were 9 per cent. of admissions for dysentery and diarrhœa, against 1 in the previous year; but there were no deaths from these causes. In Native States Jails there were 14 per cent. of admissions from dysentery and diarrhœa, against 13 in 1895, and the deaths from these affections were 33, against 29 per cent.

226. There was a considerable prevalence of skin diseases in the Ajmere Jail, and 7 per cent. of ulcers in Native States Jails.

227. Eye affections were as in the previous year, *viz.*, 1 per cent. in Ajmere and 2 per cent. in Native States.

228. There was no cholera in the Ajmere Jail, but there were 9 deaths in Native States Jails, *viz.*, 6 in Bhurtpore, 2 in Oodeypore and 1 in Jhalrapatan.

229. *Ajmere.*—The Ajmere Jail has been very healthy throughout the year under report, and it is in excellent condition.

230. *Tonk.*—No death occurred iu this jail, but the admissions into hospital rose from 660·09 to 739·24 *per mille.*

231. *Kishengarh.*—No death was reported from this jail, though known to be about the worst in Rajputana. I selected a site for a new

Kishengarh in 1894, but nothing was then done. A plan for a new jail has just been sent to me for approval, and it is hoped that the building will be carried out early, as a jail is much needed. The admissions into hospital in the Kishengarh Jail rose from 1867·09 in 1895 to 3688·46 in the year under report.

232. *Jeypore.*—The mortality in the two jails at Jeypore fell from 24·62 to 8·75 and from 18·45 to 7·51; the admissions into hospital were 210·04 and 459·42 against 374·30 and 579·38 *per mille* in the previous year. The excellent health of the prisoners in these jails is said to be greatly due to increased diet.

233. *Ulwar.*—The Ulwar Jail is in very good order but the death rate rose slightly, *viz.*, from 7·16 to 8·29 *per mille*; there was also a rise in the admissions from 598·57 to 675·65 *per mille.*

234. *Bikanir.*—This jail is in very good condition, and there was a slight fall in mortality, *viz.*, from 10·42 to 10·09 *per mille*; the admissions also fell from 125·00 to 90·85 per thousand.

235. *Doongarpore.*—This jail has had a fairly low mortality and a high admission rate, *viz.*, 22·53 and 1182·97 *per mille*; it is not constructed on a good plan, nor is it well managed; returns have been received for the first time.

236. *Karauli.*—This jail is generally overcrowded; the death-rate rose from nothing in the previous year to 25·52, and the admissions fell from 1079·98 to 791·22 *per mille.*

237. *Jodhpore.*—This jail has been slightly overcrowded on a few occasions during the year, but the death-rate has fallen from 44·22 to 26·11 *per mille*; although the admissions have risen somewhat, *viz.*, from 329·20 to 484·70 *per mille.* The scale of diet has been increased on the recommendation of Dr. Cleghorn, C. S. I., Director General, Indian Medical Service, at his visit to Jodhpore in December last, and it is hoped this will have a beneficial effect on the health of the prisoners. The jail is in very good order, but fresh vegetables are difficult to obtain, and at certain seasons sufficient good water for the prisoners.

238. *Bundi.*—The death-rate in this jail fell from 40·00 to 39·21, but the admissions rose enormously, *viz* from 74·00 to 921· 57 *per mille.* These figures are probably incorrect, as I found when I inspected the jail that the books had been badly kept. The dormitories of this jail require ventilators badly.

239. *Oodeypore.*—The mortality in this jail rose from 28 74 in 1895 to 39·83 in the year under report, and the admissions from 1116·37 to 1269·80 *per mille.* There has been great overcrowding throughout the year, and to this the bad state of health of the prisoners has been due, as the jail is otherwise in very good order. There were 7 cases and 2 deaths from cholera in this jail.

240. *Kotah.*—The death-rate rose in this jail from 31·15 to 45·58, principally on account of fever and dysentery in the unhealthy season after the rains, but the admissions fell slightly, *viz* from 1531·09 to 1508·35 *per mille.* There has been no overcrowding, the jail is a good one and in good order, but the climate of Kotah is sometimes very unhealthy.

241. *Dholpore.*—The mortality in this jail rose from 18·50 to 51·30, and the admissions from 1392·24 to 1436·47 *per mille.* Although the jail is now much better kept than formerly, it remains unhealthy as the site and building are both bad.

242. *Jalrapatan.*—The mortality in this jail fell from 55·08 to 51·68, but the admissions rose from 890·48 to 924·65 *per mille.* This jail is on a bad site and greatly overcrowded, consequer tly the mortality is always great. There were 2 cases and 1 death from cholera in this jail.

243. *Bhurtpore.*—Although the mortality has risen in this jail from 17·38 to 56·00, and the admissions from 202·85 to 435·55 *per mille*, the jail has been quite reformed by Doctor Drake-Brockman; it was in very bad condition till lately, and it is now one of the best managed jails in Rajputana; so it is hoped that this will shortly affect the health of the prisoners for good. There were 15 cases and 6 deaths from cholera in this jail.

244. *Pertabgarh.*—This jail has been somewhat improved during recent years, but it is still very unhealthy; the mortality has, however, fallen from 80·14 to 59·93, although the admissions have risen from 2417·5 to 3460·67 *per mille.* This jail is mostly very much overcrowded; it is badly drained and unsuited for a prison.

245. *Sirohi.*—This is a good jail and in good order, still the mortality in it has been very high, and an increase of diet has been recommended. The mortality fell slightly, *viz.*, from 64·22 to 59·96, and the admissions from 1244·28 to 944·32 *per mille.*

246. *Jaisalmir.*—This jail has been much improved during recent years, and there were no deaths in it for three years before that under report, during which three prisoners died. The mortality rose from nothing to 65·06, but the admissions fell from 5919·85 to 4445·89 *per mille.* An improved diet has been recommended by me for the prisoners, but there has been an almost complete failure of crops in the country for two years in succession, and the Dewan has pointed out that many of the nobility of the country are not so well fed as the prisoners now are, and this high living in jail may become an incentive to commit crime.

247. *Shahpura.*—This jail has been very unhealthy throughout the year, and it is generally much overcrowded. The mortality has gone up from 47·25 to 67·23, and the admissions have risen from 2244·80 to 2386·55 *per mille.*

248. *Banswara.*—This jail is always very unhealthy, badly managed, and overcrowded; its site is bad, and also its construction, as I pointed out when it was being added to some years ago. The death-rate rose from 62·07 in 1895, to the enormous mortality of 131·60 in the year under report; but the admissions fell from 3145·04 to 2747·16 *per mille.*

249. The scale of diet has been increased in several jails; greater attention is now being paid by Durbars to ventilation, and overcrowding, which has hitherto been so detrimental to the health of the prisoners, especially in some of the old jails has become less common. The water-supply of many jails has been improved, and jail gardens have become more general, and are better kept up. Great progress has, during recent years, been made in jail management in the Native States of Rajputana, and many of the jails are now in good order; there are however a few which are still backward and which require more attention.

250. Brigade-Surgeon–Lieutenant–Colonel Hendley inspected the jails at Ajmere, Oodeypore, Jodhpore, Karauli, Bikanir, Ulwar, Tonk and Jeypore, and Doctor Adams inspected the jails at Dholpore, Bhurtpore, Kotah, Jhallawar, Bundi, Sirohi, and Jaisalmir.

251. The jails at Banswara, Pertabgarh and Doongarpore should have been inspected by the Residency Surgeon, Oodeypore, and it is hoped the Officiating Residency Surgeon will take an early opportunity of carrying out these inspections, as progress need not be expected unless these backward jails are regularly inspected.

INSPECTIONS.

252. Brigade-Surgeon-Lieutenant-Colonel T. H. Hendley, C.I.E, held the Office of Administrative Medical Officer in Rajputana till the 12th February 1897, in addition to his ordinary duties as Residency Surgeon, Jeypore. Surgeon-Major H. N. V. Harington held charge at Jeypore from the above date to the 4th March, when the office was transferred to Jodhpore, and made over to Surgeon-Lieutenant-Colonel A. Adams, M,.D., in addition to his other duties as Residency Surgeon, Western Rajputana States.

253. Brigade-Surgeon-Lieutenant-Colonel Hendley inspected at Ajmere, Oodeypore, Kherwara, Jodhpore, Bikanir, Ulwar, Tonk and Karauli, and Dr. Adams at Dholpore, Bhurtpore, Deoli, Kotah and Jhallawar.

254. The hospitals, barracks, stations, and ,recruits of the Local corps, and also of the Imperial Service Troofs of Rajputana were inspected.

255. Residency and Agency Surgeons are expected to inspect all Dispensaries in their charges at least once a year. The Residency Surgeon, Western Rajputana States, inspected all the Dispensaries in Marwar since his return from leave on the 2nd November last, except the Northern India Salt Revenue Department Dispensary at Pachbadra, which had already been seen by Dr. Weir during the time he officiated at Jodhpore; he also inspected the Jaisalmir and Sirohi Dispensaries during the cold weather. It is hoped that the Officiating Residency Surgeons at Oodeypore and Jeypore will give more time to inspection duties, as this is much required, and out-dispensary hospital assistants often lapse into carelessness and idleness if left to themselves for long periods.

256. The Agency Surgeons, Bikanir, Ulwar, Kotah and Jhallawar, carried out the inspections of the Dispensaries under them, and the Medical Officer on Special Duty at Bhurtpore inspected the Dispensaries of that State during the cold weather.

257. Dr. Adams inspected the plague segregation camps at Mount Abu, Abu Road, Pindwara, Nana, Marwar Junction, Jodhpur, Beawar, Ajmere, Phalera, Jeypore, Bandikui, Nadbai, Bhurtpore, Dholpore and Ulwar. He also inspected the coolies on the famine relief works at Dholpore, Bhurtpore, Nagore, Merta, Philodi, Didwana, Sambhar, Jaisalmir, and on the earthworks of the Pachbadra-Oomerkote Railway, and found them in good health and in good condition.

258. Drs. Douglas ffrench Mullen and A. Adams spent much of their furlough last year in studying Bacteriology, and Indian Medical Officers who wish to keep pace with advancing medical science should be encouraged. The pathological laboratory at Netley is now second to none in Europe, and Professor Wright is always glad to admit Indian Medical Officers to the course, and to help them in every possible way with their studies.

259. There are now 11 Officers of the Indian Medical Service employed in Rajputana, besides the three medical officers in military employment at Deoli, Erinpura and Kherwara, *viz.*, 2 Civil Surgeons at Ajmere and Bikanir, 3 Residency Surgeons at Jodhpore, Oodeypore and Jeypore, 2 Agency Surgeons at Kotah and Ulwar, 2 medical officers on special plague inspection duty at Ajmere and Bandikui, one medical officer on special duty with his Highness the Maharaja of Bhurtpore, and one medical officer on famine duty in the Eastern States.

260. There are 9 Assistant Surgeons, *viz.*, 1 at Beawar, 3 employed by the Marwar Durbar, 3 by the Jeypore Durbar, 1 by the Bhurtpore Durbar, and one at Jhalrapatan.

261. There are 23 Hospital Assistants employed by the British Government, *viz.*, 7 in Ajmere-Merwara, 13 in Agency and Salt Dispensaries, and 3 on the reserve list.

262. There are 145 qualified Hospital Assistants lent by Government and employed by Durbars, and there are still some unqualified practitioners employed in Jeypore, Dholpore, Pokurn, Bhurtpore, Bikanir and Oodeypore, whom it is proposed to replace by Government Hospital Assistants as early as opportunity offers, as has already been done in Sirohi and all the Marwar Dispensaries except that of the Pokurn Thakur.

263. There are at present unusually few applications from qualified Hospital Assistants for employment in Rajputana, but it is hoped that more candidates will be forthcoming as soon as they have been relieved from plague duty, on which many have been employed lately.

264. I regret that this report is somewhat late, but the inspection duties and correspondence in connection with plague have lately added much to the Administrative Medical Officer's work; then this office is still in the same undermanned condition, to which attention has so frequently been drawn by my predecessors and myself, that the work has only been got through by keeping the clerks at it long after hours, and by doing work myself which properly belongs to them. It is hoped the recommendations made with regard to the strengthening of my office will shortly be accepted, as the unsatisfactory condition in which it has so long remained is detrimental to my appointment as Residency Surgeon, Western Rajputana States, as well as to my additional charge of Administrative Medical Officer in Rajputana.

Female Hospitals and Education of Women.

265. *Ajmere.*—Miss Campbell continues to superintend the Mission Hospital for Women at Ajmere, and Miss Young still works under her. Much excellent work has been done during the year by these ladies, both in the hospital and in the people's houses. In the hospital 7,422 out and 48 in-patients were treated, and 205 operations performed, besides 2,038 visits were paid to women in their own houses.

266. *Beawar.*—The female dispensary at Beawar has been closed about five months of the year, on account of no female Hospital Assistant being available to work in it. It was re-opened on the 8th of November last, by Female Hospital Assistant Champa Bai, who is now in charge. During the time the dispensary has been opened 3,175 out and 9 in-patients have been treated, and 35 ladies have been seen at their own houses free of charge. Bibi Asharfi, who formerly held charge of this dispensary, is now employed by the Bikanir Durbar.

267. *Oodeypore.*—Miss Perry has been in charge of the Walter Hospital for Women at Oodeypore throughout the year, and she has done good work under considerable difficulties, as she has had no Female Hospital Assistant to help her for many months. In this hospital 3,506 patients were treated and 63 operations performed. Miss Perry also visited some of the Oodeypur ladies at their own homes, and treated them there.

268. *Ulwar.*—Miss Dissent, M.D., has held charge of the Lady Dufferin Hospital at Ulwar throughout the year, and two Female Hospital Assistants have done excellent work under her. Excellent work has been done in this hospital and among *purda nashin* ladies of Ulwar at their houses; during the

year 11,012 patients were treated, and 1,499 operations performed in this hospital. The hospital has had a Lady Elgin ward added to it for *purda* wome which was opened in November by Her Excellency the Countess of Elgin.

269. *Tonk.*—The Walter Hospital for Women at Tonk, has been in charge of Miss Bose, M. B., throughout the year, and she has had an Agra qualified Female Hospital Assistant to help her. Miss Bose does much good work among the ladies of Tonk at their own houses, and the hospital is well attended; she treated 5,806 patients, and performed 497 operations during the year 1896. The hospital is too exposed for *purda-nashin* women but it is proposed to remedy this defect early.

270. *Karauli.*—The Karauli female dispensary has been closed since February last, for want of a Female Hospital Assistant to take charge of it. Endeavours are being made to have it opened again.

271. *Bhurtpur.*—The female dispensary of this city has been in charge of Bibi Rup Kuar throughout the year, and she has done excellent work in it. There were 8,963 patients treated, and 194 operations performed at this dispensary.

272. *Jodhpore.*—The Jaswant Hospital for Women was opened at Jodhpore, on the 24th of November last by Her Excellency the Countess of Elgin; it is an old palace adapted for a *purda* hospital; it is private, situated in a high, cool part of the city; over 50 in-patients can be accommodated in it, and there is an out-patient department attached to it. Miss Adams, M. D., has been appointed to the charge, and has already done a good deal of work both among the *purda* ladies of Jodhpore at their own houses and in the hospital. Up to the end of 1896 she had treated 368 patients and performed 18 operations, although the hospital was not quite completed when it was opened.

273. *Kotah.*—Miss Bessie Karimullah has been in charge of the Victoria Hospital, Kotah, throughout the year. She has done much good work in this hospital, 6,663 patients having been treated, and 719 operations performed. It is to be regretted, however, that there is only a Female Hospital Assistant in charge of this fine hospital.

274. Female Hospital Assistants are employed by the Jeypore and Bikanir Durbars. Jeypore has fallen behind the other important States in medical aid for women; there is no women's hospital in Jeypore, and no lady doctor to consult in cases of urgency.

275. Two female pupils are being educated by the Bikanir Durbar at the Agra Medical School, and one by the Jeypore Durbar. Other Durbars are endeavouring to obtain candidates with sufficient education to pass the preliminary examination for admission into the Medical School, but this has been found difficult, female education has hitherto received so little attention in Rajputana. We must for many years to come rely to a great extent on girls from outside to make up the Female Medical Subordinate Department in these States.

276. At present there are five vacancies for female medical subordinates in Rajputana, and we can hardly expect these to be filled until the many female practitioners now engaged on plague inspection duty are relieved of this work. The outbreak of plague in India has created a great demand for female medical subordinates, and they now command salaries three or four times as great as men with the same qualifications.

277. Mrs. Ives, a qualified nurse, is still employed by the Sirohi Durbar to look after the ladies and children in the palace at Sirohi.

278. Some of the Lady Doctors and Female Hospital Assistants have endeavoured to train midwives to work among the people, but as this class is illiterate, they do not improve so much as could be wished.

A. ADAMS., *M. D., Surgeon.-Lt.-Col.,*
Offg. Administrative Medical Officer
in Rajputana.

ABU;
The 3rd July 1897.

31·47	31·64	31·55	...	385 12 0	Rupees 500 have been spent in the construction of saucer drains through the principal bazar to drain off rain water, and these drains were liked by Dr. Pank last year. In previous year the Municipality has spent nearly R1,500. The drains are in first-rate condition as they are quite new.	Rupees 124-3-0. This amount was spent in deepening certain wells in April and May. The water-supply last year in April and May was rather insufficient, but since then a new well has been sunk by the Saraogies of Kekri at a cost of R1,200 at the Deputy Magistrate's persuasion, and this has improved the water-supply of the town.	R624 3 0	The system of saucer drains is being extended throughout the principal bazar in the town. Metalled roads are being gradually made; kutcha drains are being constructed in the bye-lanes.

39·75	43·43	41·42	44 9 6	4,550 6 2	*Nil*	*Nil*	The present practice of collecting night soil from private latrines in open baskets and depositing it in various places until finally carried away is objectionable.	The Municipality has sanctioned the purchase of more carts, so that the night soil will, in future, be taken straight from the private latrines to the cart, which, when full, will move off to the trenching ground. The necessity of depositing the nigh soil temporarily in various places and corners will thus be obviated.

															Add for District Lock-up . .				1,479		
															GRAND TOTAL .				21,082		

When prisoners of different classes are confined in the same jail, the expenditure on establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it or contributing to it, and not otherwise.

Hospital charges column 7 should include rations and also the cost of medicines supplied both from the bazar and Medical Store Depôts. In this series (Financial) annas and pies are to be shown where there are columns for them.

STATEMENT XIII (FINANCIAL).—*Showing the net cash earnings of convicts sentenced to labour in the Central Jail at Ajmere during the year 1896.*

1	2	3	4	5	6	7	8	9	10	11	12	13	14
Serial No.	NAME OF JAIL.	Average number sentenced to labour.	Average number employed in Jail manufactures.	Cash balance on manufacturing account in hand on the 1st January 1896.	Cash drawn on manufacturing account during the year.	Total.	Paid into Treasury on manufacturing account.	Cash balance in hand on manufacturing account on the 31st December 1896.	Total.	Cash earnings (being total of column 10 less total of column 7).	Average earnings per head calculated on columns.	Average earnings per head calculated on column 4.	REMARKS.

No. 3224-G. of 1898.

FROM

LIEUTENANT-COLONEL C. E. YATE, C.S.I., C.M.G.,
OFFG. AGENT TO THE GOVERNOR-GENERAL, RAJPUTANA,

To

THE SECRETARY TO THE GOVERNMENT OF INDIA,
FOREIGN DEPARTMENT.

Dated Abu, the 29th August 1898.

SIR,

In continuation of letter No. 3205-G.—2, dated 21st July 1897, from Sir R. Crosthwaite, I have the honour to submit a copy of the letter, noted in the margin, from Surgeon-Lieutenant-Colonel A. Adams, M.D., Administrative Medical Officer in Rajputana, forwarding his Report for 1897, on Dispensaries, Jails and Sanitation in Rajputana and Ajmere-Merwara, and on Vaccination for the official year 1897-98, together with a note by me reviewing his Report.

No. 2325, dated the 17th July 1898.

I have the honour to be,

SIR,

Your most obedient servant,

C. E. YATE, *Lieut.-Colonel,*

Offg. Agent to the Governor-General.

No. 2325, dated the 17th July 1898.

From—SURGEON-LIEUTENANT-COLONEL A. ADAMS, M.D., Administrative Medical Officer in Rajputana,

To—The First Assistant Agent to the Governor-General, Rajputana.

I have the honour to submit the Annual Report on Sanitation, Dispensaries and Jails of Rajputana for 1897, and on Vaccination for the official year 1897-98.

Mortuary Statements I to X.
Vaccination Statements I to V.
Comparative Statement of Small-pox and Vaccination.
Dispensary Statements I, II, III, IIIA, Supplement IIIA, IV, V, Parts I and II.
Jail Statements III, IX, XII and XIV.

2. The statements named in the margin are appended.

Note on the Annual Report on the Sanitation, Dispensaries, and Jails of Rajputana for the year 1897, and on Vaccination for the official year 1897-98.

Rainfall.

The rainfall recorded at Ajmere and Beawar during the year 1897, though less than that of 1896, was still above the average of the preceding six years.

In the States of Bikanir, Jaisalmir and Marwar the rainfall was far above the average, but throughout the greater part of Rajputana it was somewhat deficient. Tanks and wells, however, received a sufficient supply, and there was no scarcity of water during the ensuing season. The rain came, moreover, at a season favourable to the success of agricultural operations, and good *kharif* crops were reaped throughout almost the whole of Rajputana.

In consequence of the general failure of the spring crops and the subsequent widespread scarcity in India, prices ruled high throughout Rajputana and Ajmere-Merwara, but fell somewhat with the gathering of the monsoon crops.

Vital Statistics.

The recorded birth-rate in Ajmere-Merwara rose from 32·77 *per mille* in 1896 to 33·69 *per mille* in 1897, while the death-rate fell from 28·25 to 24·68 *per mille*. The birth-rate thus exceeded the death-rate by 9·01 *per mille* as against 4·52 in the previous year—a result that is no doubt correctly attributed to improved registration. The highest mortality occurred amongst children under five years of age, amounting to 49 per cent. of the total deaths against 55 per cent. in the preceding year. The improvement is attributed to the extension of infant vaccination. The largest number of deaths, namely, 10,883 or 81·20 of the total, are attributed to fevers. The deaths from small pox fell from 3,821 in 1896 to 158 in 1897. The large decrease is partly due to the fact that the disease was prevalent in epidemic form during the previous year. But in 1895 the number of deaths from small-pox was 754, and the very small number in 1897 is also in part due to the increased attention paid to vaccination. Deaths from dysentery and diarrhœa and from other causes were slightly in excess of those of the previous year, but deaths from injuries fell from 280 to 256.

Registration of vital statistics in Native States is still very defective. It has been attempted in seventeen States, but owing to the difficulty of obtaining registration of the birth of females and the inefficiency of the agencies employed, no reliance can be placed upon the statistics furnished. Endeavours are being made to have special registration departments formed. The average birth-rate registered was 13·90 *per mille* of population and the death-rate 15·12, but there were large variations between the different States.

Cholera.

At page 4 the number of cholera deaths is given at 19, and at page 6 at 18. There was a discrepancy in these two tables last year also.

Ajmere-Merwara had, for the second year in succession, an almost total immunity from cholera. There were only 28 cases and 18 deaths, nearly all of which occurred in Ajmere City. The Native States of Rajputana were not so fortunate, though the malady was of a milder type and claimed fewer victims than in the previous year. The States of Bhurtpore, Ulwar, and Jhallawar were the first to suffer, and the disease spread thence over the greater part of Rajputana. Every

effort was made to combat its progress, and by the end of October it had practically disappeared. The total number of cases during the year was 2,816, of which 1,496 resulted in death, as compared with 6,787 cases and 3,798 deaths in 1896.

Sanitation.

The sanitary arrangements in Ajmere-Merwara continue to work satisfactorily and many local improvements have been carried out during the year. The water-supply from the Foy Sagar, which is now in general use, is sufficient in years of average rainfall, though the chemical analysis shows that the quality is susceptible of improvement. In Beawar the water-supply is fairly satisfactory. A scheme for improving the sanitation of the town is under consideration, but is at present in abeyance for want of funds. It is proposed to appoint an Assistant Surgeon, to be paid from Local Funds, as Health Officer for Ajmere-Merwara. His principal duties will be to superintend the collection of vital statistics and to supervise vaccination operations and sanitary arrangements throughout the two districts under the orders of the Civil Surgeon.

In Native States the progress made in matters of sanitation has, on the whole, been satisfactory. At nearly all the principal cities there is now a sufficient supply of good drinking-water, and at the capitals of some of the larger States the conservancy arrangements have been vastly improved. The sanitary steam tramway at Jodhpore is now in thorough working order, and a scheme is under consideration for the extension of the Jeypore tramway. Kotah is shortly to receive a new and improved water-supply, and at Bhurtpore great improvements have been effected in the drainage and conservancy of the town to which Captain H. E. Drake-Brockman has devoted much attention. In village sanitation but little improvement is observable. It is only of late years that the more advanced members of Native society have come to realize the benefits conferred by the application of sanitary science, and progress is naturally slower amongst the ignorant rustic folk than in the towns and cities of the Province. It is, however, satisfactory to note that the subject is receiving attention notably in Marwar where "the vaccinators" (the Administrative Medical Officer writes) "are trained in elementary sanitation so that they may advise the villagers, among whom their ordinary work lies, in the protection of the water-supply and other matters relating to public health."

Vaccination.

The results under this head show steady improvement. In the Ajmere Division the number of primary vaccinations rose from 15,962 in 1896-97 to 16,480 in 1897-98 of which 98·74 per cent. were successful, against 96·82 in the previous year. The average number of persons vaccinated by each vaccinator was 1,273, against 1,252 in the previous year. The cost of each successful operation rose from 22 to 26 pies (an increase which is due to the fact that certain establishment charges which were not previously debited by the Municipality to this Department were for the first time included in the cost) and the total expenditure from ₹1,869-13-9 to ₹2,176-3-11.

During the year under report 30·09 *per mille* of the population as against 29·51 *per mille* during the previous year were vaccinated.

In Native States there was also an increase in the number of primary vaccinations, which rose from 273,413 in 1896-97 to 296,933 in 1897-98. Of these, 98·55 were successful as against 98·50 in the preceding year. The average number of persons vaccinated by each vaccinator rose from 1,171 to

1,271, and the average cost of each successful case was 21 pies as in the previous year. The total expenditure amounted to R32,338-12-6, against R30,169-3-4 in 1896-97. Marwar headed the list of Native States with the largest number of vaccinations and next in order was Jeypore. The vaccination in these two States was nearly half of the total number performed in all the States. The inspection of vaccination work, upon the importance of which the Administrative Medical Officer animadverts, has throughout the year received greater attention from all medical officers.

Dispensaries.

At the close of the year under review there were 154 Medical Institutions open in Rajputana as against 149 in the previous year, in addition to five Mission and six Railway Hospitals. Five new dispensaries were opened during the year at the following places: Merta Road, Jodhpore Station, Sojat and Bhatki (all in Marwar), and Manohar Thana in Jhallawar. The Crosthwaite Hospital at Sirohi was completed during the year and opened in the month of December. The building is highly spoken of by the Administrative Medical Officer and the institution should prove of the greatest utility. The Sirohi Durbar has also rebuilt the Sheoganj Dispensary adjoining the Erinpura Cantonment. A new wing for the treatment of eye diseases and an operating room have been added to the Hewson Hospital at Jodhpore. Many other hospitals and dispensaries have received valuable additions, and other buildings are in course of completion.

The number of in-door patients treated in Ajmere-Merwara fell from 965 in 1896 to 898 in 1897, while the number of out-door patients rose from 56,604 to 61,243. In the Political Agency and Salt Department Dispensaries the attendance of in and out-door patients was 641 and 22,857 against 781 and 22,715 in the preceding year. In the hospitals and dispensaries of Native States 15,025 in-door and 948,088 out-door patients were treated against 13,890 and 889,308, respectively, in the previous year. The increase is in part, no doubt, due to the greater prevalence of malarial fever during the latter months of the year, but there can be little doubt that the popularity of these medical institutions is gradually increasing.

In the five Mission Hospitals of which two are at Ajmere, the others being at Nasirabad, Oodeypore and Jodhpore, 202,160 out-patients and 98 in-patients were treated, as against 198,337 and 898, respectively, in the previous year, and 4,939 surgical operations were performed as against 4,605 in 1896.

The number of patients treated at the six Railway Hospitals was 24,558 as against 23,092 in the previous year, and the number of surgical operations performed was 308.

By far the larger number of patients in all the dispensaries and hospitals were, as usual, admitted on account of malarial and spleen diseases, but the greatest mortality was caused by bowel complaints. In the institutions of the Ajmere-Merwara Division and of Native States the percentage of deaths from diarrhœa and dysentery to the total number of deaths amounted to 26 and 30, respectively, a result that is no doubt due to the effects of the famine. In the Agency Hospitals and Salt Department Dispensaries, on the other hand, diseases of the respiratory organs proved most fatal and accounted for no less than 78 per cent. of the deaths.

There were 650 cases of leprosy treated during the year as against 842 in the previous year—a decrease that is the more satisfactory in view of the increased attendance at dispensaries and hospitals.

Surgical Operations.

Sixty-two thousand and four operations were undertaken during the year under review, *viz.*, 57,732 in Native States, 3,463 in Ajmere-Merwara, and 809 at Agency Hospitals and Salt Department Dispensaries, the figures for the previous year being 58,100, 3,242 and 1,033, respectively. The largest number of important operations were performed by the following Medical Officers :—

Name and designation.	No. of operations.	Period on duty.
Surgeon-Major P. D. Pank	639	Whole year.
Surgeon-Lieutenant-Colonel A. Adams, M.D. .	326	Do.
Surgeon-Lieutenant-Colonel P. A. Weir, M.B. .	125	11 months.
Brigade-Surgeon-Lieutenant-Colonel P. H. Hendley, C.I.E.	124	2 months and 7 days.
Surgeon-Lieutenant-Colonel D. ff. Mullen, M.D. .	105	Whole year.
Assistant-Surgeon Daljang Singh Khanka, M.B. .	74	8 months.

Satisfactory progress has been made in surgery in most of the hospitals and dispensaries during the year under report.

Expenditure.

The sale of quinine at Post Offices was continued during the year. It was sold at 133 against 132 Post Offices in the previous year. Four hundred and sixty parcels containing 46,920 doses were sold against 359 parcels of 36,618 doses in 1896. The largest sales were effected in towns near railway stations. The experiment will be continued for a further period.

The cost of the maintenance of hospitals and dispensaries in Rajputana and Ajmere-Merwara, amounted to R3,33,585, against R3,21,929 in the previous year. The expenditure in Native States rose from R2,99,326 in 1896 to R3,12,828 in 1897, while in Ajmere-Merwara, and in Agency Hospitals and Salt Dispensaries it fell from R11,445 and 11,158 to R10,757 and 10,000, respectively. The increased expenditure in Native States was chiefly incurred upon the construction of new hospitals and dispensaries and upon additions and improvements to existing institutions.

The larger share of this expenditure was borne by the States of Jeypore, Jodhpore and Bikanir, where the sums laid out amounted to nearly half of the total for all Rajputana.

Bubonic Plague.

The precautionary measures, initiated in 1896, for the protection of the Province from an invasion of the plague, were continued and extended during the year under report. The main routes, both of rail and road, were protected by observation camps where suspicious cases amongst passengers from infected areas were detained. Platform inspections were regularly carried out, and in this manner 30 cases of plague were detected, while numerous cases were turned back by the Inspectors detailed for duty along the Bombay border. These measures were so far successful that no indigenous case of plague occurred in Rajputana until November 1897. In that month a wealthy baniya, who had successfully evaded detection on his way from Poona, died

of plague in the village of Teuri in the Sirohi State, the day after his arrival there. An outbreak of the disease promptly followed which in a short time spread to five villages. Every precaution was taken to arrest its progress. The villages were vacated, houses disinfected and the sick were segregated. In a short time the disease appeared to have been stamped out, but in January it re-appeared and from that time continued on until the end of March after which only a few sporadic cases occurred. In all there were during the course of the epidemic 166 indigenous cases and 143 deaths, of which the larger proportion occurred among members of the baniya caste.

Surgeon-Captain Grant, whose full and interesting account of the outbreak is appended to this report, was in charge (under the orders of Lieutenant-Colonel Adams, M.D.) of the preventive operations after the recrudescence of plague in January, and to his unremitting exertions, well assisted as he was by the Sirohi Durbar, it is largely due that the disease was confined to the five villages originally attacked, and that the rest of Rajputana escaped a visitation of this terrible malady.

Jails.

The health of the prisoners in the Ajmere Jail was good. Though admissions to hospital rose from 69 to 79, yet the number of deaths fell from 4 to 2 and the death-rate from 13·26 *per mille* in the previous year to 6·84 *per mille* in the year under report.

The returns received from the twenty jails in Native States show a steady advance in the methods of jail management, though in the matter of construction there is still great room for improvement in many of the older jails.

The daily average number of prisoners in these jails rose from 4,792·23 in 1896 to 4,919·73 in 1897, and the admissions to hospital from 5,750 to 5,888, but the daily average sick fell from 225·55 to 124·95, and the death-rate from 28·17 to 23·58 *per mille*. No deaths were reported from the jails at Sirohi, Jaisalmir, Bundi and Dungarpore. The jails at Kishengarh, Ulwar, Dholpore, Karauli, Tonk, Pertabgarh and Banswara show a higher rate of mortality than in the previous year. At Banswara the death-rate reached the extraordinarily high figure of 174·41 *per mille* as against 131·60 *per mille* in the previous year. In the Dholpore and Pertabgarh jails also the rate was abnormally high. There was overcrowding in the jails at Oodeypore and Jhallawar and the death-rate was high. At Kotah and Bhurtpore also the death-rate was high, but the fact is attributed to climate. A new jail at Kishengarh is being constructed.

Female Hospitals and Medical Education of Women.

Miss Campbell continued in charge of the Mission Hospital for women at Ajmere and did much useful work among the women in hospital and in their own homes. Female Hospital Assistant Champa Bai remained throughout the year in charge of the female dispensary at Beawar, during which time 7,917 out and 30 in-patients were treated.

The Lady Dufferin Hospital at Ulwar continued throughout the year in charge of Miss Dissent, M.D., who did excellent work there and increased the popularity of the institution. In all 11,787 patients, of whom 1,632 were *pardah-nashin*, were treated at this hospital, while 2,504 operations were performed during the year.

The hospital building has been enlarged by the addition of six new wards and an operating room.

Miss Adams continued in charge of the Jaswant Hospital at Jodhpore where she has largely succeeded in securing the confidence of the people.

During the year 6,283 patients were treated and 627 operations performed at this hospital. Miss Graham succeeded Miss Perry at the Walter Hospital at Oodeypore, and Miss DeSouza succeeded Miss Bose at the Walter Hospital at Tonk. Bibi Rup Kuar was in charge of the female dispensary at Bhurtpore where she did good work. During the year 10,079 patients were treated and 196 operations performed at this dispensary. Miss Bessie Karimullah held charge of the Victoria Hospital at Kotah and is well reported on. The total number of patients treated at this hospital during the year was 8,173 and the total number of operations performed 718.

The Female wing of the Bhagwan Dass Hospital at Bikanir has been in charge of female Hospital Assistant Bibi Ashrafi. The female hospital at Karauli is still closed for want of a qualified practitioner. There are at present three vacancies for female hospital assistants in Rajputana, but it is difficult to obtain the services of qualified candidates for the appointments. The Jodhpore, Jeypore and Bikanir Durbars are educating a female pupil each at the Agra Medical School.

Inspections.

Surgeon-Lieutenant-Colonel A. Adams officiated as Administrative Medical Officer in Rajputana for the greater portion of the year, namely, from the 4th March to the 6th December 1897, when he was relieved by Brigade-Surgeon Lieutenant-Colonel T. H. Hendley, C.I.E. The latter, however, remained until the 6th April 1898 only, when he again made over charge of the post to Dr. Adams.

During the year all the jails and important medical institutions at the head-quarters of the several Residencies and Political Agencies were inspected by the Administrative Medical Officer, besides the institutions at Tonk, Bundi, Shahpura, Dholpore and Karauli. He also inspected the several plague segregation camps and supervised plague precautionary arrangements at various places.

C. E. YATE, *Lieut.-Colonel,*
Offg. Agent to the Governor-General, Rajputana.

ABU;
The 27th August 1898.

REPORT

ON

THE ADMINISTRATION OF RAJPUTANA

(SANITARY, VACCINATION, DISPENSARY AND JAIL)

FOR

1897.

SECTION I.—SANITATION AND VACCINATION.

METEOROLOGY AND ITS RELATION TO FOOD-SUPPLY.

TABLE 1.—*Rainfall of Ajmere and Beawar.*

YEAR.	Place.	INCHES.			
		January to May.	June to September.	October to December.	TOTAL.
1897	Ajmere	·61	21·71	·97	23·29
Average of previous six years .	Ajmere	1·63	20·74	·14	22·51
1897	Beawar	·15	22·11	...	22·26
Average of previous six years .	Beawar	1·48	19·31	1·13	21·92

The above table shows the rainfall of Ajmere and Beawar for 1897 and the average for six previous years.

2. During the year under report, 23·29 inches of rain were registered in Ajmere against an average of 22·51 for the previous six years, and 26·46 for 1896. The rainfall at Beawar was also above the average of the previous six years, *viz.*, 22·26 against an average of 21·92 inches, but it was below that of 1896 during which year 24·5 inches were registered.

3. The Foy Sagar from which Ajmere City derives its principal supply of water, was not completely filled by the monsoon rains; however, it contains abundance of water for the present season, and there is also sufficient water at Beawar and throughout the district.

4. In most of the States of Rajputana the rainfall of 1897 has been slightly below the average of the previous five years, but it fell seasonably for cultivation and was regularly distributed over the normal monsoon period, whereas in the previous year the rainfall was not only unusually light, but it nearly all came at one time and the crops which promised well at first withered away afterwards from want of moisture in the soil and atmosphere.

5. In Jeypore only 16·17 inches of rain were registered in 1897 against an average of 25·46 for the five preceding years; in Ulwar City there was a good rainfall registered, while in three parganas of that State the fall was little

more than half the average; in Oodeypore, 24·06 inches were registered against an average fall of 25·41 inches for the five previous years, and some of the crops withered in one part of that State from want of late rains.

6. The rainfall of 1897 was unusually heavy in Jaisalmir, Bikanir and Marwar. In Jaisalmir 11·13 inches were registered against an average of 8·58 inches, in Bikanir 17·30 inches against an average of 12·19, and in Jodhpore 17·21 inches against an average of 14·25.

7. The wells and tanks have been replenished to some extent by light showers during the cold weather and there is sufficient water throughout the States of Rajputana. The crops have been mostly very good, and grass has been fairly abundant except in a few parganas of Ulwar and Jeypore. Jaisalmir, Marwar and Bikanir have been specially favoured with grass and edible seeds as well as with excellent crops of bajra and moth.

TABLE 2.

YEAR.	Rainfall in inches.		AVERAGE PRICE OF BARLEY AT AJMERE AND BEAWAR PER RUPEE.				Death-rate per thousand of population.	
			Ajmere.		Beawar.			
	Ajmere.	Beawar.	Seers.	Chks.	Seers.	Chks.	Ajmere.	Beawar.
1893 . . .	32·83	27·50	21	15	28	14	22·78	25·13
1894 . . .	26·99	23·70	27	3	31	11	28·59	39·59
1895 . . .	24·43	15·26	21	9	23	15	25·81	30·94
1896 . . .	26·46	24·51	14	9	15	5	28·53	27·24
1897 . . .	23·29	22·26	12	7	13	3	24·28	26·08

8. The above table shows that the price of barley has been considerably above the average in both Ajmere and Beawar; this was due to the scarcity which prevailed in other parts of India in the previous year; grain was freely exported from Ajmere-Merwara during the scarcity and this kept up prices. The death-rate is shown to be lower in this table than in the previous year, both in Ajmere and Beawar, notwithstanding the high price of food.

9. Prices of food stuffs still range high in most of the States of Rajputana, the rise which took place during the famine has not yet been recovered from, and the abnormal export of wheat tends to keep up the price of grain of every description.

VITAL STATISTICS.

TABLE 3.—*Birth-rate of population of the Ajmere Division.*

STATEMENT I.

YEAR.	POPULATION.			BIRTHS REGISTERED.			BIRTHS TO 1,000 LIVING.		
	Male.	Female.	Total.	Male.	Female.	Total.	Male.	Female.	Total.
1895 . .	288,325	254,033	542,358	10,254	8,884	19,138	18·91	16·38	35·29
1896 . .	288,325	254,033	542,358	9,277	8,496	17,773	17·11	15·66	32·77
1897 . .	288,325	254,033	542,358	9,669	8,602	18,271	17·83	15·86	33·69

10. There were 18,271 births registered in Ajmere-Merwara in 1897, against 17,773 in 1896 and 19,138 in 1895; of the total births registered, 9,669 were males and 8,602 females, and the birth-rate was 33·69 *per mille* against 32·77 in the previous year and 35·29 in 1895.

11. The birth-rate exceeded the death-rate in all except four of the registration circles of Ajmere-Merwara, and the total birth-rate exceeded the total death-rate by 9·01 *per mille*. This is satisfactory, after a year of great scarcity, and shows an improvement in registration on the previous year when the birth-rate exceeded the death-rate in 17 out of the 23 registration circles.

TABLE 4.—*Death-rate of population of Ajmere-Merwara.*

STATEMENTS II TO X.

YEAR.	DEATH-RATE PER THOUSAND OF POPULATION PER ANNUM.														PERCENTAGE AMONG TOTAL DEATHS.									
		SEX.		SEASON, Quarters of the year.				CAUSES.						AGE.										
	Total.	Male.	Female.	First.	Second.	Third.	Fourth.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	Under 1 year.	1 and under 5.	5 and under 10.	10 and under 15.	15 and under 20.	20 and under 30.	30 and under 40.	40 and under 50.	50 and under 60.	60 and upwards.
1895	26·95	27·25	26·59	28·00	27·92	22·44	29·44	·53	1·39	20·77	·95	·76	2·55	29	15	4	3	4	9	8	9	10	9
1896	28·25	28·42	28·06	45·96	26·84	20·56	19·64	·02	7·05	17·34	·70	·52	2·63	30	25	5	2	3	6	7	7	8	7
1897	24·68	24·04	25·41	18·12	20·84	25·28	34·44	·04	·29	20·07	·81	·47	3·00	31	18	3	3	3	7	7	8	10	10

12. This table shows the death-rate according to sexes, seasons, causes and age in Ajmere-Merwara.

13. During the year there were 13,385 deaths registered in this division against 15,321 in 1896—a decrease of 1,936. This gives a death-rate of 24·68 *per mille* of population against 28·25 in the previous year. The highest mortality was recorded in the fourth and the lowest in the first quarter of the year, while in 1896 the highest mortality was recorded in the first and the lowest in the fourth quarter of the year. The people had not quite recovered the effects of the year of scarcity which preceded that under report, and the early cold weather carried off many of the sickly, who succumbed to dysentery and diseases of that class.

14. The deaths amongst males and females were almost equal, and the death-rate among Hindus was considerably lower than among Mahomedans, *viz.*, 23·93 *per mille* against 29·85; while in the previous year there was a slightly higher mortality among the former than among the latter.

15. There were very few deaths from cholera in Ajmere-Merwara in 1897, and the mortality from small-pox fell from 7·05 *per mille* of population to ·29. There was a higher mortality from fevers than in the previous year, and also a slightly higher mortality from dysentery and diarrhœa.

16. The mortality among children under five years of age was 6 per cent. lower than in the previous year, and this improvement has to some extent been brought about by more efficient vaccination; hitherto the mortality from

small-pox among young children in this division has been very great; there were 3,821 deaths registered from that cause alone in 1896, while in the year under report only 158 deaths were due to this disease.

17. The deaths registered exceeded the births in only 4 of the 23 circles, against 6 in the previous year, and the total death-rate was considerably lower than the total birth-rate, so there is an improvement to record in registration in this division; the female birth-rate is, however, still obviously lower than what it should be, and calls for further attention.

18. An Hospital Assistant has recently been appointed Assistant Health Officer for Ajmere-Merwara, who will superintend the registration of vital statistics, and it is hoped this professional supervision will be followed by good results.

TABLE 5.—*Deaths according to diseases in the Ajmere Division.*

STATEMENT VI.

YEAR.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Injuries.	All others.	TOTAL.
1895 . . .	289	754	11,263	512	413	1,383	14,614
1896 . . .	12	3,821	9,403	379	280	1,426	15,321
1897 . . .	19	158	10,883	439	256	1,630	13,385

19. This table shows the deaths according to diseases in Ajmere-Merwara.

20. The deaths from fevers registered were 1,480 more than in 1896, only a few deaths occurred from cholera, as in the previous year, and the deaths from small-pox were little over a twenty-fourth of what occurred in that year. Dysentery and diarrhœa were more fatal than in 1896, although less so than in 1895.

TABLE 6.—*Quarterly deaths from Cholera and Small-pox in the Ajmere Division.*

STATEMENTS VII AND VIII.

	QUARTERS OF THE YEAR.				TOTAL
	First.	Second.	Third.	Fourth.	
Small-pox	63	53	31	11	158
Cholera	...	7	11	1	19

21. This table shows the quarterly deaths from cholera and small-pox in the Ajmere Division.

22. Cholera did not appear in epidemic form in this division during the year; only a few deaths from sporadic cholera were reported during the second, third and fourth quarters of the year.

23. The deaths from small-pox fell from 3,821 in 1896 to 158 in 1897. More efficient vaccination is being done throughout Ajmere-Merwara and the supervision has been improved, so it is hoped the mortality from small-pox will continue to be much lower than it has hitherto been in this division.

TABLE 7.—*Births and deaths in Native States.*

NAME.	Population according to census of 1891.	BIRTHS.				DEATHS.								
		Male.	Female.	Total.	Ratio per 1,000 o population.	Cholera.	Small-pox.	Fevers.	Dysentery and diarrhœa.	Snake-bite.	Injuries.	All others.	Total.	Ratio per 1,000 of population.

NOTE.—The information required for this table cannot be obtained in full from Jaisalmir. The total, therefore, of column 14 does not agree with the totals of the seven preceding columns.

24. The above table shows the registration of births and deaths in the Native States of Rajputana. Registration has been attempted in 17 States as in the previous year.

25. The agencies for collecting vital statistics in these States are still very imperfect, and endeavours are now being made to have special registration departments formed instead of obtaining reports of births and deaths through Customs Officers and City Kotwals, and until some reform of this sort is accomplished, reliable data will not be forthcoming.

26. The birth-rates registered in cities varied from 6·27 *per mille* of population in Tonk, to 33·58 in Kishengarh, and in rural circles from 2·81 *per mille* of population in Sirohi State to 28·20 in Meywar. The variation in death-rates registered was equally unsatisfactory, *viz.*, from 12·39 *per mille* of population in Tonk to 49·73 in Kotah City, and in rural circles from 2·79 *per mille* in Sirohi State to 16·26 in Meywar.

27. The average birth-rate registered was only 13·90 *per mille* of population and the average death-rate 15·12. The male births registered exceeded the females by 4,564, and the deaths exceeded the births by 3,793 which is very unsatisfactory.

28. More deaths from fevers were registered in the States of Rajputana during the year than in 1896, *viz.*, 26,791, against 26,248, and fewer from cholera and small-pox, *viz.*, 1,175 and 817, against 1,592 and 4,021, respectively; dysentery and diarrhœa were also less fatal, *viz.*, 4,144, against 4,605 deaths from these causes in the previous year.

29. The attention of the Durbars will be drawn to the many defects in the above table. However, much ignorance and prejudice will have to be overcome before accurate statistics can be obtained. The prejudice against reporting female births is deeply rooted in the people of these States as female children are costly to provide for and bring no credit on the family, and no perquisites to the household; moreover, the necessity for reporting at the Kacheri the birth of a daughter, which is only referred to in domestic circles with derision, is still even less understood by the Rajput, than the introduction of the germs of disease into his system through impure water or a vitiated atmosphere.

TABLE 8.—*Number of Cholera cases reported in Ajmere-Merwara and in Native States during the year 1897.*

* Five cases and 3 deaths in Ulwar Jail.

† Five cases and 2 deaths in Dholpore Jail.

30. The above table shows the cases and deaths from cholera reported in Ajmere-Merwara and in Native States during 1897.

31. Only 28 cases and 18 deaths from cholera were reported from Ajmere-Merwara during the year against 4 cases and 3 deaths in 1896, and a large proportion of these occurred in the city of Ajmere in August, *viz.*, 10 cases and 7 deaths, a few sporadic cases only having occurred in the districts in May, August, September and October, and one sporadic case in the city in June.

32. From 8 Native States, 2,816 cases of cholera and 1,496 deaths from this disease were reported, against 6,787 cases and 3,798 deaths in 1896.

33. Cholera broke out in Bhurtpore, Ulwar and Jhallawar States about the same time in June, and extended to Jeypore, Dholpore, Marwar, Bikanir and Karauli; the disease had appeared in the Agra District before it broke out in Rajputana, it was most prevalent and most fatal in the above States in August, there was a considerable decline in cases and deaths in September, it nearly disappeared from the province before the end of October, and only one State had cases in November, *viz.*, Bikanir, where 4 cases and 3 deaths were recorded in that month.

34. Although cholera was prevalent in some parts of an adjacent province before it broke out in Rajputana, no connection could be traced. The disease was reported to have been carried from Bikanir into Jeypore by famine coolies in search of employment, and outbreaks were in some instances supposed to have been caused by unwholesome grain and seeds consumed by the poorer classes during the scarcity which prevailed before the new crops were fit for use.

35. Jeypore, Bikanir and Bhurtpore suffered most, but the disease was not of a very virulent type anywhere, and in many places only sporadic cases occurred.

36. Disinfection of wells with permanganate of potash, lime and alum was regularly carried out, and every possible sanitary precaution taken to prevent the spread of the epidemic and cut short outbreaks wherever they occurred, and these measures seem to have been successful in many instances.

37. A cholera map is attached to the report which shows the districts where outbreaks occurred, the dates of first and last cases, the death-rate per 10,000 of population, and the positions of dispensary towns throughout the province.

SANITATION.

38. *Ajmere Division*—

Ajmere	Population	41,416	Suburbs	27,427
	Birth-rate	38·53	„	32·23
	Death-rate	46·21	„	34·16

The water of the Foy Sagar is now in general use both in the city and suburbs of Ajmere, and it is much appreciated by consumers and considered a great improvement on that formerly available; the reports of the Chemical Examiner, however, show that the water of this tank contains too much organic matter, and the removal of some adjacent villages has been recommended to remedy this defect.

39. The sanitary tramway has worked satisfactorily at Ajmere during the year and the trenching grounds have been well kept; new pattern carts have been procured for the removal of waste water from private houses throughout the city, and some new urinals have lately been constructed. Some insanitary huts on the Nasirabad road have been destroyed and new buildings on improved plans erected in their stead, and much paving of streets and water courses has been carried out during the year. The Masuda tank outside the Usri gate of Ajmere City, which was both unsightly and offensive, is being filled and will be planted with trees.

40. *Beawar*—

Population	20,978
Birth-rate	40·52
Death-rate	38·52

The water-supply of Beawar is satisfactory.

41. The new scheme for the improvement of the sanitation of that town remains in abeyance from want of funds. Two new carts for the removal of waste water from dwellings have been added to those already in use, and some new urinals have been erected at suitable places throughout the town where they were required. An offensive tannery adjacent to the town has been removed, and this has greatly improved the sanitation of the place.

42. An Hospital Assistant has been appointed as Assistant Health Officer for Ajmere-Merwara, who will give some of his time to district sanitation as well as to Ajmere City and Suburbs. The appointment of an Assistant Surgeon

to the head of the Sanitary Department, who was intended to take up village sanitation in particular, has not yet been carried into effect on account of the paucity of local funds; it is, however, hoped that this appointment, so long under consideration and so essential for progress in village sanitation, will not be much longer delayed. Unless progress in village sanitation be made in Ajmere-Merwara, adjacent Native States will hardly advance in this direction, so it is hoped the scheme for the sanitary improvement of villages so long under the consideration of the Commissioner will soon be carried out.

43. *Mount Abu and Abu Road.*—The sanitary measures of Mount Abu are well directed by the Magistrate advised by the Local Municipal and Sanitary Committee and by the Residency Surgeon, Western Rajputana States. Much attention is given to drinking-water, conservancy, drainage, and the prevention. of overcrowding in the bazaar, to which there is a great tendency in the summer season.

44. The town of Karari at Abu Road Station has been much improved by the new drainage system paid for by the Sirohi Durbar, and by an improved conservancy system which is well superintended by the Hospital Assistant in charge of the Charitable Dispensary there.

45. *Jodhpore*—

Population	61,849
Birth-rate	15·97
Death-rate	15·05

The sanitary steam tramway for Jodhpore City has been completed and is now working satisfactorily; the night-soil and débris are removed five miles beyond city limits, and the sanitary condition of the capital and suburbs has already been much improved by this light railway. The Manager, Jodhpore-Bikanir Railway, gives much attention to these sanitary measures and they are certain to be attended with success.

46. An Hospital Assistant is now at the head of the Sanitary Department in Marwar, and village sanitation is receiving some attention; the vaccinators are trained in elementary sanitation, so that they may advise the villagers, among whom their ordinary work lies, in the protection of the water-supply and other matters relating to public health. The grant given by the Marwar Durbar for the sanitation of Jodhpore City has been increased from ₹1,500 to ₹2,000, and this will enable the Municipal Committee which is presided over by the Residency Surgeon to carry out many sanitary improvements that had hitherto to remain in abeyance from want of funds.

47. A Durbar grant of ₹100 a month is given for the sanitation of the town of Pali on the Jodhpore-Bikanir Railway, and this is supplemented by subscriptions from the well-to-do. In several other Marwar towns the wealthy contribute to a sanitary fund and efforts are being put forth to make this custom general throughout the towns of importance in Marwar. Famine labour was utilized last year to improve the water-supply of many towns and villages throughout Marwar.

48. *Sirohi*—

Population	6,207
Birth-rate	10·15
Death-rate	16·59

The water-supply of Sirohi City has recently been improved, and more attention is being paid to sanitation in that State than hitherto; village sanitation is, however, still very backward.

49. *Jaisalmir*—

Population	10,509
Birth-rate	32·44
Death-rate	19·60

The water-supply of Jaisalmir City and also of some towns was much increased and improved by the utilization of famine labour on tanks during 1896 and 1897. The drainage of the city has been much improved and sanitation has recently received greater attention than hitherto.

50. Village sanitation calls for more attention. The people are, however, always very healthy and epidemics are unknown in the country except an occasional outbreak of small-pox, and vaccination is being extended as quickly as possible to combat this scourge.

51. *Jeypore*—

Population	158,905
Birth-rate	27·34
Death-rate	38·78

The water-supply of Jeypore is good and abundant. The extension of the sanitary tramway for Jeypore City is under consideration, the latrine system has been improved during the year, and the conservancy system is working satisfactorily. An Assistant Surgeon has charge of the Sanitary Department, and village sanitation is receiving some attention although it is still backward.

52. The Superintending Engineer gives much attention to sanitary measures in Jeypore, and this has done much to bring about the great advance which has taken place there.

53. *Oodeypore*—

Population	46,693
Birth-rate	31·95
Death-rate	29·04

The water-supply of Oodeypore is abundant and of fair quality, although the report of the Chemical Examiner shows it to contain too much organic matter. Sanitary measures are in the hands of the police, they are backward in comparison with other important States, and the tanneries are still within city limits.

54. *Bikanir*—

Population	56,252
Birth-rate	30·88
Death-rate	32·41

The water-supply of Bikanir City is from deep wells which are not affected by the monsoon, it is good and abundant. The sanitation of the city is supervised by the Municipal Committee and by the Agency Surgeon, a new Sanitary Inspector has recently been appointed, who has improved sanitation there. Village sanitation is receiving some attention, but it is still backward.

55. *Ulwar*—

Population	52,398
Birth-rate	25·68
Death-rate	39·27

The water-supply of Ulwar City is good and abundant, there is a good conservancy system in force there under the Municipal Committee which is presided over by the Agency Surgeon. Village sanitation in that State is

making good progress, the protection of the water-supply of all villages is supervised. The villages are cleaned and the débris of the streets regularly burnt.

56. *Kotah*—

Population	38,624
Birth-rate	32·65
Death-rate	49·73

The water-supply of Kotah City has recently been improved and a scheme will soon be put into force to supply the whole population with pure water from pipes laid on from the Chambal river, above the town. The sanitation is carefully supervised by a Municipal Committee, but village sanitation requires more attention.

57. *Bhurtpore*—

Population	68,033
Birth-rate	24·99
Death-rate	47·72

The water-supply of Bhurtpore City is abundant, but it is of inferior quality, and its improvement is under consideration. The drainage has been much improved although the site of the town is low lying and good drainage consequently difficult. The sanitary condition of the town has been very much improved during the last two years, there is a sanitary board presided over by the Medical Officer on special duty there, who efficiently supervises all sanitary matters. Village sanitation is still very backward.

58. *Karauli*—

Population	23,124
Birth-rate	31·35
Death-rate	26·16

The water-supply of Karauli is sufficient and good from wells. The city is clean and well drained, and the Municipal Committee takes much interest in sanitation.

59. *Dholpore*—

Population	9,739
Birth-rate	27·52
Death-rate	47·13

The water-supply of Dholpore is sufficient and of fair quality. The conservancy system is primitive at the capital as well as throughout the country, and little attention is given to it.

60. *Bundi*—

Population	22,544
Birth-rate	...
Death-rate	...

The water-supply of Bundi is from wells and tanks, it is of fair quality but becomes scarce during dry seasons. The natural drainage of the town is good, but sanitation is backward both at the capital and in villages.

61. *Tonk*—

Population	46,069
Birth-rate	6·27
Death-rate	12·39

The water-supply of Tonk is from wells, and there is a river a short distance from the town where abundance of good water can be obtained. Insani-

tary trades are still carried on in the town, and the sanitary system is very defective; carts should be introduced instead of the present system of carriage of refuse on the backs of animals. Village sanitation should be taken up.

62. *Jhalrapatan*—

	Old.	New.
Population	10,783	23,381
Birth-rate	14·28	17·45
Death-rate	17·53	21·81

The water-supply is good and abundant from wells and tanks. The conservancy system is good, but more sweepers are required. Village sanitation requires more attention and the Chaoni tank should be protected against the waste water of the streets.

63. *Kishengarh*—

Population	15,363
Birth-rate	33·58
Death-rate	18·09

The water-supply of Kishengarh is good and sufficient. The conservancy staff is too small for the requirements of the city, and carts should be introduced instead of pack carriage which is very insanitary and objectionable.

64. *Shahpura*—

Population	11,718
Birth-rate	16·12
Death-rate	11·95

The water-supply of Shahpura is abundant and of fair quality. The drainage is defective during the monsoon season. A proper conservancy system under a responsible officer is much needed, and pack carriage should be abolished and carts introduced for removing the town refuse.

65. *Pertabgarh*—

Population	14,819
Birth-rate	31·51
Death-rate	37·86

The water-supply is good and abundant, but the wells should be better protected against contamination from bathing near them. The town is fairly clean, but sanitation is little attended to, and village sanitation has hardly been thought of.

66. *Dungarpore*—

Population	6,000
Birth-rate	...
Death-rate	...

There is an abundant supply of good water at this town, and the natural drainage is fair. Sanitation is very backward both at the capital and in the districts.

67. *Banswara*—

Population	8,234
Birth-rate	19·19
Death-rate	18·10

The water-supply of this town is good and abundant from wells and tanks. Unhealthy trades are still carried on in the town and sanitation has not been much attended to either at the capital or in villages.

68. *Deoli, Erinpura and Kherwara.*—During the year under report no change has taken place in the sanitary arrangements of these military cantonments of three of the local corps of Rajputana, which have recently been transferred from the Local Government to the Commander-in-Chief. Latrines have not yet been introduced in any of them on account of the expense which this would entail, so the men still resort to the fields in the most primitive manner, and this has frequently been condemned. This ancient custom should be abolished as early as funds can be obtained and a good conservancy system with ample latrine accommodation introduced; such an improvement in sanitation would not only benefit the health of the troops in cantonments, and the considerable civil population which has attached itself to them for purposes of trade, but it would be an excellent example to the Native States adjacent. These cantonments are otherwise in very good order, and their healthiness is undoubtedly due to the careful supervision bestowed upon them by the officers of the regiments; however, without a proper conservancy system there is always great danger of the water-supply becoming contaminated and of outbreaks of epidemic disease.

69. The Medical Officers of these regiments should be encouraged to give medical and surgical aid to the civil population in and around their stations as there are no other Medical Officers in the neighbourhood; they should also take an interest in the sanitation and vaccination of adjacent villages as this would employ their leisure, improve them professionally, benefit the people, and be a great protection to their cantonments.

70. *General Remarks.*—Steady progress in sanitation is being made in some of the States of Rajputana, and this is particularly noticeable in many of the large towns where the advanced people are beginning to recognize that the observance of the laws of health is attended by immunity from epidemic disease. There are still, however, several large capitals where little is done to improve their sanitary condition, and village sanitation demands the attention of the authorities throughout the province.

71. The protection of village wells against contamination and the improvement of surface drainage and of the drinking water-supply is of first importance, and much might easily be done in this way at little cost and with great benefit to the health of the rural population of the country.

72. The necessity for improvement in village sanitation and its effects on the public health should be constantly urged upon Durbar officials, and Residency and Agency Surgeons should lose no opportunity while on tour of impressing on headmen and villagers the advantages to health which accrue from a pure water-supply, an unvitiated atmosphere, the removal of stagnant water by thorough surface drainage, and good hygienic surroundings. This most important duty must not be left to subordinate health officers, most of whom cannot yet fully appreciate the benefits to be derived from an application of sanitary science to village life.

VACCINATION.

TABLE 9.—ABSTRACT OF STATEMENTS I AND II.

		Average number of vaccinators.	Primary Vaccination.			Re-vaccination.			Cost.		Average number of operations by each vaccinator.
			Total.	Successful.	Percentage.	Total.	Successful.	Percentage.	Total.	Per successful case.	
									₹ a. p.	Pies.	
Ajmere Division	1896-97	13	15,962	15,764	96·82	320	242	75·62	1,869 13 9	22	1,252
	1897-98	13	16,480	16,272	98·74	75	46	61·33	2,176 3 11	26	1,273
Native States	1896-97	234	273,413	269,300	98·50	779	464	59·56	30,169 3 4	21	1,171
	1897-98	235	296,933	292,630	98·55	1,829	1,471	80·43	32,338 12 6	21	1,271

73. The above table shows the primary vaccinations and re-vaccinations performed both in Ajmere-Merwara and in Native States of Rajputana during the official years of 1896-97 and 1897-98, and the total cost of this Department.

74. The primary vaccinations in Ajmere-Merwara rose from 15,962 in 1896-97 to 16,480 in 1897-98, and the successful percentage from 96·82 to 98·74. Re-vaccinations fell from 242 to 46 successful operations.

75. The increase in the number of primary operations performed and in the successful percentage both indicate satisfactory progress in this division. Re-vaccination is not much practised, and as it is not acceptable to the people it is considered advisable to make primary vaccination thorough before it is forcibly urged on them.

76. One Native Superintendent and 13 vaccinators have been employed in this division as in the previous year. The average number of persons vaccinated by each vaccinator rose from 1,252 in 1896-97 to 1,273 in the year under report, and each successful vaccination cost 26 against 22 pies; the increase has been due to charges for a Mohurrir and Chaprasis included by the Ajmere Municipality under Vaccination which had not hitherto been put down to this Department.

77. During the year under report 30·09 *per mille* of the population of Ajmere-Merwara were vaccinated against 29·51 *per mille* during the previous year, and although it is satisfactory to be able to note an increase in this direction there is still much more to be done as many children remain unprotected. The Civil Surgeon has been able to do some inspection of vaccination during the year beyond Ajmere City, and as there is now a Commissioned Medical Officer in the railway there, it is hoped he will be able to further extend his supervision.

78. In Native States the primary vaccinations rose from 273,413 in 1896-97 to 296,933 in the year under report, and 98·55 per cent. of these were successful against 98·50 in 1896-97. The increase is particularly satisfactory following a year of scarcity when the birth-rate has been below normal.

79. Vaccination returns have been received from all the States of Rajputana, except Bundi from which no information regarding this department has been received, but which is known to be much behind in the protection of its juvenile population against small-pox epidemics, still unfortunately of yearly occurrence among them.

80. There have been 235 vaccinators employed in the States of Rajputana, against 234 in the previous year. Two additional vaccinators were employed in Bhurtpore, and one less in Jodhpore for economy, and also as the vaccinators now employed are sufficient for the circles into which Marwar is divided.

81. The average number of operations performed by each vaccinator rose from 1,171 to 1,271, and the average work done by the vaccinators of different States varied from 2,505 in Bhurtpore to 157 in Kishengarh.

82. The average cost of each successful vaccination was 21 pies as in the previous year, and it varied in different States from 8 pies in Bhurtpore to 140 pies in Banswara.

83. Re-vaccination has not yet been much practised in Rajputana States as the people, hitherto accustomed to one inoculation for small-pox, cannot readily be made to understand the necessity for more than one vaccination. Only 1,471 successful re-vaccinations were performed during the year under report and 1,049 of these were done in Bikanir State.

84. There were 88,688 primary vaccinations performed in Jodhpore State, against 77,366 in the previous year, and of these 99·19 per cent. were successful; of the operations performed, 77·12 per cent. were verified by the Residency Surgeon and other inspectors. A female vaccinator is employed in this State and the appointment has been found very useful to prevent concealment of children in close *purdah* families. Sweeper vaccinators are also employed in Jodhpore to work among their own and other low castes, as many of the high caste people in these States object to the ordinary vaccinators if they touch sweepers. Brahmins have been found the most efficient vaccinators as they have influence over the people which other castes do not possess.

85. In Jeypore State 58,458 primary vaccinations were performed during the year under report, against 57,910 in the previous year, of which 99·87 per cent. were successful; of the operations performed, 46·94 per cent. were verified by the Residency Surgeon and other inspectors, against 32·73 in the previous year. It is satisfactory to note that the inspections performed by the Residency Surgeon during the year under report have very nearly doubled, and that the effect on the subordinate staff has been excellent; the successful percentage of vaccinations inspected has been higher than in 1896-97, and an increased number of operations has been done. The Native Superintendent is now being changed, and Surgeon-Major Durrell Pank is engaged in putting the entire department into thorough order.

86. In Oodeypore State 22,803 primary vaccinations were performed, against 20,933 in the previous year, and 99·74 per cent. of these were successful; of the operations performed 35·75 per cent. were verified by the Residency Surgeon and other inspectors. The increase in vaccination is satisfactory, but there has been a falling off in inspections; however, the Residency Surgeon was absent on other duty part of the year, and plague prevention took him out on the border a considerable time where there was little opportunity for vaccination inspection.

87. In Bhurtpore State 37,576 primary vaccinations were performed, against 20,323 in the previous year, 98·27 per cent. of which were successful. The Medical Officer on special duty there and other inspectors verified 61·30 per cent. of the operations performed. Surgeon-Captain Drake-Brockman has reorganised the whole department and put it into a very satisfactory state.

88. In Ulwar, 24,186 primary vaccinations were performed, against 25,452 in the previous year, and 99·90 per cent. of these operations were successful; the Agency Surgeon and other inspectors verified 74·65 per cent. of the vaccinations performed. Surgeon-Major Harrington has been very zealous in the cause of vaccination, and the work has been well in hand for many years, so the falling off in primary vaccinations can only be accounted for by a reduced birth-rate consequent on the previous year of scarcity. Vaccination in Ulwar was started and worked up to a very advanced condition by the late Dr. T. ffrench Mullen long before it had made much progress in the other States of Rajputana.

89. In Bikanir State 22,784 primary vaccinations were performed, against 26,648 in the previous year, and 99·47 per cent. of these operations were successful. The falling off in primary vaccinations has been attributed to scarcity in the early part of the year under report, before the abundant crops were fit for use, to reduced birth-rate, and to sickness of two vaccinators. The Officiating Agency Surgeon was taken away for military duty and the appointment was vacant during a considerable period of the cold weather when alone inspections are possible in the desert; consequently, little superintendence of vaccination was possible, and this was no doubt also responsible to some extent for the great reduction in the number of primary vaccinations performed.

90. In Kotah State 10,760 primary vaccinations were performed, against 10,294 in the previous year, and 95·59 per cent. of these were successful; and in Jhallawar 7,224, against 7,159. There has been a falling off in the vaccinations performed in these States and also in supervision during the absence of Surgeon-Lieutenant-Colonel J. Crofts, the permanent Agency Surgeon, so it is satisfactory to note the above increase, although it is but small. The appointment of Agency Surgeon in these States was vacant a considerable part of the camping season, so little superintendence of vaccination was possible.

91. In Tonk State 5,262 successful primary vaccinations were performed, in Dholpore 4,889, in Sirohi, including Abu, 4,601, in Karauli 2,798, in Jaisalmir 1,721, in Kishengarh 921, in Shahpura 888, in Pertabgarh 389, in Dungarpore 278, and in Banswara 175.

92. Vaccination is very backward in Kishengarh, Pertabgarh, Banswara and Dungarpore, and the attention of the Residency Surgeons of Jeypore and Oodeypore, the Superintendents of Vaccination in these States, will be directed to the unsatisfactory condition of this most useful department.

93. Lymph is kept up throughout the year in most of the important States of Rajputana, and humanized lymph is generally in use; however, calf lymph is occasionally used. There is rarely any objection raised against arm-to-arm vaccination and no bad results have been seen from this method when the vaccinators have been carefully trained and their work regularly supervised. Ulceration and suppuration is invariably due to dirty instruments or carelessness of some sort and any superintendent should be able to prevent its occurrence; specific disease is not readily communicated through vaccination, and it is impossible with proper care and judgment.

94. It is proposed to introduce calf lymph preserved in glycerine extensively during the coming vaccination season.

95. The Sirohi State has now been divided into five vaccination circles and two additional vaccinators appointed; a second Hospital Assistant has been appointed who will superintend vaccination in the State and it is hoped marked progress will be made in this department during the current year.

TABLE 10.—*Verification of Returns of Vaccination.*

Name of District or State.	Superintendent and Native Superintendent.	Number of towns and villages visited.	Successful cases seen.				Unsuccessful cases seen.	Total number seen. * The Staff Surgeon, Nasirabad, performed the duties of Superintendent.

† The Residency Surgeon, Western Rajputana States, also supervises operations in the Jaisalmir and Sirohi States.

‡ The services of Hospital Assistant were utilized for a short time as Native Superintendent.

The Residency Surgeon, Meywar, also supervises operations in Pertabgarh, Banswara and Dungarpore.

96. The above table shows the verification of vaccination by the Civil Surgeon, Ajmere, by the Residency and Agency Surgeons and by subordinate inspectors.

97. The Residency Surgeon, Jodhpore, inspected 551 towns and villages in Marwar, Jaisalmir and Sirohi, and saw 12,762 vaccinated children, against 12,419 in the previous year, and 98·28 per cent. of these had been successfully operated upon. The Residency Surgeon, Jeypore, inspected 408 towns and

villages in Jeypore and Kishengarh, and saw 8,130 vaccinated children, against 4,183 in the previous year, and 98·95 per cent. of these had been successfully operated upon. The Residency Surgeon, Oodeypore, inspected 151 towns and villages in Meywar, Pertabgarh, Banswara and Dungarpore, and saw 3,943 vaccinated children, against 4,158 in the previous year, and 97·92 per cent. of these had been successfully operated upon. The Agency Surgeon, Ulwar, inspected 664 towns and villages, and saw 7,428 vaccinated children, against 5,963 in the previous year, and found 99·89 per cent. of these had been successfully operated upon. The Agency Surgeon, Kotah and Jhallawar, inspected 118 towns and villages, and saw 884 vaccinated children, against 4,603 in the previous year, and found that 95·81 per cent. of these had been successfully operated upon. The Civil Surgeon, Bikanir, inspected 15 towns and villages and saw 2,079 vaccinated children, against 2,731 in the previous year. The Medical Officer on special duty in Bhurtpore inspected 212 towns and villages and saw 8,342 vaccinated children of whom 99·72 per cent. had been successfully operated upon, and the Civil Surgeon, Ajmere, and the Superintendent of Vaccination, Nasirabad, saw 979 vaccinated children, against 1,237 in the previous year, and found that 98·77 per cent. of these had been successfully operated upon.

98. The attention of Residency and Agency Surgeons was directed in my last report to the necessity for more thorough supervision of vaccination, it was pointed out that the Medical Officer in a Native State has no more important duty than his district inspection work, and that this should not be left to Native subordinates mostly too ignorant to thoroughly realize its usefulness. Efficient vaccination can alone stamp out small-pox epidemics which are still unfortunately very frequent in these States and terribly fatal to young life, and nothing should be allowed to stand in the way of our utmost efforts being put forth to combat this dreadful scourge.

99. The Administrative Medical Officer inspected vaccination at the headquarters stations and found that much progress is being made, and that the Residency, Agency and Civil Surgeons are generally taking a keen interest in this most useful work, the success of which so greatly depends upon their exertions and influence with the people.

SECTION II.—DISPENSARIES.

100. There are now 154 hospitals and dispensaries in Rajputana, against 149 in the previous year, besides five Mission and six Railway hospitals. The new institutions are the following: one at Merta Road, one at Jodhpore Station one at Sojat, and one at Bhatki in Marwar, and one at Manoher Thana in Jhallawar.

101. The Crosthwaite Hospital at Sirohi has been completed, and it was opened by the Agent to the Governor-General on the 7th of December last. It is a well-planned, well-situated and well-equipped hospital which is intended by His Highness the Maharao of Sirohi, K.C.S.I., to take the place of the Old Sirohi Dispensary no longer up to the requirements of the place. The Sheoganj Dispensary adjacent to Erinpura Cantonment has been rebuilt by the Sirohi Durbar and will shortly be open for the treatment of patients. This dispensary will give increased and improved accommodation to both in-door and out-door patients, it is conveniently situated and in every way a great improvement on the old institution.

102. The Hewson Hospital in Jodhpore City has had a new wing for eye diseases added to it, capable of containing 25 beds, and also a new and well lighted building for the performance of operations, with one room for eye and the other for ordinary surgery. This extra accommodation has been long needed and it has already enabled the hospital staff to greatly increase the surgical work of the institution. A new dispensary is under construction in Sojat town in Marwar, the building which is being temporarily utilized as a dispensary is at too great a distance from the people, and it is wanting in accommodation.

103. The new hospital at Dholpore has been completed and opened; it is well situated and will supply a long-felt want in that town; it contains 12 beds, there are well lighted compounding and operating rooms in the building, and the wards are well-lighted and ventilated.

104. A new operation room and an examination room have been added to the Ulwar Hospital, and the out-patients' department of the institution has been improved.

105. A new dispensary building has been completed at Kishengarh, and the Samode Dispensary in Jeypore State is ready to be opened.

106. The Bhurtpore General Hospital has not yet been completed but a small wing has been finished, and it is hoped some advance will be made with the rest of the building shortly when sufficient funds become available.

107. The Churu Hospital in Bikanir State, which is being built by the family of the late Rai Bahadur Seth Bhagwan Dass, is approaching completion, and the services of a Government Assistant Surgeon have been asked for to take charge of it. This family has done much for the improvement of hospitals in Bikanir, and has set a noble example to the wealthy Marwaris of Rajputana.

108. It is proposed to open new dispensaries in Kotah and Marwar during the current year, and much progress is being made in hospitals and dispensaries throughout Rajputana.

In appendix. 109. Table XI shows in a condensed form the medical relief given in Mission, Railway and all other hospitals and dispensaries in Rajputana.

C

TABLE 12.—*Cases and Deaths.*

	1897	641	22,857	29·21	261·72	16·63	4·18	2·73	18	2·81
Native States	1896	13,890	889,308	646·84	7,731·74	16·99	3·17	1·54	492	3·54
	1897	15,025	948,088	651·68	7,928·98	15·83	3·05	1·56	737	4·90

110. The above table shows the in-door and out-door patients treated, the daily average number of sick, the average duration of treatment, the percentage of in-door to the total treated, and the deaths and percentage of deaths among in-door patients for the year under report as well as for the previous year.

111. In Ajmere-Merwara 898 in-door patients were treated in all hospitals and dispensaries, against 965 in the previous year, and 61,213 out-door patients, against 56,604. The falling off in in-door patients may be attributed to the better condition of the people during the greater part of the year under report; scarcity prevailed throughout 1896, and this drove many to seek in-door relief for the diet given who would not have accepted it under better circumstances.

112. The increase in out-door patients is satisfactory as indicating greater popularity of the medical institutions and of Europe methods of treatment, but it is also to some extent due to somewhat greater prevalence of malarial fevers consequent on the heavier rainfall and the weakened condition of some of the people after great scarcity of food.

113. In Agency and Salt Revenue Hospitals and Dispensaries 641 in-door and 22,857 out-door patients were treated, against 781 and 22,715 in and out-door patients in the previous year. These hospitals and dispensaries are kept up for Government servants and followers attached to the Political and Salt Revenue Departments, but the Hospital Assistants in charge are encouraged to treat the villagers with whom they come in contact both adjacent to head-quarters and on tour, and as variations in opportunity affect the totals treated, no definite deductions can well be drawn from these figures.

114. The deaths in these hospitals and dispensaries rose from 15 to 18, and the increase in mortality indicates a somewhat less healthy season than the previous year as the deaths were all among the head-quarters attendance.

115. In the hospitals and dispensaries supported by Native States, 15,025 in-door and 948,088 out-door patients were treated, against 13,890 in-door and 889,308 out-door patients in the previous year. This increase is very satisfactory, as it may to some extent be attributed to the increasing popularity of the medical institutions and of Europe methods of treatment, and not wholly to new institutions or greater prevalence of disease among the people.

116. There was an increased attendance at nearly all the hospitals and dispensaries in these States, and the increase in in-door patients was greatly due to surgical operations performed.

117. The percentage of deaths among in-door patients rose throughout the dispensaries of Rajputana, and this was no doubt considerably due to the low condition into which the poorest stratum of the population had fallen during the time of scarcity which preceded the harvest of the year under report. The deaths from diarrhœa and dysentery were more than in the previous year, and these diseases would be more fatal among a population reduced by inferior food and scarcity than when the people's existence is made easy with abundance of good things.

TABLE 13.—*Causes of Admissions and Deaths.*

STATEMENT III.

		PERCENTAGE TO TOTAL CASES AND DEATHS.

	1897	3	...	·54	...	24	30	3	·68	6	33

118. The above table shows the causes of admissions and of deaths in all hospitals and dispensaries in Rajputana.

119. As usual malarial fevers and spleen diseases were the most common ailments seen at the dispensaries. In Ajmere-Merwara these affections gave rise to 23 per cent. of the total treated, against 19 per cent. in the previous year; but they were less severe and the deaths from them were 18, against 25 per cent. in 1896. In Agency and Salt Revenue Dispensaries 30 against 24 per cent. of the total treated were for malarial fevers and spleen diseases, and the deaths from these causes were only 5 against 13 per cent. of the total of the previous year. In the hospitals and dispensaries of Native States 19 against 15 per cent. of those treated were for malarial fevers and spleen diseases, while the deaths from these causes were only 3 against 9 per cent. of the total of 1896.

120. Lung and respiratory diseases gave rise to 6 per cent. of the total treated in the Ajmere Division, as in the previous year, and to 19 against 10 per cent. of the deaths: in Agency and Salt Revenue Dispensaries these affections gave rise to 9 per cent. of the total treated as in 1896, and to 78 against 47 per cent. of the total deaths, and in Native States dispensaries to 6 against, 7 per cent. of the total treated and 24 per cent. of the total deaths as in the previous year.

121. Diarrhœa and dysentery gave rise to 4 per cent. of the total treated in Ajmere-Merwara as in the previous year, and to 26 against 27 per cent. of the deaths; in Agency and Salt Revenue Dispensaries 5 against 6 per cent. of the

treated, and 12 against 7 per cent. of the deaths were due to these affections; and in Native States 5 against 4 per cent. of the total treated, and 30 against 20 per cent. of the deaths. The high death-rate from these affections in Native States institutions was to some extent due to the scarcity which prevailed in the early part of the year, as this was more severe in many States of Rajputana than in Ajmere-Merwara.

122. Skin diseases were less common throughout than in the previous year, and this may be attributed to the greater abundance of water, as in 1896 the water-supply did not admit of much bathing or washing.

TABLE 14.—*Cases of Leprosy treated in the Dispensaries of Rajputana.*

123. The above table shows the cases of leprosy treated at all hospitals and dispensaries in Rajputana.

124. There were 650 cases of leprosy seen in Rajputana hospitals and dispensaries during the year under report, against 842 in the previous year, and 835 in 1895. This is a very considerable decrease notwithstanding the increase in dispensaries and the great increase in attendance, and there are no data in the records of the medical institutions of Rajputana to lead one to suppose that the disease is on the increase as was at one time feared.

125. *Small-pox.*—Small-pox occurred in Ajmere-Merwara and in 14 States of Rajputana, against 17 States in the previous year. There were 158 deaths reported in Ajmere-Merwara from this disease, and 817 in Native States against 3,821 deaths in the Ajmere Division, and 4,021 in Native States in 1896. Vaccination is now doing much to mitigate the ravages of this dire disease throughout Rajputana. The juvenile population of Ajmere City is much better vaccinated than hitherto on account of the passing of the Municipal law making vaccination compulsory, and the mortality from small-pox in this city has been greatly reduced in consequence.

126. *Snake-poisoning.*—Strychnia has not been found in Rajputana to possess the antidotal properties against snake-poisoning which Dr. Mueller of Australia assigns to the drug. Calmette's antivenin has been supplied to some of the hospitals and dispensaries, but there has not yet been sufficient opportunity for testing its value.

Bubonic Plague.

127. The Rajputana border has been extensively exposed throughout the Bombay epidemic to plague infection on account of its position; moreover, the enterprising character of the Marwari takes him all over India to engage in trade, and although these traders spend most of their lives abroad they keep up houses and family connections in their original towns and villages in Rajputana; consequently when plague broke out in Bombay and the Deccan, their return in thousands was only what we anticipated, and extensive observation camps had to be arranged all along the lines of rail and road, as well as outside the cities, towns and villages throughout the province, to ensure their thorough disinfection and prevent their carrying the germs of the disease into their homes either in their persons or clothes.

128. Occasional deaths from plague occurred among the refugees; there were 30 cases and 22 deaths among Bombay passengers taken from the train and segregated along the lines of Railway.

129. In the middle of November 1897 a wealthy Seth found his way into the village of Teuri in Sirohi State, and died there of plague; his funeral ceremony was well attended, and it was very soon followed by an outbreak of indigenous plague in this and three other villages adjacent. The villages were early vacated and disinfected, and the outbreak seemed to stop after this, but the weather was extremely cold at the time and the people could not be kept out of their houses, so other cases soon occurred after re-occupation, and at the same time Poona refugees were attacked in the town of Kalindri which had a population of over 4,000 inhabitants and was only two miles distant from one of the villages early infected.

130. Plague was at first confined to Poona refugees and their families and connections, but it afterwards spread to others in the towns and even to some of those residing at their wells some distance away.

131. As soon as the recrudescence took place the towns were all again promptly vacated and the people kept out in camps. The encampments were widely scattered over the fields. The huts were burnt and the sites were changed when cases occurred in them, those exposed to infection were freely disinfected, and the sick and their attendants were carefully segregated; nevertheless cases continued to occur till the hot weather had well set in.

132. Between November 1897 and the 25th April 1898, there were 166 indigenous cases and 143 deaths in five villages of Sirohi State.

133. The disease was of the pneumonic type and very rapidly fatal at first, but afterwards glandular swellings were common and some recoveries took place.

134. Little was attempted in the way of treatment as the people were imbued with a strong belief that the authorities wished to poison all those attacked, to prevent the spread of the epidemic, and some of them even considered the doctor's touch fatal.

135. The Sirohi Durbar and State officials did their utmost to relieve the sufferers and prevent the spread of the epidemic; cordons were placed around the infected villages, the roads were guarded against runaways from the camps entering healthy villages, and these precautions did much to save Rajputana from a general outbreak.

136. Surgeon-Captain Grant, whose complete report on the outbreak is included, was placed in charge of the infected area after the recrudescence; he

encamped at Kalindri, and even when much out of health on one occasion, he never flinched from his post nor neglected his arduous daily round; he displayed much tact and patience throughout many disturbances and threatened risings, and he was unremitting in his efforts to relieve the sufferers and prevent the spread of the disease.

137. The Resident, Western Rajputana States, made inspections of the plague camps and area from time to time, and the Residency Surgeon gave up a good deal of his time to plague duty while the outbreak lasted.

Precautions against Plague.

138. *Chupper* huts for the accommodation of refugees from infected areas were erected along the lines of rail throughout Rajputana, also on the leading roads and outside many towns and villages, so the people have been comfortably sheltered during their period of segregation and there have been comparatively few complaints made by them. They had every opportunity of communicating with their friends in the open air during the period of observation, and of transacting business when this was not attended with danger to the public health.

139. The imported sick and their attendants were carefully isolated in separate hospital camps, and when a patient died or recovered, everything including the hut in which the case had been treated was burnt. While the refugees were in these segregation camps they were obliged to expose their baggage to the sun and to wash and disinfect their clothes, and this had an undoubted effect in preventing the spread of infection as there is nothing more destructive to the plague germ than the heat and light of the sun and free ventilation.

140. Surgeon-Captain Grant has obtained a quantity of M. Haffkine's prophylactic, inoculations will be carried out soon as opportunity offers, and comparisons made with a view to test its effect against the spread of plague.

Plague Inspection.

141. Platform inspections of all passengers from infected areas have been carried out at Abu Road, Ajmere and Bandikui, and all passengers who have alighted in Rajputana, at stations on the Rajputana-Malwa Railway, or the Jodhpore-Bikanir Railway, have been regularly examined and segregated if found to be suffering from suspicious fever or likely to endanger the public health if allowed into the villages. In these States it would not be possible to obtain information regarding people from plague-infected places who passed into villages, as there are no police who could be relied upon to perform this duty, so it was found necessary to detain suspicious new arrivals under observation for a period of ten days, during which time their clothes and baggage have been thoroughly exposed to the sun or otherwise disinfected, and this had an undoubted good effect.

142. The Marwar, Sind, Kutch and the Sirohi-Palanpore borders were inspected by the Residency Surgeon, Western Rajputana States, and observation camps were kept up at border villages throughout the epidemic in Palanpore, Kutch and Sind, and the Meywar-Bombay border was inspected by the Residency Surgeon, Meywar. Hospital Assistants were placed in charge of these borders to make regular inspections of the villages and prevent plague becoming established in Rajputana. Much inspection of villages was done by the Residency Surgeon, Western Rajputana States, and by the Special Plague

officer adjacent to the infected area in Sirohi State, to ascertain that plague was not spreading in that State, and the segregation camps along the railways were regularly inspected to prevent irregularities on the part of subordinate officials. Thirty cases and 22 deaths were detected along the lines of rail by these inspections, and many parties with plague among them were kept back from border villages by the border inspectors. Without the above precautions plague must have become epidemic throughout this part of India.

143. The following table shows the total deaths in Sirohi villages:—

Name of village.	Deaths.
Teuri	29
Sheudial	25
Kalindri	69
Wardra	10
Sunpur	5
Total to end of March 1898	138
Add those occurred in April at Kalindri	5
GRAND TOTAL	143

REPORT BY SURGEON-CAPTAIN J. W. GRANT, M.B., ON PLAGUE DUTY IN SIROHI VILLAGES.

January to April 1898.

144. In the summer of 1897, acting on the advice of the Residency Surgeon, Western Rajputana States, camps were started at the different railway stations for detaining arrivals from plague-infected districts. It was owing to the Native officials in charge of one of the camps having failed to carry out the duties entrusted to them that plague was introduced into the State.

145. About the middle of November, a rich bania, named Kishna, who was reputed to be worth three lakhs of rupees, came from Poona, and passed through the camp at Pindwara without having undergone the prescribed period of detention. On the day after his arrival at his village of Teuri, he died of plague. His funeral ceremonies were attended by friends from Sheudial and Kalindri and, within ten days, plague of a virulent type appeared in all three villages. A little later Sunpur and Wardra became infected, doubtless from the same source. But I have not been able to establish the connection. It is particularly difficult to do so, for every one tries to deceive when asked for any information.

146. The nature of the disease was recognized by the villagers who call it *chua ka rog* (rats' disease). Had the Thakur reported to the authorities, there is every reason to believe that the epidemic could have been quickly stamped out. But it was only on one of his periodical inspections on 27th November, that the Residency Surgeon, Western Rajputana States, became aware of what was going on. He promptly removed all sick and suspicious into camps, and in a very short time the epidemic stopped. After an interval of ten days without an attack, the segregated were permitted to re-occupy their houses, which had meanwhile been disinfected. It does not appear that allowing them to return had anything to do with the subsequent recrudescence. In none of the villages were the first attacks among those who had been previously segregated. But in each, the first cases were in houses some distance removed from those formerly infected. This fact agrees with a statement of the Health Officer of Bombay, who found that, when imported into a district,

the houses adjoining the infected one were not the next to suffer. The inference is that the disease is carried by rats, which after having become infected are able to move some distance off before they succumb.

147. Plague did not re-appear in Sunpur, and in Wardra there were only eight additional cases. The escape of these two villages is to be accounted for, by, the fact that they were attacked secondarily to, and at a somewhat later date, than the others, and that the sick and suspicious were sent into camp, before the disease had time to establish itself in the houses.

Recrudescence in January 1898.

148. On 2nd January, the Hospital Assistant on duty reported two cases of plague at Kalindri and three at Teuri. On the 4th January, I went to Sirohi, and was shown round the plague area by Surgeon-Lieutenant-Colonel Adams. All the cases were found to be among banias, and accordingly the members of that caste, in both villages, were sent into camp. Except that the infected were of the same caste, we could trace no connection with the cases of December. The people were unwilling to give any information which would serve to clear up the matter, and it was evident that no importance could be attached to their statements.

149. They showed the greatest dread of plague. In a field at Kalindri a woman was seen, in an almost moribund condition, of whose relatives none would venture near enough to give her a drink of water. In a house in the village, a bania was found, whose wife and family had run away, and there was difficulty in finding bearers to carry him to the plague camp.

150. On the 6th January plague re-appeared in Sheudial—but first among the Chamar caste, and not the banias, who had suffered in December.

151. On the 11th January, the villages of Teuri and Sheudial were ordered to be evacuated. Four days later a telegram ordering evacuation of all infected villages was received from the Residency Surgeon, who came himself next day, and helped to get the people out. Great difficulty was experienced in persuading them to vacate their houses, more especially the Rajputs, and it was several days before they were all out.

152. The plan adopted was as follows :—

On one side of each village was chosen a site for a plague camp, to which the sick (each with one attendant) were sent. Near to it—but far enough removed to obviate all risk of infection—was the segregation camp, for the relatives and those who had been in contact with the sick. On the other side of the village was placed the health camp, to which the segregated were also allowed to go, after having been detained for fifteen days. The owners of fields were allowed to live at their wells which were inspected daily by mounted police. It was intended to have a nominal roll of the residents at each well, but as only the Hospital Assistant and Police Inspector could write, the idea had to be given up. On the roads leading from the villages were stationed picquets of police to prevent any one running away.

153. It was impressed on the Sirohi authorities, that it was of the utmost importance, that each village should protect itself and they were asked to instruct all head men to admit no strangers, without first keeping them, for ten days, under observation in huts outside.

Plague-infected Area.

154. The village of Kalindri is situated twelve miles to the west of Sirohi capital, and has a population of over 4,000. Two-and-a-half miles from it is Sheudial (population 1,200), and two miles further on is Teuri (population 1,800). Both villages lie almost due west of Kalindri. About two miles south east of Teuri is Wardra, which has a population of 400. On the road between it and Teuri is a small "basti" of twenty-five houses, which entirely escaped the epidemic. For guarding all this area, there were one hundred and forty police and six sowars. Considering that the wells extend on all sides for about two miles from the villages, it is not to be wondered at that a few persons managed to escape. But owing to the admirable system of espionage kept up by the Sirohi Durbar, nearly all were caught, and detained under observation outside other villages.

Progress of the Epidemic.

155. The infected villages were entirely evacuated by the 20th January, after which date, only officials were allowed to enter. The disease continued at Kalindri in epidemic form until the end of February, and sporadic cases occurred up till the 16th March. Between that date and the end of the month, there were three suspicious deaths. As no *post mortem* examination was allowed, the diagnosis was uncertain, but all precautions were taken as for plague.

156. The last attack of plague in Teuri occurred on 31st January, and in Sheudial on 2nd February. These two villages are much smaller than Kalindri, and so more easily controlled. But the early disappearance of plague from them is to be explained, chiefly by the fact, that there was not such a strong opposition to going into camp, and the people were moved out ten days before Kalindri.

157. As only one case had occurred in Wardra (on 3rd January), it was not considered necessary to order evacuation, but the village was inspected every day. On 21st January three cases of plague were found in it. They and their families were at once segregated, and, within twenty-four hours, the village was entirely vacated. Four more cases occurred, the last on January 25th, but the disease was confined to the two families attacked on the 21st.

158. The Porwal banias of Kalindri (80 families) who lived in a compact camp, about one hundred yards from the village, had not a single case among them till the 2nd February. About the same time, new cases occurred in four families in the health camp occupied by the Oswal banias (220 families). It was considered advisable to move both camps to sites farther off from the village. Each family had to prepare a detached hut, with a clear space around, of about 30 yards. At first they refused to move, objecting to have to build huts a second time. The advantages were explained to them and it was pointed out, that being so far apart in the event of a case occurring, the infected hut only would have to be burned down. After they were spread out in this way, only a few more cases occurred among the banias.

159. As there were no instruments, meteorological observations could not be taken. In appendix A is shewn (in red) the mean daily temperature taken in the town of Sirohi. On the same sheet, is represented diagramatically the daily aggregate plague attacks in the four villages. The numbers are too

small for any deductions to be made. But it is interesting to note that, while the low temperatures, recorded on February 13th, 19th, 24th and March 3rd, were followed by an increase in the number of attacks; after the rise in temperature on February 17th, 26th and March 5th, the attacks fell to zero.

Sporadic Cases in April.

160. On 12th April three cases of plague were found at a well, owned by Brahmins. On enquiry it was discovered that there had been three sudden deaths, in the same family, six days before. At the time no definite conclusion could be arrived at, as to the source of infection. Like the other inhabitants the stricken family had lime-washed their house in the village. But as no case of plague had occurred in it, nor in any house near, it seemed very improbable that the contagion could have been contracted there. The only alternative was, that the disease had been carried by the rats to the well, where some grain was stored. When questioned they stoutly denied, but they have since confessed that dead rats were seen two or three days before the first death. A cordon of police was placed around the well, and the disease did not spread. Of those attacked only one survived.

Features of the Disease.

161. The people objected to physical examination, saying that the doctor's touch was poisonous. In consequence, after the diagnosis was established they were generally left severely alone. It is not intended to give any detailed account of symptoms, but only to refer to some points which seem to be of special interest.

162. *Buboes.*—Buboes were present in practically all cases, except the pneumonic and the less acute of that type sometimes presented superficial glandular enlargements after two or three days. The groin was the commonest situation, and, next in frequency, the axilla. In four cases (all fatal) the neck glands were enlarged. In the more acute cases, whose onset was characterized by a well-marked rigor, a bubo was usually found, at the first examination of the patient. In its absence, the following conditions proved most reliable for diagnosis.

(1) Tongue—a white fur on the dorsum, while the tip and edges were bright red.

(2) Facial expression—dazed and apathetic, or expressive of anxiety, with the conjunctiva bright and glistening, sometimes injected.

(3) Muscular weakness, which was out of all proportion to the degree of fever present.

(4) Rapid, compressible ("running") pulse.

Infection.

163. It is stated in Maclean's report on the Pali Epidemic of 1836, that "it is evident that the atmosphere of contagion is extremely confined." Our experience in the Sirohi epidemic points to a similar conclusion. Among the segregated and the attendants of the sick, only eight cases occurred. In all these (except one) symptoms of plague appeared so soon after, as to lead one to believe, that the disease must have been in the incubation stage, before the

time of segregation. The one exception was a Brahmin beggar, who persisted in wandering about, and it is probable that he caught the disease elsewhere.

164. Of the officials and police one hundred and fifty in all, two caught the disease and died. Their history is interesting, and points strongly to individual susceptibility.

165. The first case was a sowar, who on 11th January fell from his horse when accompanying me to Teuri. He was seized with convulsions, which lasted for about five minutes. In the evening, he was able to ride back to Kalindri. Next morning he had a large bubo in the left groin, and died the same afternoon: along with two other sowars (who carried his corpse to the burning ground), and six policemen, he had been living in a house in the outskirts of the village. They all took their food together, and, so far as could be seen, were equally exposed to infection.

166. The other case occurred on 18th February, in one of the cordon of police around Kalindri. His duty did not require him, and he was not known to have entered the village. His hut was at once burnt down, and the five men who lived with him escaped.

Disinfection.

167. A.—*Of the individual.* As with medicines disinfectants were objected to, but a certain amount had to be insisted on. In the scare immediately after the outbreak, there was often difficulty in getting the corpses carried to the burning grounds. Accordingly, two Bhils were kept for that purpose in each village. Later on the bodies were generally disposed of by the relatives. In no case were there allowed to attend more than three men who were examined to see that their hands and arms were free from abrasions. They were stripped to their *dhoties*, which were afterwards burnt. Before resuming their clothes, they had to disinfect themselves. A policeman attended to see it done.

168. At first it was the custom to disinfect with perchloride of mercury solution, the clothes and bedding of contacts removed to the segregation camp. A few cases (of course in the incubation stage at the time of disinfection) having appeared shortly after the operation, so much objection was raised, that as the discontent threatened to become universal, it had to be given up for a time. Free exposure of clothes, etc., to the sun's rays had to be trusted to, and this seemed to answer the purpose equally well.

169. B.—*Of the houses.* At the time of evacuation of the villages, people could not be got to work. It was considered advisable to let disinfection lie over until the hot season set in. Work was begun on 3rd March. For the houses, in which plague cases had actually occurred, work parties were enrolled. They were kept in a separate encampment, but no one contracted the disease. First of all the tiles were removed from the roofs of all houses in the villages. After an interval of a week, allowed for free ventilation, work was begun on the inside. The plague houses were disinfected with perchloride of mercury solution (1 in 1,000). Then the floor of every house was dug up, the earth carried outside and burnt. Lastly the interior of every house was thoroughly lime-washed. The police went about and saw that shoes were worn. The houses remained unroofed until after the re-occupation of the villages on 23rd April.

Treatment and Results.

170. It has been already mentioned, that the people objected to physical examination, medical treatment they absolutely refused to have, and really I do not think that they suffered much loss. The percentage of recoveries is higher than in the town of Bombay where a large population of the sick are treated in well-equipped hospitals, and have the advantage of European nursing.

171. In Bombay, the figures up to May 1st are, 29,396 attacks and 25,568 deaths, representing a mortality of 86·97 per cent. In Sirohi, out of one hundred and forty attacks, one hundred and seventeen died, giving a mortality of 83·57 per cent. The comparison is made simply to show how little medical treatment avails, in the virulent type of the disease. In Appendix B, it will be seen that 83 died within 48 hours. Of the chronic cases, in which death seemed to be due, more to exhaustion than acute septic poisoning, it is very probable that some could have been saved by good nursing and stimulating treatment.

172. It was suggested, that inoculation with prophylactic serum should be tried at least among the officials and police. It seemed very doubtful if any one would submit, and so a supply was not procured. Among the police there were two deaths, equal to a mortality of 1·3 per cent.

173. Taking the aggregate of the four villages at 7,0 00 (certainly not overstated) the number of persons (140) attacked with plague amounts to 2·0 per cent., and the deaths (117) to 1·67 per cent. of the population.

Attitude of the People towards Preventive Measures.

174. About one quarter of the villagers were banias, who had nothing to do but discuss with each other the supposed hardships of the camp life which they had to endure. In consequence, symptoms of discontent from time to time appeared. The Thakur of Kalindri having fled into camp on the first outbreak of the epidemic, there was no one near who possessed sufficient influence to render any assistance. Whenever a difficulty arose the Dewan of Sirohi at once visited the plague district and frequently spent hours in explaining to the people the necessity of the measures that were being enforced. The result was always satisfactory. But the State officers had a difficult part to act, as the villages are in jagir and the Thakur never in any way helped. On the contrary, through his representatives he obstructed operations whenever he could.

175. Finally, I wish specially to refer to the excellent work done by the Sirohi Durbar. On the southern border of the State plague has been prevalent from Palanpore to Deesa. When the latter town became infected, many of the inhabitants fled into the villages around, carrying infection with them. But such was the supervision exercised by the Durbar, that not a single case occurred on the Sirohi side of the border. When it is seen how plague has spread elsewhere, it seems no exaggeration to say, that the vigilance of the Durbar has saved from a general epidemic, not only the State of Sirohi, but the whole of Rajputana. What has been accomplished within the State speaks for itself. In the first week of January, plague appeared in four villages almost simultaneously. To those it was confined; and now that thirty-two days have passed since the last attack, it may be assumed that the epidemic has been completely stamped out.

APPENDIX B.

Shewing the number of deaths on the different days after the onset of the illness.—As some of the more acute were dead before discovered, it is considered more reliable to group together those of the first and second day. It will be seen that after the fifth day, the prognosis is, comparatively, good.

Day of illness.		Number of deaths.	
Within 48 hours.	1st day	58	83
	2nd „	25	
	3rd „	6	
	4th „	9	
	5th „	6	
	6th „	3	
	7th „	1	
	8th „	2	
	9th „	1	
	11th „	2	
	12th „	1	
	14th „	2	
	29th „	1	died from debility following plague.
	TOTAL DEATHS	117	

Total number of cases	140
Percentage mortality	83·57
Percentage of recoveries	16·43
Exclusive of deaths within 48 hours percentage of recoveries	40·35

APPENDIX C.

Combined number of attacks in each caste in the four villages :—

Bania	53
Brahmin	22
Chamar	19
Kunbi	10
Rajput	8
Ghausi	5
Durzi	5
Sutar	5
Lohar	2
Kumbar	2
Raibari	2
Bhil	2
Mali	2
Oil-worker	1
Barber	1
Musalman	1
TOTAL	140

Mortality in each village :—

	Attacks.	Deaths.	Mortality.
Kalindri	84	69	82·14 per cent.
Sheudial	22	19	86·36 „
Teuri	26	22	84·61 „
Wardra	8	7	87·50 „
TOTAL	140	117	

TABLE 15.—*Sex, Age and Caste.*

STATEMENT IV.

		PERCENTAGE OF THE TOTAL TREATED.				
		Men.	Women.	Children.	Hindu.	Musalman.
Ajmere Division	1896	54	17	29	70	26
	1897	53	18	29	71	24
Agency Hospitals and Salt Dispensaries	1896	65	14	21	43	36
	1897	62	15	23	38	43
Native States	1896	53	20	27	67	27
	1897	53	20	27	67	27

176. The above table shows the attendance at hospitals and dispensaries according to sex, age and caste.

177. In the Ajmere Division 53 per cent. of those who attended were men, 29 per cent. children, and 18 per cent. women; in Agency and Salt Revenue Dispensaries 62 per cent. of those who attended were men, 23 per cent. children, and 15 per cent. women, and in Native States institutions 53 per cent. were men, 27 per cent. children, and 20 per cent. women. These figures vary very little year by year; in some places hospitals for women are taking some of the female patients, and these institutions attract also a new class of patients who did not hitherto seek medical aid at the ordinary hospitals and dispensaries.

178. In this Hindu country there is naturally a great predominance of Hindu patients seen at the hospitals and dispensaries, and the exception to this is at the Salt Revenue Dispensaries where more of the employés in that Department are Mahomedans than Hindus, so there were 43 per cent. of the former to 38 per cent. of the latter treated at these dispensaries during the year under report.

TABLE 16.—*Operations.*

* Includes 809 operations performed in the Agency Hospitals and Salt Dispensaries.

179. The above table shows the operations performed in Ajmere-Merwara, in Political Agency and Salt Revenue, and in Native States hospitals and dispensaries in two successive years, according to the new nomenclature of diseases which requires all surgical operations to be returned under one heading and not as major and minor operations.

180. In the Ajmere-Merwara Division 3,463 operations were performed, against 3,242 in the previous year, with only 3 against 9 deaths.

181. Of the operations performed in this division, 1,391 were done in the Ajmere General Hospital, 1,283 in Beawar, 228 in Todgarh, 195 in Kekri, 165 in Deolia, 125 in Pisangan, and 76 in Ramsar Dispensary.

182. At Ajmere and in out-dispensaries 90 extractions of the lens for cataract were performed by Surgeon-Lieutenant-Colonel D. ffrench Mullen, 88·88 per cent. of which were followed by good vision. At Beawar 9 extractions of lens for cataract were performed, 87·50 per cent. of which were followed by good sight. In Ajmere 1 lithotomy and 2 litholapaxies were performed; in Beawar 5 lithotomies with 1 death and 1 successful litholapaxy; there were 57 operations for the removal of diseased bone and 2 amputations performed in Ajmere, and 7 amputations were performed at Beawar; 1 of which was a thigh-amputation and another amputation through the shoulder joint.

183. In the Mission Hospitals at Ajmere 1,059 operations were performed in the ordinary, and 323 in the Women's Hospital; of these 49 and 14, respectively were returned as major and the rest as minor operations in accordance with the old nomenclature of diseases still adhered to in Mission Hospitals.

184. In Native States hospitals and dispensaries there was a slight decrease in operations, *viz.*, 58,541 were performed, against 59,133 in the previous year, and the deaths were also less, *viz.*, 40 against 43 in 1896.

185. There was an increase in the operations performed in 8 States, *viz.*, Oodeypore, Jodhpore, Jaisalmir, Ulwar, Bundi, Kotah, Banswara, and Dungarpore: and a decrease in 11 States, *viz.*, Jeypore, Kishengarh, Bikanir, Sirohi, Bhurtpore, Dholpore, Karauli, Tonk, Shahpura, Jhallawar and Pertabgarh.

186. The slight falling off in surgical operations in the hospitals and dispensaries of the States of Rajputana may to some extent be attributed to plague restrictions which prevented people travelling from long distances to be operated upon when there was no great urgency, also to some of the charges having been without European Medical Officers during part of the year, while there was an unusual demand for them outside Rajputana for employment on the North-West Frontier.

187. There were 1,311 extractions of the lens for cataract performed, against 1,129 in the previous year: 78 against 65 lithotomies, 43 against 49 litholapaxies, 43 against 26 obstetric operations, 117 against 125 amputations, and 6 against no abdominal sections.

188. Seven deaths followed amputations, mostly for gangrenous limbs due to camel bite and other injuries; 3 followed hernia operation complicated with strangulation; 6 occurred after lithotomy, and 1 after litholapaxy, and the others were due to shock, exhaustion, and prolonged suppuration.

189. In Jeypore, Kishengarh and Sambhar, 12,167 operations were performed with 10 deaths. Surgeon-Major P. D. Pank performed the largest number of extractions of the lens for cataract, *viz.*, 582, and most of these were done in the Mayo Hospital, Jeypore; he also performed 4 lithotomies, 16 litholapaxies, and many other important operations.

Assistant Surgeon Daljang Singh, of the Mayo Hospital, Jeypore, heads the Assistant Surgeons in operations, and Assistant Surgeon I. T. Mittra also did good surgical work while in that hospital.

190. In Jodhpore, Jaisalmir and Sirohi, 9,391 operations were performed with 8 deaths, and the most important of these were done in the Hewson

Hospital, Jodhpore. The Residency Surgeon performed 267 extractions of the lens for cataract, 12 lithotomies and 16 litholapaxies, 5 successful radical hernias, and many other important operations. Miss Adams, the lady doctor at Jodhpore, performed 15 extractions of the lens for cataract and many other operations. The Mission Surgeon in that place performed 105 major operations, and 1,372 minor operations besides.

191. In Oodeypore, Pertabgarh, Banswara and Dungarpore, 7,472 operations were performed with only 3 deaths. Most of the important operations were done in the Lansdowne Hospital at Oodeypore and in Bhilwara Dispensary. There is a Mission Hospital at Oodeypore and also an hospital for women; in the Mission Hospital 1,277 operations were performed, 74 of which were returned as major operations. No important operations were done in the women's hospital.

192. In Ulwar 6,686 operations were performed with only two deaths against 5,044 in the previous year; the returns from this State show a most satisfactory increase in surgery. Surgeon-Major Harington, the Agency Surgeon, performed 43 extractions of the lens for cataract and did many other important operations during the year under report. The operations done in the women's hospital there are included.

193. In Bikanir 5,462 operations were performed with 7 deaths; there was a slight falling off in surgery in this State which was due to the Officiating Agency Surgeon's having been taken away for military duty, and to there having been no medical officer in charge for a time.

194. In Bhurtpore 5,534 operations were performed with 5 deaths which is a slight decrease on the previous year's work. The completion of the new hospital is looked forward to, to advance surgery in this State.

195. In Kotah and Jhallawar 5,554 operations were performed with one death, 51 more than in the previous year, and 113 of these were extractions of the lens for cataract done by the Officiating Agency Surgeon.

196. In Deoli Station 332 operations were performed with 3 deaths; most of these were done by the Medical Officer, Deoli Irregular Force.

197. In Karauli 1,774 operations were performed against 2,758 in the previous year, in Tonk 1,481 against 1,898, in Dholpore 888 against 955. The falling off in these States is not explained and only in Tonk has there been a change in the Hospital Assistant.

198. The attention of Medical Officers and Subordinates in charge of institutions where there has been a decrease in surgery, will be drawn to the figures above referred to.

199. Second Class Hospital Assistant Geyan Chand, now in charge of the Rajgarh Dispensary in Ulwar, performed the largest number of important operations among Hospital Assistants, and Second Class Hospital Assistant Polo Ram, of Bikanir, did the largest number of lithotomies in this class.

200. Miss Bessie Karimullah conducted 12 obstetric operations at Kotah, the largest number connected with any one institution during the year under report.

201. Satisfactory progress has been made in surgery in most of the hospitals and dispensaries during the year under report, and the slight falling off in some institutions has been greatly in minor surgery.

202. A larger number of vesical calculi has been removed than in the previous year, and there has been one death less from these operations.

203. Eye surgery, which is one of the most important branches, has made good progress during the year, both in the number of operations performed and in the success obtained.

204. In the Ajmere General Hospital 88·88 per cent. of the extractions of the lens for cataract were followed by good vision, and in Beawar 87·50 per cent. In Oodeypore, Bhurtpore, Jaisalmir, Tonk and Kotah, 100 per cent. of the cataract operations were followed by vision, but only a few selected operations were done at each of these places. In Bikanir 94·44 per cent. of the operations for cataract were successful, in Jhallawar 93·67 per cent., in Abu and Abu Road 92·31 per cent., in Jodhpore 92·28, in Sirohi 88·88 per cent., and in Jeypore 88·35 per cent.; and in the latter places most of the eye surgery recorded for the year was done.

205. Abscess of the liver has been more successfully and more frequently treated by operation during the year, than hitherto, and conservative surgery has been more generally applied to bone diseases.

TABLE 17.—*Surgical Operations for Mycetoma.*

NAME OF OPERATION.		Number.
Amputations	Thigh	2
	Leg	22
	Foot	5
Excision of soft parts		67
	TOTAL	96

206. The above table shows the operations performed for Mycetoma during the year. Many of these have been excisions of soft parts where the disease has been met with in the early stage when it could be successfully dealt with in this way and the limb saved.

There were 29 amputations and 67 excisions of soft parts performed against 39 amputations and 76 excisions in the previous year. The disease belongs to the sandy desert; 45 of the operations were performed in Marwar, 33 in Bikanir, 8 in Jeypore, 4 in Beawar, 3 in Meywar, 1 in Ajmere, 1 in Jaisalmir and 1 in Deoli. The light variety was as usual much less frequently met with than the dark, and the lower extremities only were attacked on this occasion.

TABLE 18.—*Selected List of Surgical Operations showing the number of each performed by individual officers in Rajputana during the year 1897.*

207. The above table shows the important operations performed by each Medical Officer, Lady Doctor, Assistant Surgeon and Hospital Assistant during the year under report. This table has been classified in accordance with instructions laid down in letter No. $\frac{27 \text{ Medical}}{970-979}$, dated 30th October 1896, from the Government of India, Home Department, to all Local Governments and Administrations, and many operations hitherto shown have been omitted on account of their being of comparatively less importance than those under the headings now given.

TABLE 19.—*Expenditure.*

	Cost per diet per diem	22	26	

* Includes R257-8-5, paid towards the liquidation of debit balance against the Kekri and Todgarh Dispensaries, *vide* remarks on Statement V, Part I.

208. In the Ajmere Division the expenditure on hospitals and dispensaries fell from R11,445 in 1896 to R10,757 in the year under report. There was a considerable decrease in the expenditure on buildings and repairs and on miscellaneous charges as the Ajmere General Hospital had recently been completed and fitted out, and heavy charges on this account had been included in last year's statement. There was an increased expenditure on diets, partly on account of high prices and partly on account of extra food having been given to surgical cases.

209. The percentage of the total cost paid by Government fell from 51 to 50, a very slight fluctuation, as there were few extraordinary expenses during the year under report to be drawn from the dispensary fund, and as the salaries and cost of Europe medicines paid by Government remained about the same as in the previous year.

The invested capital of these dispensaries remained the same as hitherto.

210. There was a slight increase in expenditure on establishment and diets in the Ajmere General Hospital, and a slight decrease in the cost of medicines, but the principal feature of the statement of this hospital is the decrease of R309-4 in expenditure on buildings. The subscriptions both from Europeans and Natives decreased somewhat, and the floating cash balance fell from R563 to R534.

211. The financial condition of Kekri, Pisangan, Deolia and Ramsar Dispensaries is now satisfactory, the debt of Kekri Dispensary has been completely liquidated during the year under report, and a credit balance of R60 shown in the account.

212. There was a slight increase in expenditure in Beawar and Todgarh Dispensaries on medicines and diets. The Beawar Dispensary closed with a credit balance of R1,313-8-2, and the outstanding debt on Todgarh Dispensary was reduced during the year from R364-13-0 to R238-0-3.

213. The expenditure on Political Agency and Salt Revenue Dispensaries fell from R11,158 to R10,000. The charges for Europe medicines were less as the old stock in hand was considerable, no diets were supplied and little was required for repairs during the year. These dispensaries are entirely supported by Government.

214. The expenditure on Abu and Abu Road Dispensaries rose from R1,699 in 1896 to R1,962 in 1897 on account of extra medicines and diets supplied, but the expenditure was necessary as the attendance was greater and more people required diets than in a year of low prices. The subscriptions to these dispensaries fell slightly; however, the invested capital remained the same, and they are financially satisfactory. These dispensaries are partly supported by Government and partly by contributions collected at Mount Abu. The Sirohi Durbar provides a free house for the Abu Road Dispensary and has recently consented to contribute a local allowance of R10 per mensem to the Hospital Assistant in charge.

215. The expenditure on hospitals and dispensaries in the States of Rajputana rose from R2,99,326 in 1896 to R3,12,828 in the year under report, and the increase was mainly due to the opening of new dispensaries and the enlarging of old institutions.

216. There was an increase in expenditure under all headings except buildings and repairs, under which there was a considerable decrease when compared with that of the previous year. In 1896 there had been an unusual expenditure on the Bhagwan Dass Hospital in Bikanir City, and although considerable

additions have been made to old hospitals and some new ones built, the expenditure on this account was on a smaller scale in 1897 when compared with that of the previous year.

217. Of the total sum above shown, R59,291 were expended in Jeypore State, R55,576 in Jodhpore, R38,918 in Bikanir, R26,018 in Oodeypore R23,545 in Ulwar, R22,299 in Sirohi, R21,473 in Kotah, R17,966 in Bhurtpore, R15,176 in Jhallawar, R6,563 in Tonk, R5,169 in Dholpore, R4,570 in Karauli, R2,483 in Jaisalmir, R2,469 in Bundi, R1,505 in Banswara, R1,482 in Kishengarh, R1,290 in Partabgarh, R1,189 in Dungarpore, and R1,168 in Shahpura.

218. The expenditure in Sirohi State was unusual on account of the completion of the Crosthwaite Hospital, it was also great in Jodhpore on account of the new wing added to the Hewson Hospital, and there was an increase in Jhallawar on account of a new dispensary opened in that State.

219. The expenditure in Dholpore State does not include the cost of the new hospital recently opened at the capital there as this sum has never been shown in the hospital accounts.

220. The expenditure on the one dispensary in Bundi in charge of an unqualified practitioner was unusually great, and a well-equipped institution in charge of a qualified Hospital Assistant might be kept up at less cost under proper management.

221. The expenditure on the small dispensary at Kushalgarh which is in charge of an unqualified practitioner is now shown separately.

222. The average cost of each case treated in Ajmere-Merwara fell from 38 pies in 1896 to 33 pies in the year under report, and in Political Agenc and Salt Revenue Dispensaries from 91 to 82 pies. In Native States there was also a reduction in the cost of each case treated when compared with the previous year, *viz.*, from 64 to 62 pies.

223. The cost of hospital diets rose in both Ajmere-Merwara and in Native States, *viz.*, in the former from 22 to 25 pies per head per diem. This was due to a better scale of diet given to patients who had undergone surgical operations and to high prices of food stuffs. No diets were supplied to in-door patients in Political Agency and Salt Revenue Dispensaries.

Mission Hospitals.

224. There are five Mission Hospitals in Rajputana, *viz.*, two at Ajmere, one at Nasirabad, one at Oodeypore and one at Jodhpore.

225. In the Mission Hospital at Ajmere, 19,981 new out-door patients were treated, the re-attendance or old cases treated numbered 49,747, and the in-door patients 117; there were 1,059 operations performed, 49 of which have been described as major operations under the old nomenclature of diseases. In the Women's Hospital at Ajmere, 4,100 new cases were treated, the old cases or re-attendance numbered 6,785, the in-patients 86, and the operations 323, of which 14 have been described as major operations. Besides, 2,806 visits were paid by the hospital staff to people at their houses, and medicine or medical advice given. In Nasirabad 9,110 new out-door cases were treated, the old cases or re-attendance numbered 17,242, the in-door patients 209 and the operations 803, of which 44 have been described as major operations. In Oodeypore 13,913 new out-door patients were treated, the old cases or re-attendance numbered 41,021, the in-patients 397 and the operations 1,277, of which 74 have been described as major operations. In Jodhpore 7,294 new patients were

treated, the old cases or re-attendance numbered 32,967, the in-patients 109, and the operations 1,477, of which 105 have been returned as major operations under the old nomenclature.

226. Much good work continues to be done in these hospitals and the Women's Hospital is specially useful to the people as it is the only institution in Ajmere where *purdah-nashins* can be properly treated.

Railway Hospitals.

227. There are six Railway Hospitals on the Rajputana-Malwa Railway, within the limits of Rajputana, *viz.*, one at Abu Road, one at Sojat Road, two at Ajmere, one at Phalera, and one at Bandikui.

228. During the year under report 24,558 patients were treated in the above hospitals and 308 operations performed. In Abu Road Hospital 2,206 patients were treated and 75 operations performed, in Sojat Road 7,394 patients were treated and 88 operations performed, in Ajmere 8,882 patients were treated and many minor operations performed, and in Phalera 2,138 patients were treated. Besides the people employed on the Railway, some of the villagers adjacent also receive medical aid, and this should be encouraged as it is of great advantage to the public and enables the Railway Medical Officers and subordinates to acquire experience.

Inspections.

229. All the hospitals and dispensaries at head-quarter stations were inspected by the Administrative Medical Officer, also the institutions at Tonk, Bundi, Shahpura, Dholpore and Karauli.

Sale of Quinine.

230. During the year 1897 quinine was sold at 133 against 132 post offices in 1896. The total sales effected amounted to 460 packets of 102 powders each, equal to 46,920 doses of five grains each, against 36,618 doses of five grains each in the previous year.

231. The largest quantity disposed of was in Meywar, where 163 packets, equal to 16,626 doses of five grains, were sold; in Jodhpore, 129 packets, equal to 13,158 doses of five grains, were sold.

232. The largest sales were effected in towns near Railway stations and the drug is not yet much appreciated by the ordinary villager remote from a dispensary town where it can be got free of charge; it has, however, been decided to continue the sale of quinine for a further period as it is not attended by any expense beyond the original permanent advance of two packets to each post office, which has already been paid for by the various Durbars concerned in the sales.

Section III.—JAILS.

Table 20.—*Cases and Deaths.*

		Number of Jails.	Average number of prisoners of all classes.	Cases in hospital.	Daily average sick.	Deaths.	Average duration of cases in days.	Percentage of deaths to cases.	Death-rate per thousand prisoners per annum.				
									Total.	*Quarters of the year.*			
										First.	Second.	Third.	Fourth.
Ajmere Division	1896	1	301·77	69	4·25	4	22	5·80	13·26	26·52	...	...	26·52
	1897	1	292·52	79	4·33	2	20	2·53	6·84	13·68	...	...	13·68
Native States	1896	20	4,792·23	5,750	225·55	135	14	2·35	28·17	31·72	14·20	33·83	35·88
	1897	20	4,919·73	5,888	124·95	116	8	1·97	23·58	12·16	14·64	27·64	39·84

The number of sick remaining on 31st December 1896 has been included.

233. The above table shows the number of jails in Rajputana, the average number of prisoners, the average sick and the death-rate *per mille* for two years in succession.

234. In Ajmere Jail the daily average number of prisoners fell from 301·77 in 1896 to 292·52 in 1897, and the average daily sick rose from 4·25 to 4·33, while the deaths fell from 4 to 2 giving a death-rate of 6·84 *per mille* against 13·26 in the previous year. The cases treated in hospital rose from 69 in 1896 to 79 in the year under report. There were 2·53 per cent. of deaths to cases, and these deaths occurred in the first and fourth quarters, *viz.*, one in each.

TABLE 21.

YEAR.	PRICE OF WHEAT PER RUPEE.		AJMERE DIVISION.		NATIVE STATES.	
	Seers.	Chittacks.	Average number of prisoners.	Death-rate per thousand.	Average number of prisoners.	Death-rate per thousand.
1893 . .	12	13	337·10	11·87	4,558·67	32·03
1894 . .	14	1	333·10	18·01	4,383·42	28·29
1895 . .	13	6½	330·78	45 35	4,556·76	28·09
1896 . .	9	8	301·77	13·26	4,792·23	28·17
1897 . .	8	12	292·52	6 84	4,919·73	23·58

235. The above table shows the average price of wheat for five years and the average prisoners in Ajmere-Merwara and in Native States Jails, as well as the death-rates *per mille* of population.

236. The mortality in Ajmere Jail has been unusually low during the year under report, little more than half that of the previous year which was also a year of very low mortality. The difference in mortality in the jail and city of Ajmere is very marked, and it speaks well for Surgeon-Lieutenant-Colonel D. ffrench-Mullen's management of this large prison where the death-rate is hardly one-fifth that of the outside population.

TABLE 22.—*Causes of Admissions and Deaths.*

STATEMENT III.

		PERCENTAGE TO THE TOTAL CASES AND DEATHS.									
		Malarial fevers and spleen.	Cholera.	Rheumatism.	Diseases of the eye.	Lungs and respiratory diseases.	Dysentery and diarrhœa.	Ulcers.	Skin diseases.	Injuries.	All others.
						Cases.					
Ajmere Division .	1896	19	...	...	1	12	9	...	14	7	38
	1897	37	...	...	1	8	11	...	1	8	34
Native States .	1896	21	·49	4	2	10	14	7	5	2	34
	1897	27	·17	3	2	9	14	5	5	2	33
						Deaths.					
Ajmere Division .	1896	...	...	...	...	25	...	...	...	...	75
	1897	...	...	...	...	50	50	...	...	...	...
Native States .	1896	9	8	1	...	26	33	1	1	...	21
	1897	6	4	2	...	26	38	·87	...	4	19

237. The above table shows the percentage of admissions from different diseases contrasted with the previous year.

238. In Ajmere Jail malarial fevers and spleen diseases gave rise to 37 per cent. of the total treated, and to no deaths against 19 per cent. of the total treated and no deaths in the previous year. Lungs and respiratory diseases gave rise to 8 against 12 per cent. of the total treated and to 50 against 25 per cent. of the deaths. Dysentery and diarrhœa gave rise to 11 against 9 per cent. of the cases treated and to 50 per cent. of the deaths. Of the two deaths which occurred in this jail in 1897, one was from pneumonia and the other from diarrhœa. There was only 1 per cent. of eye diseases among the treated in hospital, skin diseases fell from 14 to 1 per cent. of the total treated, and no cholera occurred in Ajmere Jail in either year referred to.

239. The health of the prisoners in Ajmere Jail was better than in Native States Jails, and the death-rate was also lower than in most of these jails; the health of the prisoners has been remarkably good and the death-rate remarkably low when compared with that of the outside population.

Native States Jails.

240. Returns have been received from twenty jails in Rajputana States as in the previous year.

241. The daily average number of prisoners in these jails rose from 4,792·23 in 1896 to 4,919·73 in 1897, and the total number treated in hospital rose from 5,750 to 5,888; however, the ailments met with were slighter than in the previous year, and the daily average sick fell from 225·55 to 124·95, and the deaths from 135 to 116; the death-rate was 23·58 against 28·17 *per mille* in 1896.

242. Seven jails had a higher mortality than in the previous year, *viz.*, Kishengarh, Ulwar, Dholpore, Karauli, Tonk, Pertabgarh and Banswara.

243. Malarial fevers and spleen diseases gave rise to 27 per cent. of the total sickness, against 21 per cent. in the previous year; lung and respiratory diseases to 9 against 10 per cent., and dysentery and diarrhœa to 14 per cent. as in 1896. Malarial fevers and spleen diseases caused 6 against 9 per cent. of the total deaths, dysentery and diarrhœa 38 against 33 per cent., injuries 4 per cent. against nothing, and lung and respiratory diseases 26 per cent., as in the previous year.

244. There were 10 cases of cholora, *viz.*, 5 in Dholpore and 5 in Ulwar, and 5 of these proved fatal, *viz.*, 2 in the former and 3 in the latter State, making 4 per cent. of the total deaths from this disease against 8 per cent. in the previous year.

245. No deaths were reported from Sirohi, Jaisalmir, Bundi, or Dungarpore Jails; the death-rate *per mille* of population in the Bikanir Jail was 5·77, in Jeypore 8·34, in Jodhpore 10·82, in Kishengarh 14·35, in Shahpura 24·81, in Ulwar 26·03, in Tonk 28·87, in Karauli 30·89, in Bhurtpore 33·05, in Jhallawar 33·72, in Kotah 35·68, in Oodeypore 37·32, in Pertabgarh 88·17, in Dholpore 127·20, and in Banswara 174·41.

246. The death-rate in Banswara Jail was again by far the highest recorded in Rajputana States; the jail of this State is badly situated and badly planned. The death-rate in Dholpore and Pertabgarh Jails has been very high, and the jails of these States are old and badly constructed.

217. There has been overcrowding in both Oodeypore and Jhallawar Jails, and the death-rate has been excessive. In both Kotah and Bhurtpore the death-rate has been high, although the jails of these States are in good order; the excessive mortality in these jails can only be attributed to climate.

218. A new jail will shortly be completed at Kishengarh where it is much needed.

249. Steady progress is being made in jail management in Rajputana States, and most of the jails are in good order. The water-supply, the food and the vegetable gardens of jails, are all receiving more attention than hitherto. A few of the old jails are, however, still very defective in drainage, construction and management, and in some States there is still much overcrowding of prisoners, and these defects require early remedy, and are regularly brought to the notice of the authorities at the annual inspections.

250. The Administrative Medical Officer inspected the jails at Ajmere, Oodeypore, Jodhpore, Jeypore, Bhurtpore, Ulwar, Bikanir, Kotah, Tonk, Jhallawar, Bundi and Shahpura, the Residency Surgeon, Western Rajputana States, inspected the Sirohi and Jaisalmir Jails; the Residency Surgeon, Meywar, the Banswara, Pertabgarh and Dungarpore Jails; and the Residency Surgeon, Jeypore, the Kishengarh Jail.

251. Everything requiring remedy was pointed out at these inspections and many improvements were sanctioned which will be carried out as far as possible during the current year.

252. The necessity for regular inspection of jails away from head-quarters was impressed upon Medical Officers in my last report, so it is satisfactory to note that no jail has been left out during the year under report; and progress in jail management cannot be expected in backward States unless attention be drawn to defects during visits of inspection.

Qualified Medical Staff.

253. There are 8 Commissioned Medical Officers employed in Rajputana besides the Military Medical Officers, *viz.* 3 Residency Surgeons at Jodhpore, Oodeypore and Jeypore, 2 Agency Surgeons at Ulwar, and Kotah and Jhallawar, 2 Civil Surgeons at Ajmere and Bikanir, and 1 Medical Officer on special duty at Bhurtpore, whom it is proposed to make Agency Surgeon of the Eastern Rajputana States. Besides these, 3 Medical Officers have been temporarily employed on plague duty.

254. The Civil Surgeon, Ajmere, is Medical Officer of the Merwara Battalion, the Medical Officer, Abu Sanitarium, is Civil Surgeon of Mount Abu, the Medical Officer of the Deoli Irregular Force is Agency Surgeon, Haraoti and Tonk Agency, the Medical Officer of the Meywar Bhil Corps superintends the civil dispensaries of Kherwara and Kotra, and the Medical Officer, Erinpura Irregular Force, inspects the Sheogunge Dispensary adjacent to the Cantonment of Erinpura.

255. One Surgeon Captain and 1 Surgeon-Lieutenant of the Indian Subordinate Medical Department, 2 Assistant Surgeons, 2 apothecaries and 1 private medical practitioner have been employed on plague duty temporarily.

256. One Assistant Surgeon is permanently employed at Beawar, 3 at Jodhpore, 3 at Jeypore, and 1 at Jhalrapatan, and arrangements are being made to obtain the services of 2 others from Government for Bikanir and Bhurtpore.

257. There are 9 permanent Hospital Assistants employed in Ajmere-Merwara, 10 in Political Agency and Salt Revenue Dispensaries, 2 in Abu and Abu Road Charitable Dispensaries, and a reserve of 3 to act for the above from time to time. There are 113 Hospital Assistants in permanent appointments in Native States, and a reserve of 13 more to act temporarily for them. There are still 19 Local Class Hospital Assistants employed, *viz.*, 6 in Jeypore, 7 in Bhurtpore, 2 in Meywar, 2 in Dholpore, and 2 in Bikanir. Besides these there are 11 Local Class Native doctors who were locally entertained by the different States in Rajputana, *viz.*, 6 in Bhurtpore, 1 in Meywar, 1 in Marwar, 1 at Bundi, 1 at Dungarpore, and 1 at Kushalgarh. It is hoped that these Local Class Native doctors will shortly be replaced by qualified men from the Reserve List

258. There are 8 Hospital Assistants employed with the Imperial Service Troops of Rajputana, and 8 Civil Hospital Assistants lent temporarily from other provinces for plague duty.

259. Considerable difficulty has been experienced in keeping up the necessary reserve of Hospital Assistants. The 6 pupils annually sent to the Agra Medical School are not sufficient to meet the demands for Hospital Assistants in Rajputana, and there is frequently a want of candidates for vacancies as pupils who qualify privately do not always offer themselves in sufficient numbers.

260. Four lady doctors and 11 female Hospital Assistants are at present employed in Rajputana—particulars of these are given in another page. There is considerable difficulty in obtaining qualified female Hospital Assistants for the appointment, and an independent charge has been vacant at Karauli throughout the year as no one will accept it on the pay offered, *viz.*, ₹40 per mensem.

Imperial Service Troops.

261. The four regiments of Imperial Service Cavalry in Jodhpore, Ulwar and Bhurtpore, the Bikanir Camel Corps, the Jeypore Transport Corps, and the two regiments of Imperial Service Infantry, have all got good, well-equipped hospitals which have been regularly inspected by the Administrative Medical Officer; the recruits of this force have also been inspected from time to time and found to be of good physique.

262. The Jodhpore Imperial Service Cavalry and the Jeypore Transport Corps were employed during the recent rising on the North-West Frontier. On the 16th, 17th and 18th of September 1897, one regiment of the Jodhpore Imperial Service Cavalry was railed to Rawal Pindi to take part in the expedition, and did not return to Jodhpore till the end of January. Maharaj Colonel Sir Pertab Singh, G.C.S.I., 3 other officers and 33 men went off for employment on the staff a week earlier, and returned a few days before the main body of the regiment.

263. The main body of the regiment consisted of 21 officers, 1 Assistant Surgeon in medical charge, 521 men, 375 syces and servants, and 13 hospital servants, including dooly-bearers.

264. Twelve men were invalided back to Jodhpore, *viz.*, 2 suffering from dysentery, 1 from debility, 3 from venereal disease, from asthma, 1 from orchitis consequent on injury, and 4 from malarial fevers. One officer was shot dead by the enemy while engaged in the Tirah Expedition.

TABLE A.—*Showing particulars of health of Jodhpore Imperial Service Troops, who took part in the North-West Frontier Expedition, 1897.*

DISEASES.	FEROZPORE.		RAWAL PINDI.				TOTAL.	REMARKS.

TOTAL	75	41	128	159	104	63	570	New cases.

DEATHS.—One officer killed in action.

265. The above table shows the sickness and invaliding among the Jodhpore Imperial Service Troops employed with the Expedition and in the Reserve at Rawal Pindi.

266. Assistant Surgeon Prasanna Coomar Ghose was in medical charge of the regiment throughout its absence from Jodhpore and discharged his duties satisfactorily.

267. The regiment returned to Jodhpore in excellent health and condition at the conclusion of the frontier operations. The men are all young and well selected for cavalry purposes, they stood the change of climate well, and were looking better on their return than when they left Jodhpore.

JEYPORE TRANSPORT CORPS.

268. The Jeypore Transport Corps left Jeypore on the 7th September 1897 to take part in the North-West Frontier Expedition, and remained away till the conclusion of the operations.

Total strength—770.

Hospital Staff.—One Assistant Surgeon, 1 Hospital Assistant and 14 servants, including dooly-bearers.

269. The entire Transport Corps reached Shinwari *viâ* Kohat on the 19th October 1897, and had much difficult work throughout the expedition. Thirty men were invalided back to Jeypore on account of illness, principally due to local injuries, diarrhœa, dysentery and fever; 12 were shot dead by the enemy, 17 died from disease or injury other than gunshot wound, and 3 were crushed by vehicles, but recovered.

TABLE A.—*Showing the diseases of In-door patients, treated in the Jeypore Imperial Service Transport Corps Hospital on active service with the Tirah Expeditionary Force for the months of September, October, November and December 1897.*

DISEASES.	NEW CASES ADMITTED.				RESULT.			REMARKS.
	September.	October.	November.	December.	Cured.	Died.	Discharged otherwise.	
Dysentery	2	37	2	...	39	2	...	
Fever	16	31	11	...	58	...	..	
Worms	...	2	...	...	2	...	...	
Lungs	...	5	...	...	4	1	...

Skin	1	...	...	...	1	...	...	
Ulcer	3	1	...	...	4	...	...	
Local injury	6	8	1	..	12	...	3	Sent to Jeypore.
TOTAL	29	84	14	...	120	3	4	

NOTE—In-door patients' treatment was stopped from the 7th November 1897, and the patients were sent to General Native Field Hospital as per verbal order of the Senior Medical Officer at Camp Kai.

270. The above table shows the diseases of in-door patients in the Jeypore Imperial Service Transport Hospital with the Tirah Expeditionary Force up to the 7th of November, when the sick of the corps were sent to the Native Field Hospital.

Dysentery and malarial fevers were the most common ailments, and there were several injuries caused by transport carts and animals; the proportion of lung diseases was considerable on account of the great exposure and severity of the weather.

TABLE B.—*Showing the diseases of Out-door patients, treated in the Jeypore Imperial Service Transport Corps Hospital on active service with the Tirah Expeditionary Force, during the months of September, October, November and December 1897.*

DISEASES.	NEW CASES, MONTHLY ATTENDANCE.				
	September.	October.	November.	December.	TOTAL.
Dysentery	28	180	158	63	429
Fever	133	336	106	54	629
Primary Syphilis	...	...	3	...	3
Debility	1	1	8	4	14
Rheumatic affections	1	1	...	1	3
Eye	17	2	4	3	26
Ear	...	2	2	...	4
Nose	...	2	...	...	2
All other general	5	42	35	7	89
Nervous	1	4	...	...	5
Lungs	...	5	3	12	20
Other respiratory	6	13	2	34	55
Dyspepsia	17	73	28	25	143
Diarrhœa	2	4	...	...	6
Spleen	1	...	...	...	1
Ulcers	36	45	25	28	134
Local injury	9	16	...	2	27
Lymphatic system	...	...	1	...	1
TOTAL	257	726	375	233	1,591

271. The above table shows the minor ailments suffered from, which did not necessitate confinement to bed for long periods, nor going into hospital Most of these were mild malarial fevers, slight attacks of dysentery, dyspepsia, and ulcerations, principally shoe abrasions.

STATEMENT C.—*Showing the number of men killed, wounded and died from the Imperial Service Jeypore Transport Corps on active service with the Tirah Expeditionary Force.*

NAMES.	Rank.	No. of Troop.	Camp.	Killed.	REMARKS.

Jagannath	Do.	..	Bagh	1	
Haidar	Blacksmith	...	Kohat	1	Phthysis.
	Total number of men died of disease			17	

272. The above table shows the numbers killed and wounded and also those who died among the Jeypore Imperial Service Transport Corps while employed on active service with Expeditionary Force. This table shows a considerable fatality both from the enemy's bullets and from disease.

273. Assistant Surgeon Daljang Singh Khanka, M.B., was in medical charge of the corps throughout the expedition and did excellent work; Hospital Assistant Nur Masih performed his duties very satisfactorily under the Assistant Surgeon.

274. These troops are all young men and they stood the change of climate and hardships of the campaign well.

Female Hospitals and Education of Women.

275. *Ajmere.*—Miss Campbell continues to superintend the Mission Hospital for women at Ajmere. Much excellent work has been done by this lady and her subordinates during the year both in the hospital and in the houses of the people. The number of patients treated and the other medical work done is shown under Mission Hospitals.

276. *Beawar.*—Female Hospital Assistant Champa Bai has been in charge of the Beawar Dispensary for women throughout the year; 7,917 out-patients and 30 in-patients were treated; 4 obstetric operations were performed in the town, and 106 women were visited at their own houses free of charge, and forceps were applied in two instances by this Hospital Assistant. The hospital was closed during a great part of last year, so comparisons are not possible; however, good work is being done by this Female Hospital Assistant.

277. *Ulwar.*—Miss Dissent, M.D., has been in charge of the Lady Dufferin Hospital throughout the year and has done excellent work in it; the two Female Hospital Assistants attached to it have worked well under her, and the institution is yearly becoming more popular and better attended. During the year under report 11,787 in and out-door patients were treated and 2,504 operations performed, against 11,012 in and out-door patients and 1,499 operations performed in the previous year. Of the patients treated, 1,632 were *purdah-nashins*, against 1,396 of the same class in the previous year. Six new wards, an operating room and servants' quarters have been added to this hospital; the new wing has been named the Lady Elgin Wing.

278. Miss Dissent has resigned her appointment at Ulwar and Miss Lauder has succeeded her there.

278. *Jodhpore.*—Miss Adams, M.D., has been in charge of the Jaswant Hospital at Jodhpore throughout the year. There were 6,283 in and out-door patients treated, and 627 operations performed in this hospital. Miss Adams visited many *purdah nashin* ladies at the palace and at their own houses in addition to those treated in hospital. A Calcutta qualified Female Hospital Assistant was appointed early in the year to assist Miss Adams, but she would not remain at Jodhpore although a good salary and well-furnished quarters were provided for her. A qualified nurse has recently been appointed to reside in the hospital, and she gives valuable assistance. Another Female Hospital Assistant has recently joined the staff of this hospital.

279. *Oodeypore.*—Miss Perry held charge of the Walter Hospital at Oodeypore till the end of November 1897, when she was relieved by Miss Graham, who is now Superintendent of the institution. A Female Hospital Assistant has recently joined for duty under Miss Graham, so it is hoped more work will now be done. There has been a considerable decrease in attendance, *viz.*, 3,398 in

and out-door patients have been treated, against 3,506 in the previous year, and only 57 operations have been performed in twelve months.

280. *Tonk.*—Miss Bose, M.B., superintended the Walter Hospital at Tonk for a short time during the early part of the year, and then proceeded on leave at the expiration of which she obtained a transfer. The Tonk Female Hospital Assistant was allowed to carry on the duties till the 27th of October when Miss DeSouza took over charge. During the year 3,692 in and out-door patients were treated, and 220 operations performed.

281. *Bhurtpore.*—The female dispensary in Bhurtpore City has been in charge of Bibi Rup Kuar, and she has done excellent work in it; during the year 10,079 in and out-door patients were treated, and 196 operations performed in this dispensary.

282. *Kotah.*—Miss Bessie Karimullah has been in charge of the Victoria Hospital at Kotah throughout the year, and has done much good work in it; there were 8,173 in and out-door patients treated, and 718 operations performed in 1897. It is one of the finest hospitals in Rajputana and it is to be regretted that it is not in charge of a highly qualified superintendent.

283. *Bikanir.*—The female wing of the Bhagwan Dass Hospital in Bikanir City has been in charge of Female Hospital Assistant Bibi Ashrafi throughout the year; *purdah-nashins* and other women who do not wish to go into the male wing of the hospital, are treated in this detached building which is very private and well adapted for female patients. Separate returns for the female branch of the above hospital have not been furnished.

284. *Jeypore.*—It is much to be regretted that there is no Women's Hospital at Jeypore and no well-qualified lady doctor whom the *purdah-nashin* ladies of Jeypore could consult. It is hoped something will shortly be done to remove this blot from the administration of an otherwise very advanced State. A Female Hospital Assistant has been employed in the women's ward of the Mayo Hospital, Jeypore, throughout the year, and a Second Female Hospital Assistant of that State has been on plague inspection duty at Bandikui. Separate records for the female department of the hospital have not been furnished.

285. Mrs. Ives, a qualified nurse, is still employed in the Sirohi palace, but she has no opportunity of working among the towns people.

286. *Karauli.*—The Karauli Dispensary for women is still closed as no qualified practitioner can be obtained to take charge of it on the salary offered. Negotiations are now being carried on to have this dispensary r-eopened early.

287. There are at present three vacancies for Female Hospital Assistants in Rajputana, but there is little chance of being able to fill them till some of the practitioners on plague duty throughout the country are relieved.

288. The Jodhpore, Jeypore and Bikanir Durbars are educating a female pupil each at the Agra Medical School at present. There were two other girls entered on scholarships founded in the Agra Medical School by the late Maharaja Jaswant Singh, G.C.S.I., of Jodhpore, but one of these attempted suicide and had to be dismissed and the other was withdrawn by her relatives.

289. There is in the first place great difficulty in finding girls in Rajputana with sufficient education to enter the Agra Medical School, and secondly it is nearly impossible to get those who enter to attend the course and qualify, consequently we must rely on other provinces for most of our female practitioners for some years to come.

290. Two girls from Ulwar qualified as maternity nurses during the year and *dhais* have been instructed by some of the Lady Doctors to enable them to work scientifically among the people ; however, as most of these are quite illiterate their instruction is no easy task.

291. Medically qualified women could not be obtained for the plague inspections on the platforms at Abu Road and Ajmere, so maternity nurses have been utilised for this duty which has, however, been satisfactorily performed by them.

A. ADAMS., *M.D.*, *Surgeon-Lt.-Col.*,
Administrative Medical Officer
in Rajputana.

ABU ;
The 15th July 1898.

38·49	37·58	38·04	...	...	.....			
38·45	34·43	35·14	683 0 0	6,879 8 8	*Nil*	*Nil*	*Nil*	Strict supervision made and every precaution taken during the year. Introduction of moveable latrines is under contemplation. They have lately been supplied for servants in private Bungalows. A nullah which carries off surface water has been paved and made more satisfactory.
36·27	37·01	36·62	...	569 13 8				
36·67	34·64	35·72						
27·26	25·93	26·63	...	...	During the year 1897 there were apparently no defects and no measures were therefore taken to remedy them.	The feeder of the large tank was repaired and improved by the village Shamlat at a cost of R6-8.	A sweeper was added to the existing staff of sweepers at a monthly wage of R4 for general conservancy.	Metalled roads are being gradually made. Kutchee drains are being constructed in the bye-lanes.

When prisoners of different classes are confined in the same jail, the expenditure on establishment and other items with which all are concerned should be divided over all. The cost per head under any item of expenditure is to be calculated on prisoners actually concerned in it or contributing to it, and not otherwise.

Hospital charges, column 7, should include rations and also the cost of medicines supplied both from the bazar and Medical Store Depôts. In this series (Financial) annas and pies are to be shown where there are columns for them.

STATEMENT XII (FINANCIAL).—*Showing the net Cash earnings of convicts sentenced to labour in the Central Jail at Ajmere during the year 1897.*

1	2	3	4	5	6	7	8	9	10	11	12	13	14
Serial No.	NAME OF JAIL.	Average number sentenced to labour.	Average number employed in Jail manufactures.	Cash balance on manufacturing account in hand on the 1st January 1897.	Cash drawn on manufacturing account during the year.	Total.	Paid into Treasury on manufacturing account.	Cash balance in hand on manufacturing account on the 31st December 1897.	TOTAL.	Cash earnings (being total of column 10 less total of column 7).	Average earnings per head calculated on column 3.	Average earnings per head calculated on column 4.	REMARKS.
